Appendix 2: qualitative comments	91

Basis of preparation

Overview of basis of preparation

Within the scope of our work, we have focused on the assessment of the Target's quality. We have carried out a deep analysis on IEBS brand awareness, students perception (overall and factor by factor), competitive positioning, price and discounts performance and we have identified differences by type of program, field of study and student nationality and profile

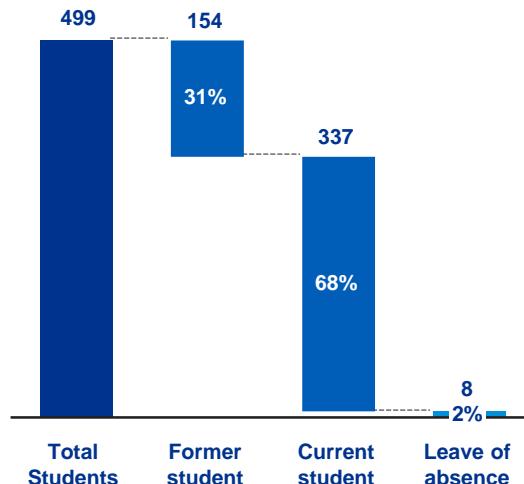

The team has had access to the company management for kick-off on September 9th. The primary source of information has been the defined survey targeted to both current and former IEBS students. The survey has been distributed by IEBS to a wide student database (7,669 students)

At the date of this report, the survey is closed as we have already been provided with sufficient information to corroborate our key findings and recommendations

Key sources of information

The key source of information for this project has been a deep students survey. Main considerations regarding the survey:

- The survey has been initially defined by Permira and later adjusted consensually by KPMG
- The survey has been programmed by an external KPMG provider
- The survey has been targeted to IEBS students
- The student database is composed by IEBS current students and Alumni. This database is composed approximately by 7,669 students
- The survey has been distributed by IEBS to the accorded student database

Other items to consider

- For the purpose of our analysis, we have focused our work on those areas that were indicated by the client as being of most relevance, as stipulated in the scope of work
- The content of this report has not been reviewed by the management team of the Company

Executive summary

Executive summary

Online postgraduate education is growing as it provides advantages for obtaining a master degree, contributing to professional growth

Context of online postgraduate education

- **Master programs** increase perspectives of **better salary and employability** with **private online courses becoming the most attractive alternative**, as it provides key advantages such as:
 - Flexibility to combine training and working
 - Access to a wider array of programs
 - Typically lower pricing and more flexible payment conditions

Business Overview

- **Master programs** increase perspectives of **better salary and employability** with **online courses becoming the most attractive alternative**, as it provides advantages such as flexibility, wider program access and better pricing
- IEBS seems to **cater online courses for experienced professionals** interested in **combining business training with their professional career**, attracting students not only from Spain but largely from Latin American countries
- IEBS offers courses across **five major business fields**, with prevalence of **Business & Tech and Marketing**, and completed with Entrepreneurship, Social Media and Human Resources programs. They offer a wide variety of programs but **Master and Postgraduate programs seem to be more demanded** than shorter courses
- IEBS seems to have **evolved** from a specialized school (finance, marketing entrepreneurship and innovation) **towards a more comprehensive Business School**, although with an relevant **focus on tech and innovation**
- As a pure online player, IEBS focuses clearly on obtaining **leads from online channels** where they seem to keep a very **effective positioning**. Referrals are still relevant for generating leads, and given the NPS probably more important for the actual enrolment
- IEBS students **main motivation** to take a course are related to professional development, either **growing professionally (65%) or keeping updated (43%)**. Students generally **achieve their objectives (93% of respondents)** although **marketing seems to have a poorer performance**, which might be relevant to address given its weight
- Satisfaction with the accomplishment of objectives leads to a **low abandonment rate (4%)** and which for the most part is due to personal reasons not related to IEBS quality

Executive summary

IEBS stands out as a preferred option among experienced professionals looking for online business training for professional growth

Business Overview

- Despite the wide offer of **online business schools**, many of these institutions are **largely unknown** and not even considered when taking a business course. **IEBS seem to be well positioned**, showing good prestige and good levels of satisfaction with direct competitors being mainly IE and ESIC (Tier 1) followed by UOC, UNIR and UE (Tier 2)
- **Content quality and ability to complete the course online are the main KPC**, together with payment conditions, when selecting among alternatives. **IEBS performs well in all key factors**, being aligned with key competitors in terms of prestige slightly standing out in quality of resources and methodology, with **pricing being differential**
- **Worse performing factors** (employability and student experience), seem to be **not as relevant** among online schools
- Satisfaction with objectives and the good perception results in a **NPS of 49%, comparatively high** for its sector
- The **positive feedback on pricing** holds when taking a deeper analysis, becoming truly differential, and uncovering **opportunities for higher prices**

Executive summary

Some further analysis might be needed to better understand topics like recurrence and opportunities on pricing

Further considerations and suggested analysis

- Demographics and student profiling from the surveys should be cross-checked against actual student database information. IEBS seems to have a powerful CRM given the different alternatives offered for distribution of the survey
- Given the relevance of online channels to generate leads and therefore for future enrolments, a deeper analysis on would make clearer the ultimate lead source, and the ROI on lead generation, specifically:
 - Share of organic searches vs. paid advertising, and SEO and SEM strategies
 - Organic presence on Social Media vs paid advertising, and social media metrics
 - Web analytics and metrics, comparison and relevance of international webpages, to identify new needs for relevant countries
- A deeper look into the marketing portfolio of IEBS compared to key competitors and to marketing specialized schools is advisable, given the relatively low performance of marketing courses at IEBS
- Deeper analysis on recurrent students to gain new angles for better understanding:
 - Do recurrent students usually remain in the same field of study? Are they always offered new courses on the same field or encouraged to explore new fields? Consider that all IEBS courses are ultimately business related
 - Do recurrent students typically get hooked with small courses, and once they assess quality they take a long term master program? Do students continue taking shorter courses after a long program? What is a best strategy to increase recurrence?
- Assessment of the IEBS performance against main competitors might be biased since it has been made based exclusively on the opinion of IEBS students. The conclusions could vary if a more complete panel, composed by students from other universities, was utilized
- Assessment of the quality of the product is exclusively based on survey responses, but a complete assessment of the platform, content and services of IEBS would help to better understand the level of satisfaction, especially if combined with a benchmark assessment of other key online players
- Further NPS analysis might be conducted against key competitors, to better assess the score of 46%
- A full benchmark analysis of pricing of key competitors, including if available the level of discounts and scholarships granted, would help to better understand the value of IEBS and to better assess the opportunities in pricing, as results from the survey suggest n opportunity for higher prices

Context of online postgraduate education

Context of online postgraduate education

Better prospective salary and employability levels boost professionals to study master's programs, being online courses an attractive alternative

Reasons to study a master's or postgraduate's program

1

Better salary's prospective

Based on information provided by the OECD, there is a significant salary gap between workers with a master's degree and a bachelor's degree

This difference depends on the country, master's vs. bachelor's:

- Spain: +22%
- Mexico: +58%

2

Better employability levels

Once again based on information provided by the OECD, there is a significant employment rate gap between workers with a master's and a bachelor's degree

Depending on the country, master's vs. bachelor's :

- Spain: +4p.p.
- Mexico: +5p.p.

Advantages of studying a master's at an online institution

A

Access to a wider range of courses

Once proximity to the university / institution is not a burden due to online programs, students are able to choose among a wider variety of courses that can be offered by any university from all around the world

B

Ability to make it compatible work and studies

Master's programs, targeted to professionals, need to be adaptable to students agenda. Online programs allow professionals to study and work at the same time, making it easier the decision of enroll in a specialization course

C

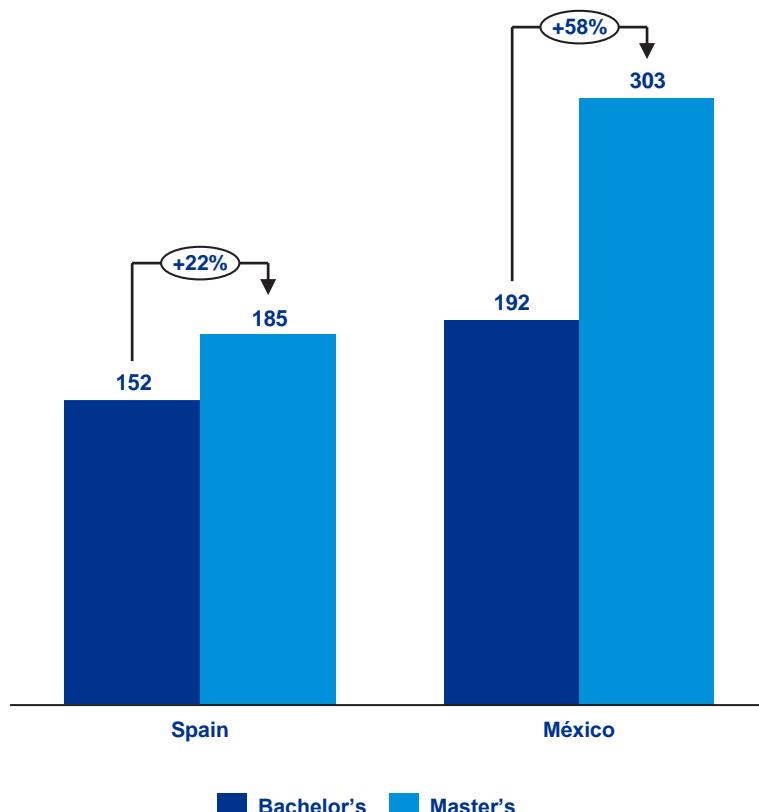

Cheaper tuition

As online institutions do not face traditional fix costs for onsite universities such as building rents and most of the personnel, they are able to offer courses at a considerably lower price

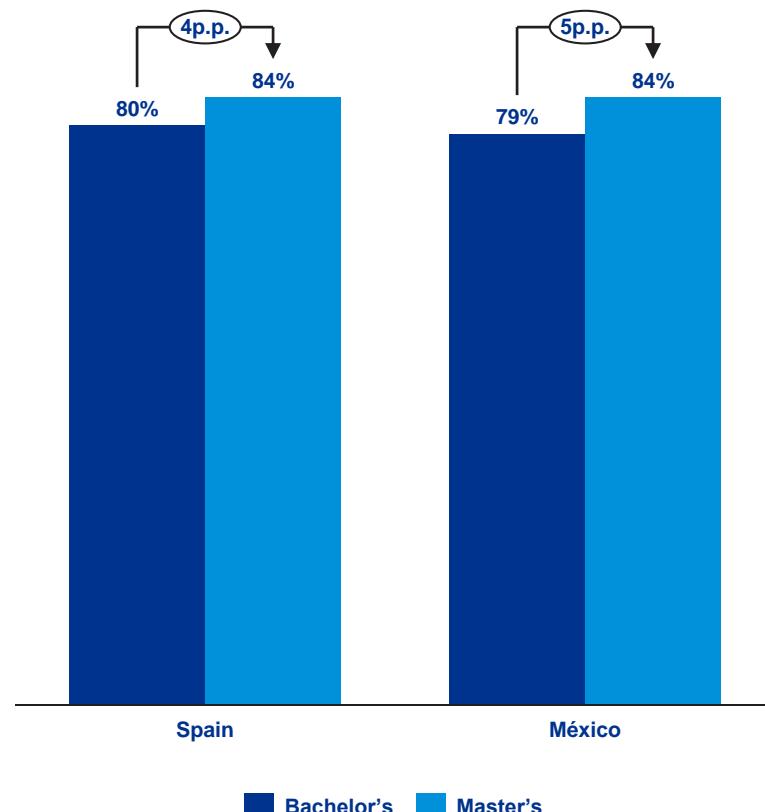

Context of online postgraduate education

Studying a master's program implies, on average, higher salaries and better employment rates, reasons why professionals are keen to invest on them

**Relative earnings of workers by educational attainment
(2017; Index: upper secondary education = 100)**

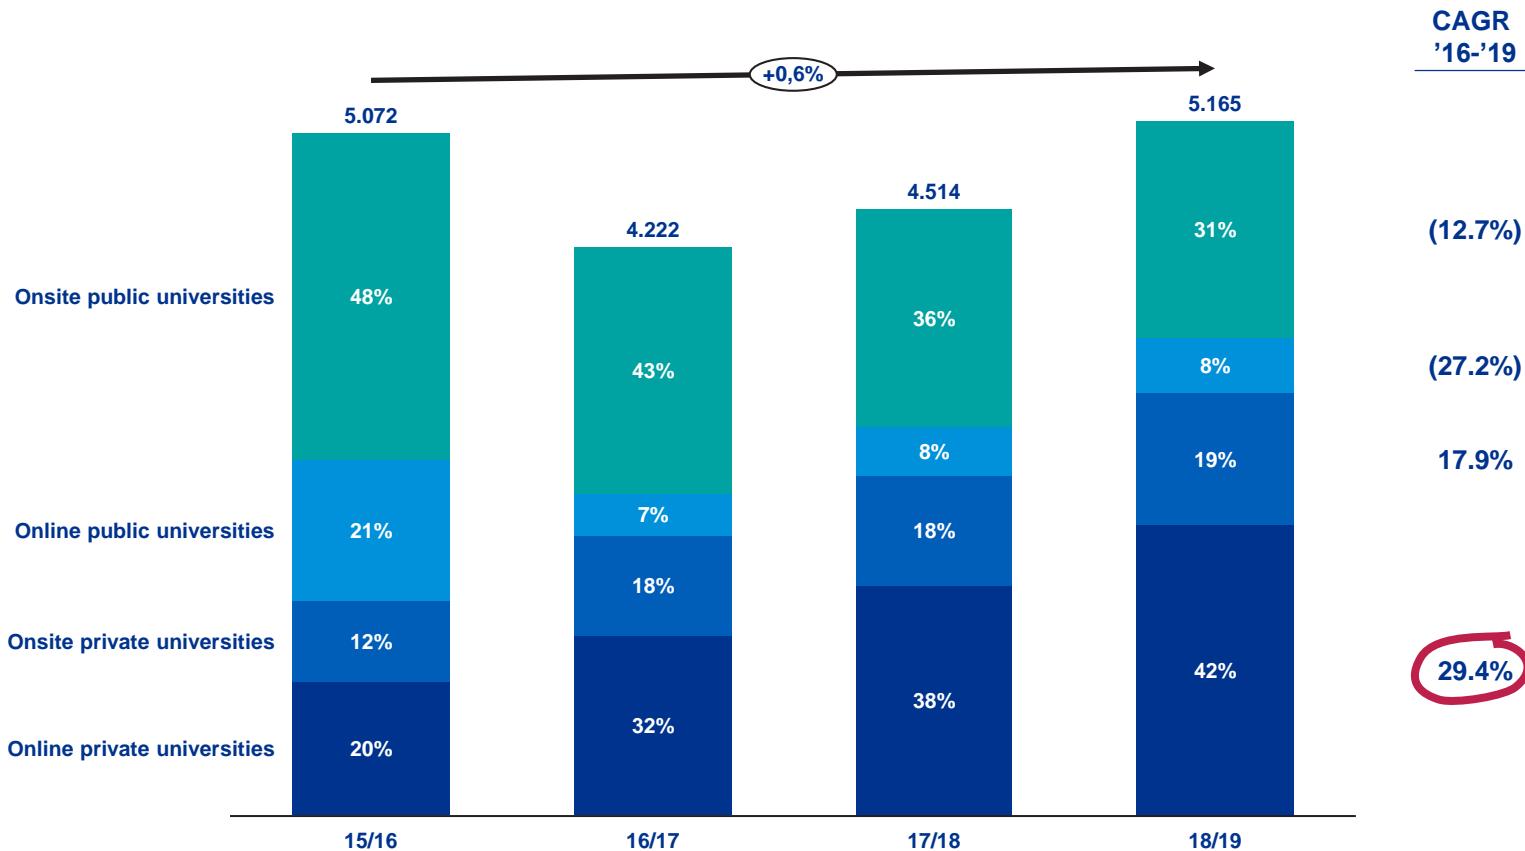

**Employment rates of 25-64 y/o by educational attainment
(2018)**

Context of online postgraduate education

We perceive a trend towards online education as preferred choice, where private institutions seem to offer a more attractive platform and programs

Students over 40 y/o enrolled in master's programs (15/16 – 18/19; Spain; only official masters)

Student demographics & profile

Student demographics and profile

IEBS attracts mainly experienced professionals interested in combining business training with their professional career, which should be confirmed with student DB

Demographics

- Gender predominance of female students (56%) is aligned with the Spanish market in which women are more keen to enroll in business courses offered by private online universities (51% women vs. 49% men) contrasting with the situation in private onsite universities (42% women vs. 58% men)¹
- IEBS is attracting a majority of Spanish population (53%), but with a large share of Latin American students 42%, primarily from Mexico and Colombia, but with presence in a wide range of other Latin American countries. This could represent an opportunity for the UE to leverage on its international position in Latin American countries, with two strong brands in this region
- 95% of IEBS students are 25 y/o or older, which is highly correlated with their level of education, holding 94% of them at least an undergraduate degree, and also aligned with IEBS programs portfolio, primarily directed to experienced professionals

Professional profile

- About 70% of IEBS students are Full-time or part-time employees. Of these, 85% have more than 5 years of experience, and 53% over 10 years of experience.
- These results are aligned with the type of offering from IEBS, as online courses are typically chosen by experienced professionals who want to be able to combine their job with training.
- Additionally this is also aligned with the main reasons expressed by respondents to enroll in their courses, “stay updated and grow professionally”
- The proportion of students who are entrepreneurs or self-employed (21%) also stands out from the results, which considering the wide range of IEBS courses related to entrepreneurship would be expected
- Income levels among respondents are very distributed among different ranges, given the diversity of countries of origin, and the diversity of job positions within the business related fields. Nevertheless, we can observe c.76% of respondents with net earning over 1,500€, which would be aligned with an professionally experienced population

1) Ministry of Education of Spain. 2018/2019

Student demographics and profile

IEBS students come mainly from Spain and Latin American countries, with no relevant differences across these regions

Profile differences

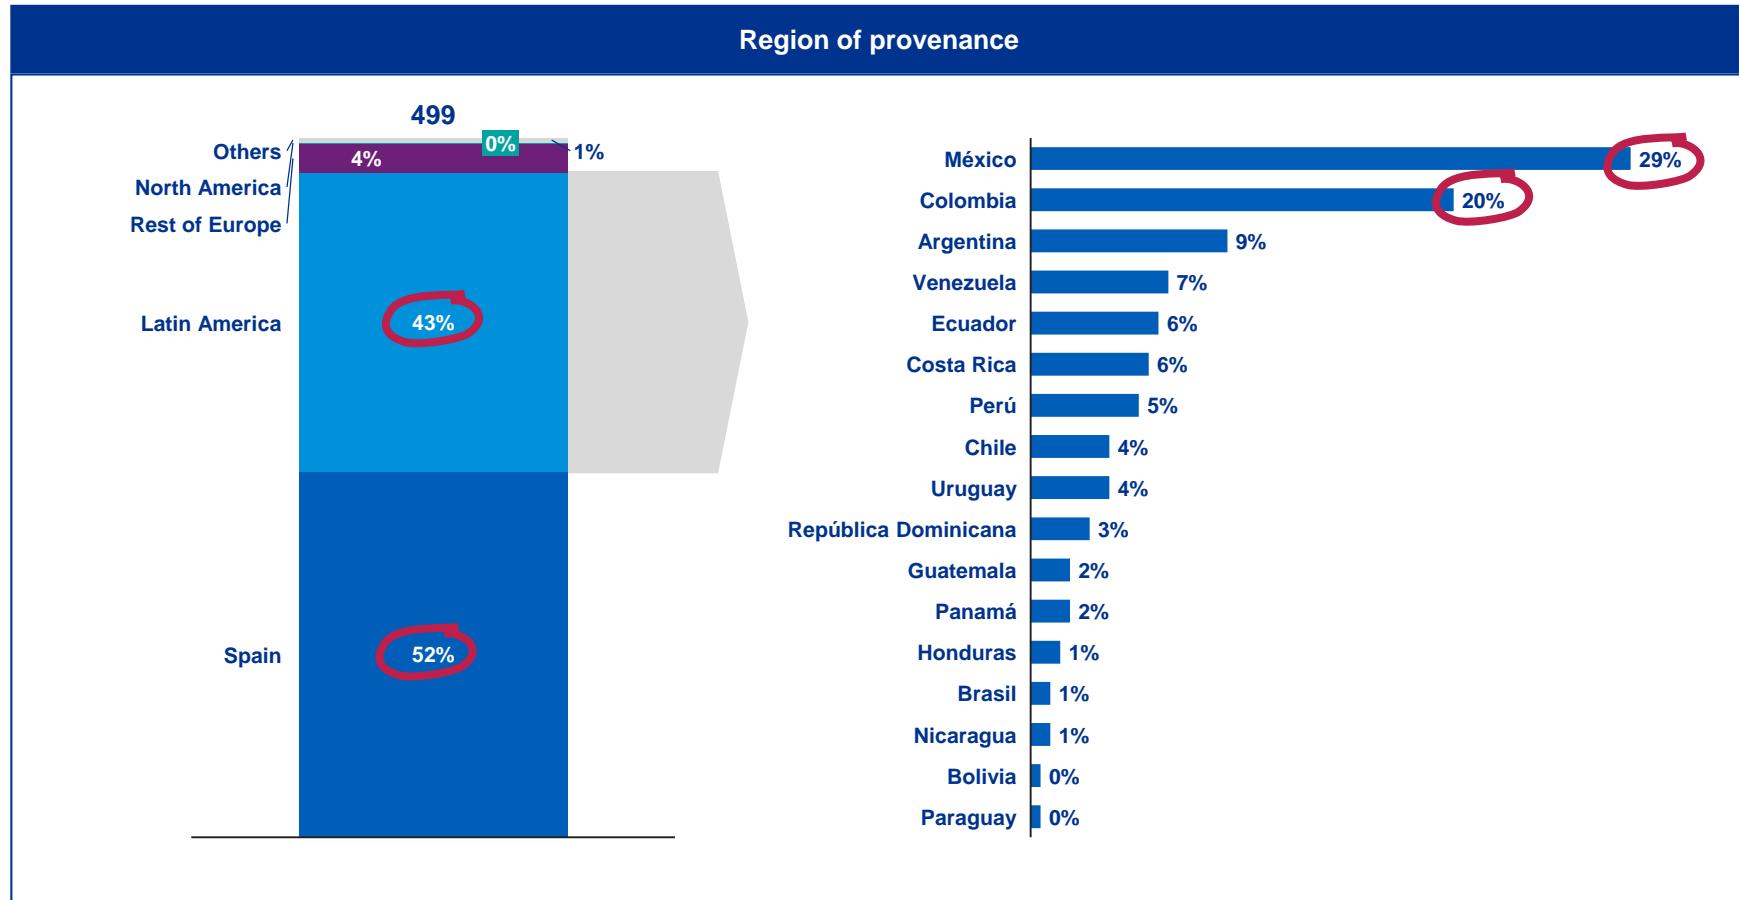

- Differences in demographics across the key regions (Spain and Latin American) seem not too relevant, and are probably related with the underlying socioeconomic backgrounds of these regions. Thus, Spanish students have on average a slightly higher income, and Latin American countries have a smaller share of vocational training. Population from Spain is also slightly more aged than Latin American students
- These differences are also present when looking at the professional profiling of the student sample, again in line with socioeconomic aspects of both regions, so that for example Spain presents a higher rate of students unemployed. In contrast, the rate of self-employed students in Latin America is noticeable, reaching around 25% of respondents
- Among the employed population, other than some more part-time jobs among Spanish students, the level of seniority is very similar, as mentioned, attracting mainly experienced professional with over 5 years of experience

1) Ministry of Education of Spain. 2018/2019

Student demographics and profile

The large majority of IEBS students come from Spain (52%) and Latin America (43%) where IEBS has presence primarily México and Colombia

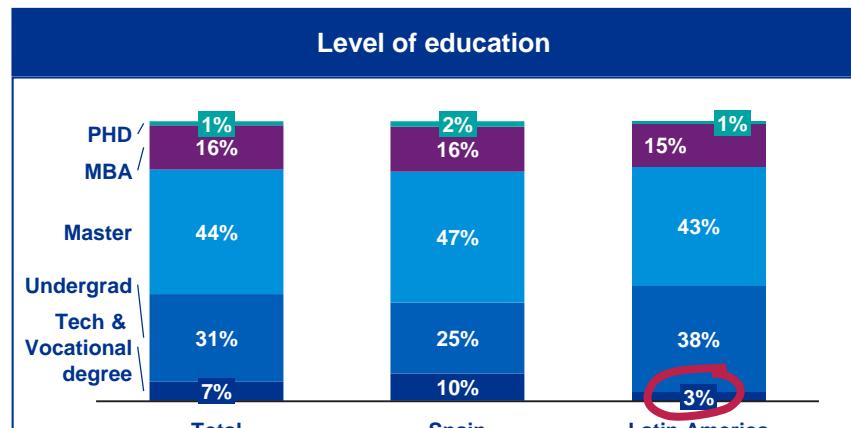

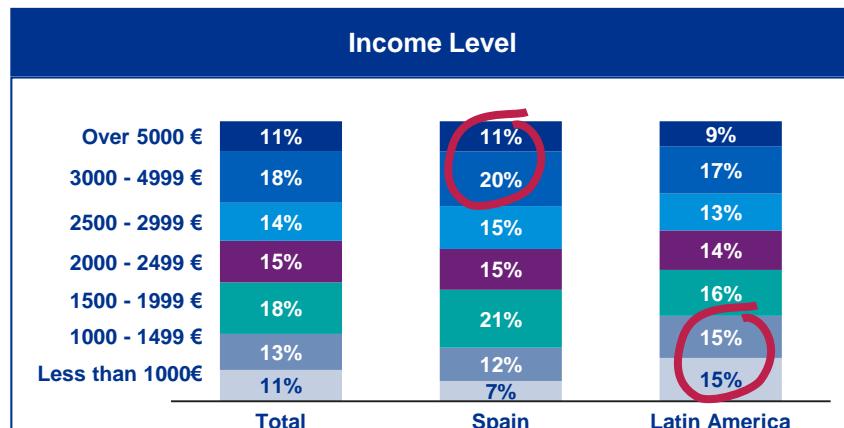

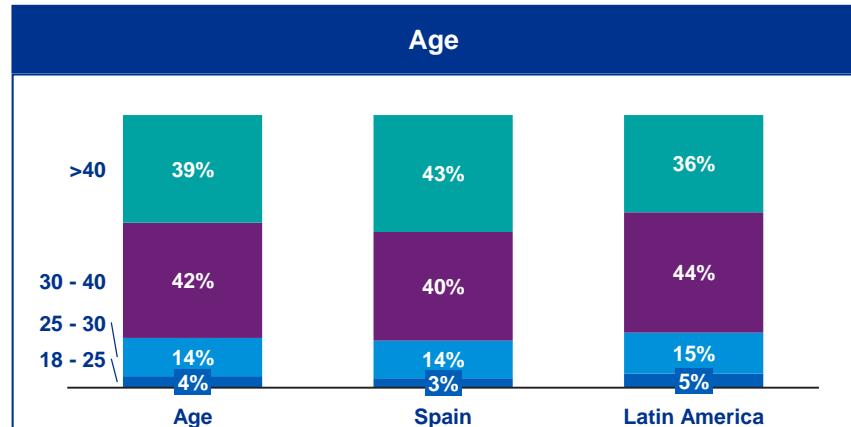

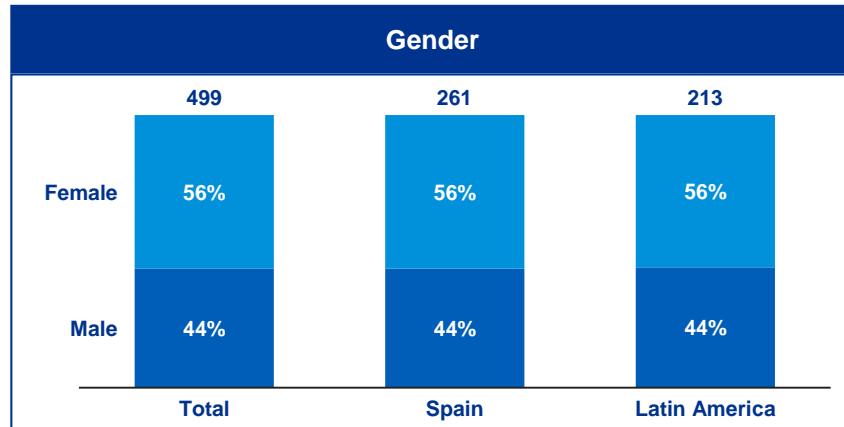

What is the respondent's profile?

Student demographics and profile

No relevant demographic differences are observed, only some higher income level among Spanish students, and fewer vocational degrees in Latin America

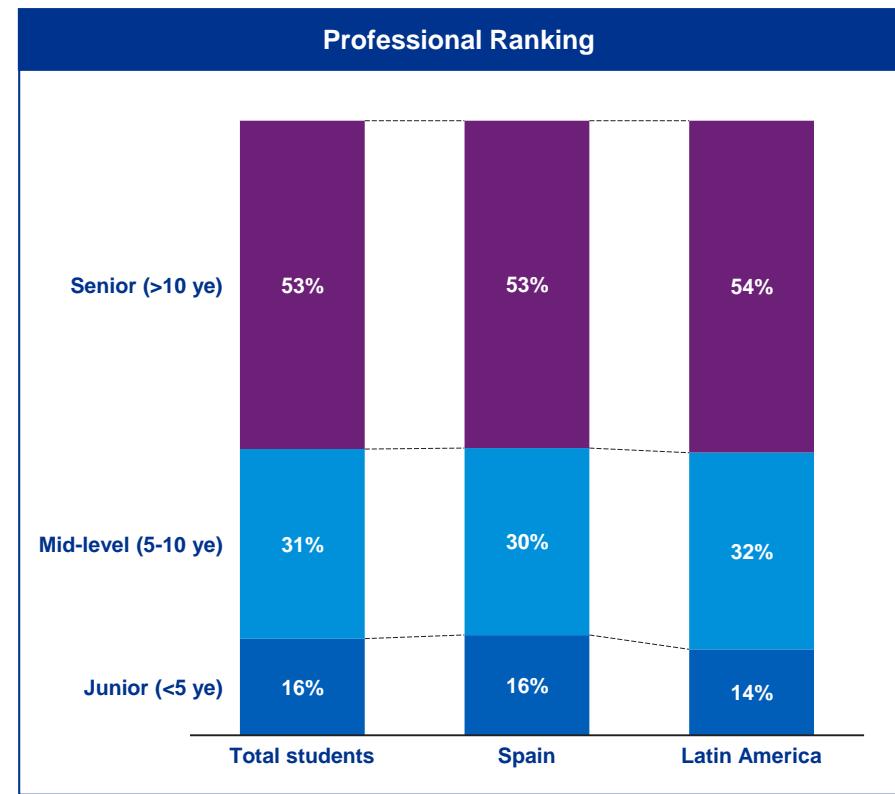

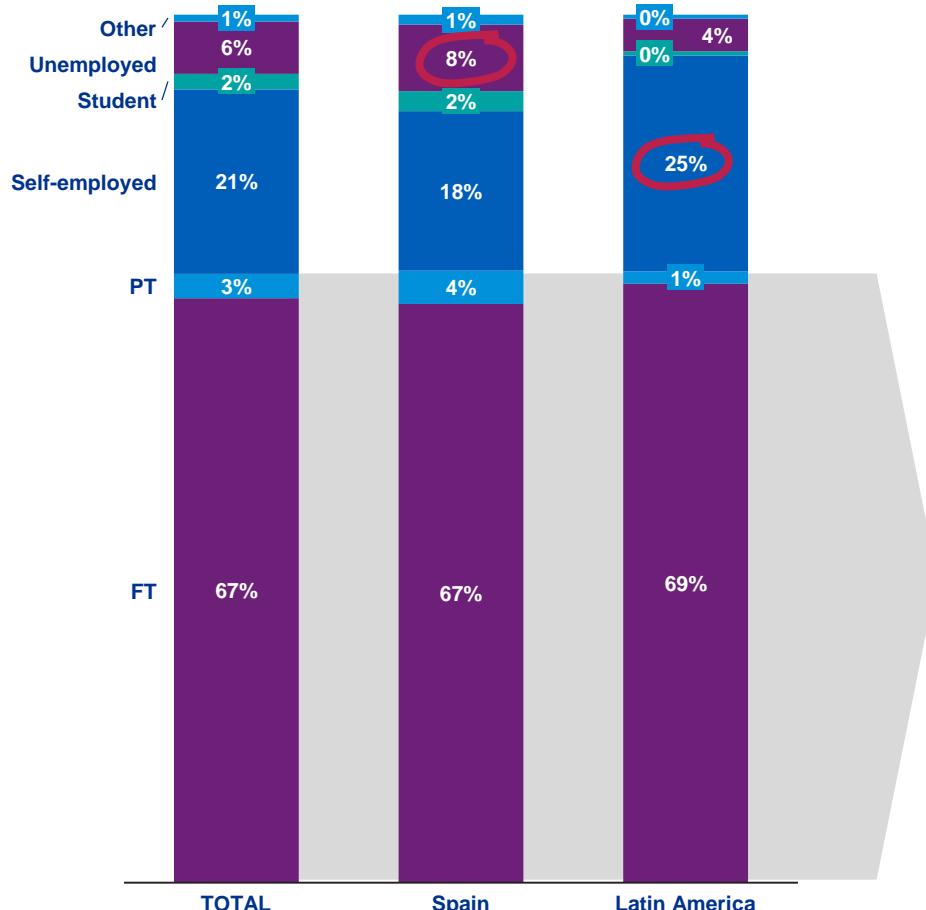

What is the respondent's profile?

Student demographics and profile

Similarly, slight professional differences exist, with higher rates of self-employed students in Latin American, and a higher unemployment rate in Spain

What is the respondents professional profile?

Program portfolio

Program Portfolio

IEBS seems to attract more students to its longer programs across five major business fields, but with prevalence of Business & Tech and Marketing

Field of study	<ul style="list-style-type: none">— IEBS is a Business School focused on 5 major fields of study: Business & Tech representing 39% of respondents, Marketing (37%), Entrepreneurship (8%), Social Media (8%), HR (7%) all of them focused on new technologies and innovation— It is clear and expected that the more general fields of study attract a larger share of students (Business and Marketing) while other more niche or specialized such as Entrepreneurship, Social Media and HR have a smaller pool of candidates— Also, we need to consider that the offer in these areas is broader, with over 48 programs for Business and 69 for Marketing compared to between 24 to 28 programs¹ for each of the other learning areas, obviously related to the narrower field of these. Although some of these programs are actually common among areas, so the perception on the field of study might be different across respondents, probably depending on their professional profile— All programs offered by IEBS are non-official programs, obtaining an IEBS degree, for a few of them, students can obtain a second degree from registered universities (URJCI, UCAM, etc.). This prevalence of non-official degrees is typical among business schools for experienced professionals, and should not be considered a major risk
Type of program	<ul style="list-style-type: none">— All IEBS courses are categorized as one of the following types of programs: Master, Postgraduate, University Expert, Other courses and modules in addition to in-company training that was not part of the scope of this survey— The differences among these different programs are mainly the depth in content and the duration of the program.<ul style="list-style-type: none">○ Masters have between 400 – 1.125h and including MBAs or Executive Master○ Post-graduate – 350h (10 months)○ University Expert: 2 – 4 months , very specialized in a specific area○ Other: modules of 15min to 5h and courses of 1-2 months— Longer programs such as Master and Post-graduate are by far the more demanded type among respondents, representing 57% of total for master programs and 34% for Post-graduates. Only 8% chose a short program. This varies slightly per field of study, with master programs being more prevalent for Social Media— It also needs to be pointed out that certain types of programs are not available for the key fields of study, so there is no offer of University experts for Business & Tech or Entrepreneurship

1) IEBS website

Some relevant differences exist considering different segments, largely influenced by the different positioning and offering of IEBS across time and regions

Profile differences

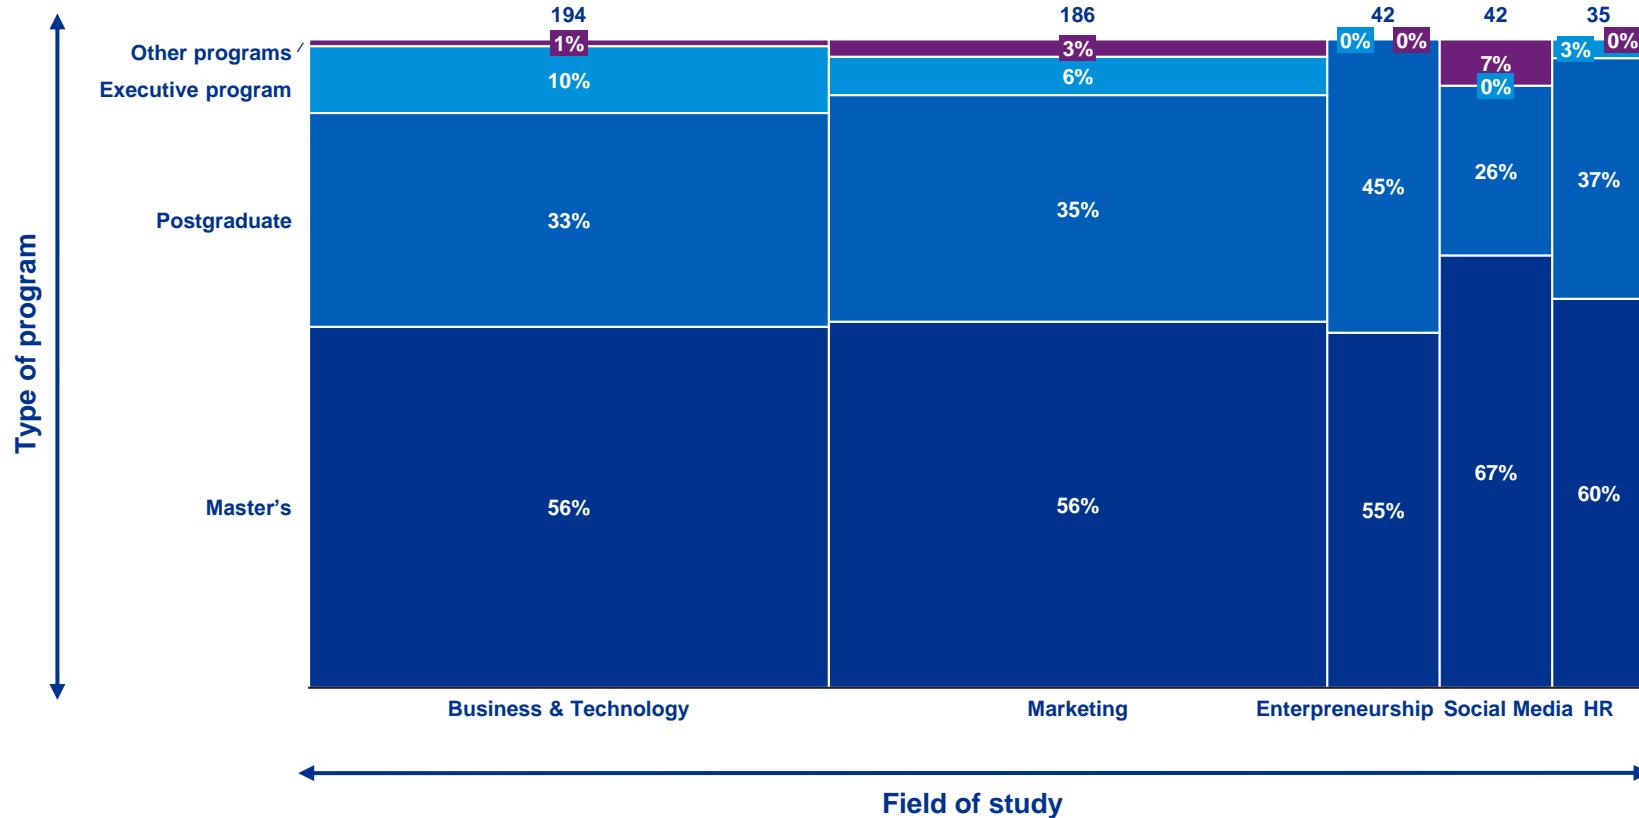

- Firstly, the difference between men and women study at IEBS is just a manifestation of the prevalence of women for online business masters that we already pointed out. Women are a majority in business & tech courses, also standing out the election of longer and more intensive courses
- The differences between current students and alumni offers more information on the evolution of IEBS portfolio and positioning. Business & Tech courses seems to have grown versus marketing, entrepreneurship and the rest.
- As mentioned before, many of the courses might be found in different areas (e.g. digital marketing and sales management 4.0 appear both as a Business & Tech course and a Marketing course) so people choosing the same course might have responded differently based on how they enrolled
- To this extent, the growth of Business courses among current students is expected, as this field of study (together with Social Media) was not promoted as such until late 2016 (according to cached versions of IEBS website¹). Before that, areas offered in IEBS were more distinct: Finance, Marketing, Entrepreneurship and Human Resources.
- The creation of a more general Business and more specific Social Media fields, probably has led to growth of these areas against Marketing, in some cases even if the courses undertaken were the same
- IEBS online positioning and portfolio seems also to affect the differences found across regions as IEBS maintains 4 versions of their website for Spain, Mexico, Portugal and Brazil, where the portfolio is slightly different
- Mexican website offers the same fields of study but with some additional focus on MBAs and Operations. Also it offers only 2 types of programs, Master and Diplomas (equivalent to Postgraduate) but no shorter courses, which is noticeable in the results for Latin America. Brazilian and Portuguese websites offer a much narrower portfolio, but the sample size does not allow to obtain any significant conclusions
- Also, in line with a higher share of self-employed students coming from Latin American, entrepreneurship courses also have a relatively higher demand in this region
- Another highlights from comparing the different website versions is that Latin American webs feature prominently in their homepage, the double European degree offering of IEBS degree plus an UCAM degree, so this is probably a relevant purchase criteria for Latin American students
- Lastly, further reflection on other tailored websites might be for appropriate, considering the results on key markets

1) IEBS website (current and historical records)

Program Portfolio

Students are distributed among the 5 fields of study offered by the IEBS, but largely concentrated in Business and Marketing, specially in more extensive courses

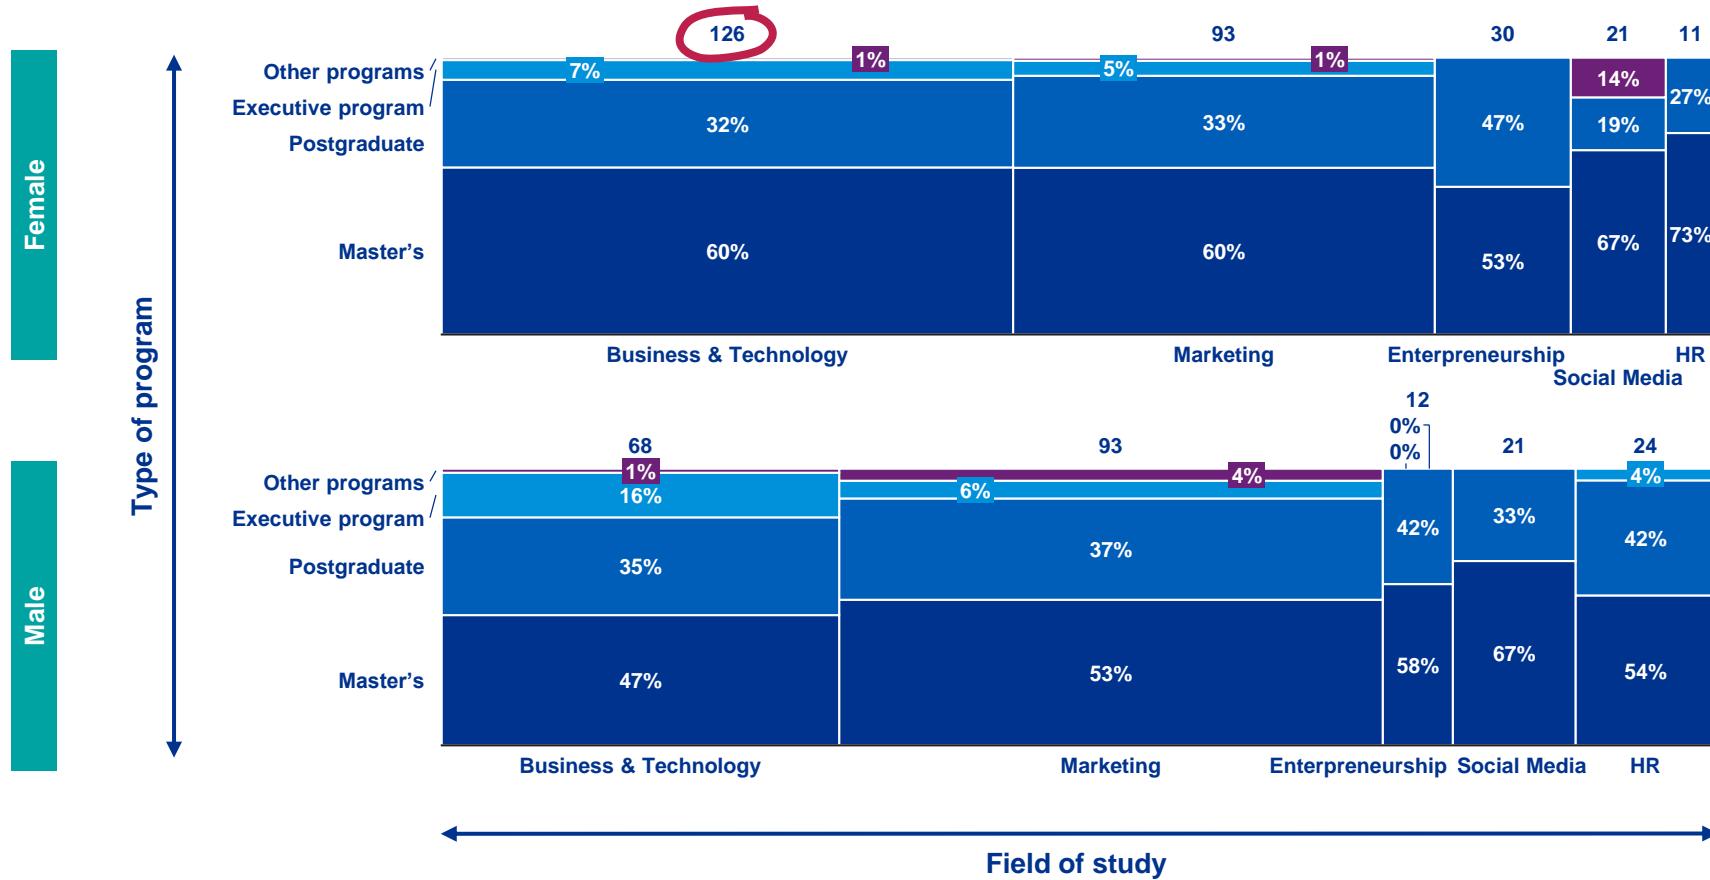

What did you study at IEBS?

Program Portfolio

Prevalence of women among IEBS students is noticeable with more presence of in Business & Tech courses and generally opting for longer programs than men

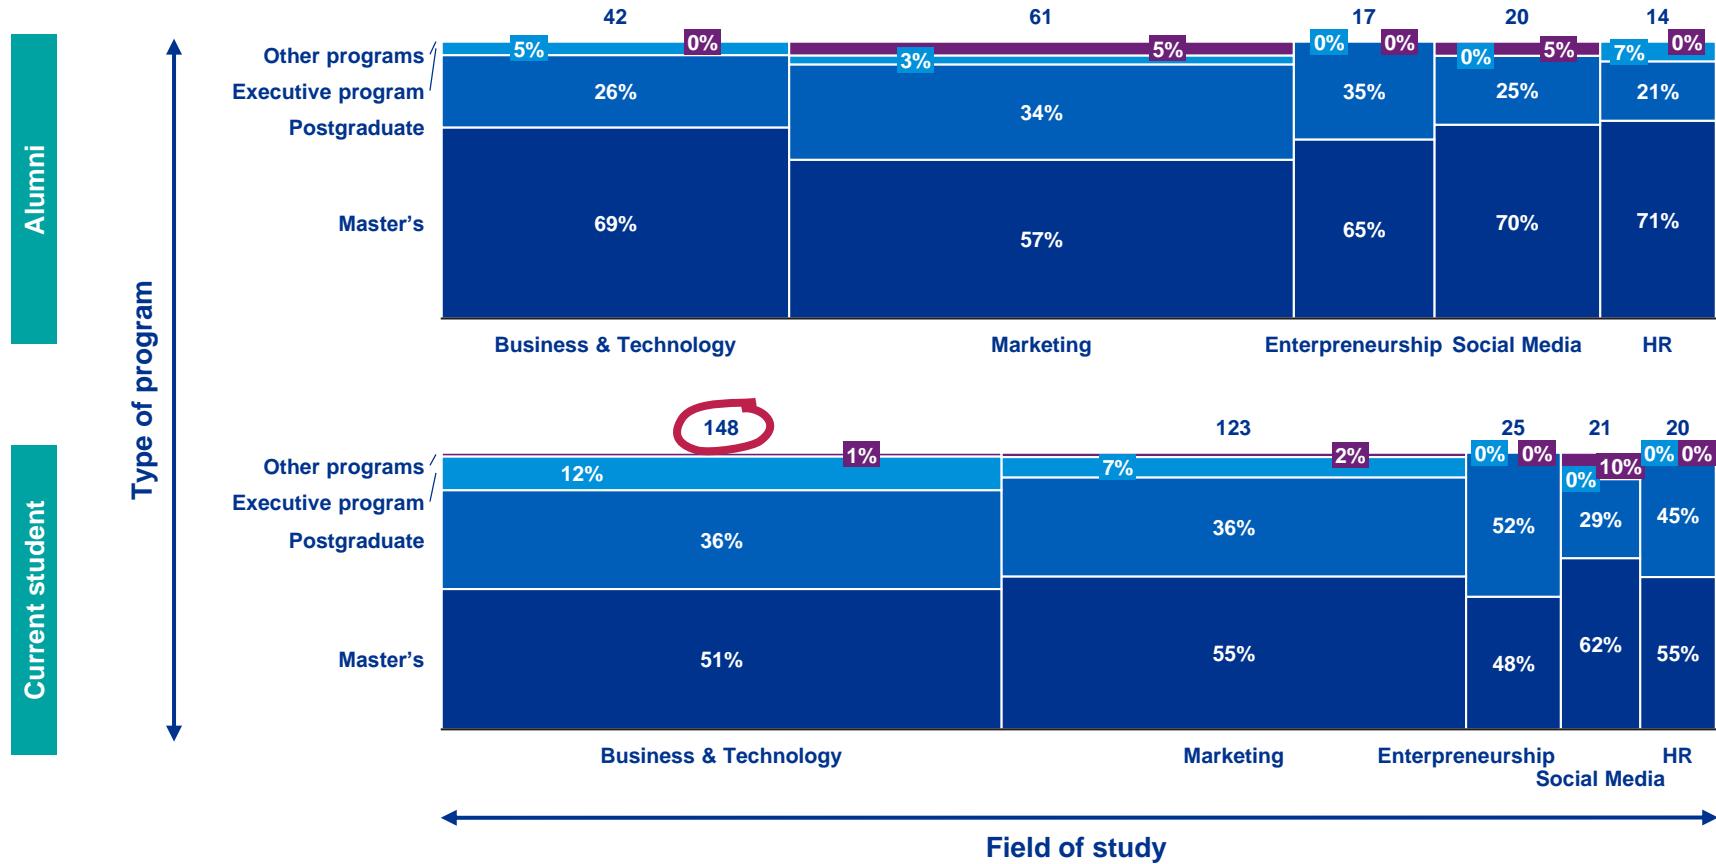

What did you study at IEBS? Drill down by gender

Program Portfolio

According to current students and alumni results, there seems to be an evolution towards Business programs, from a focus on marketing and entrepreneurship

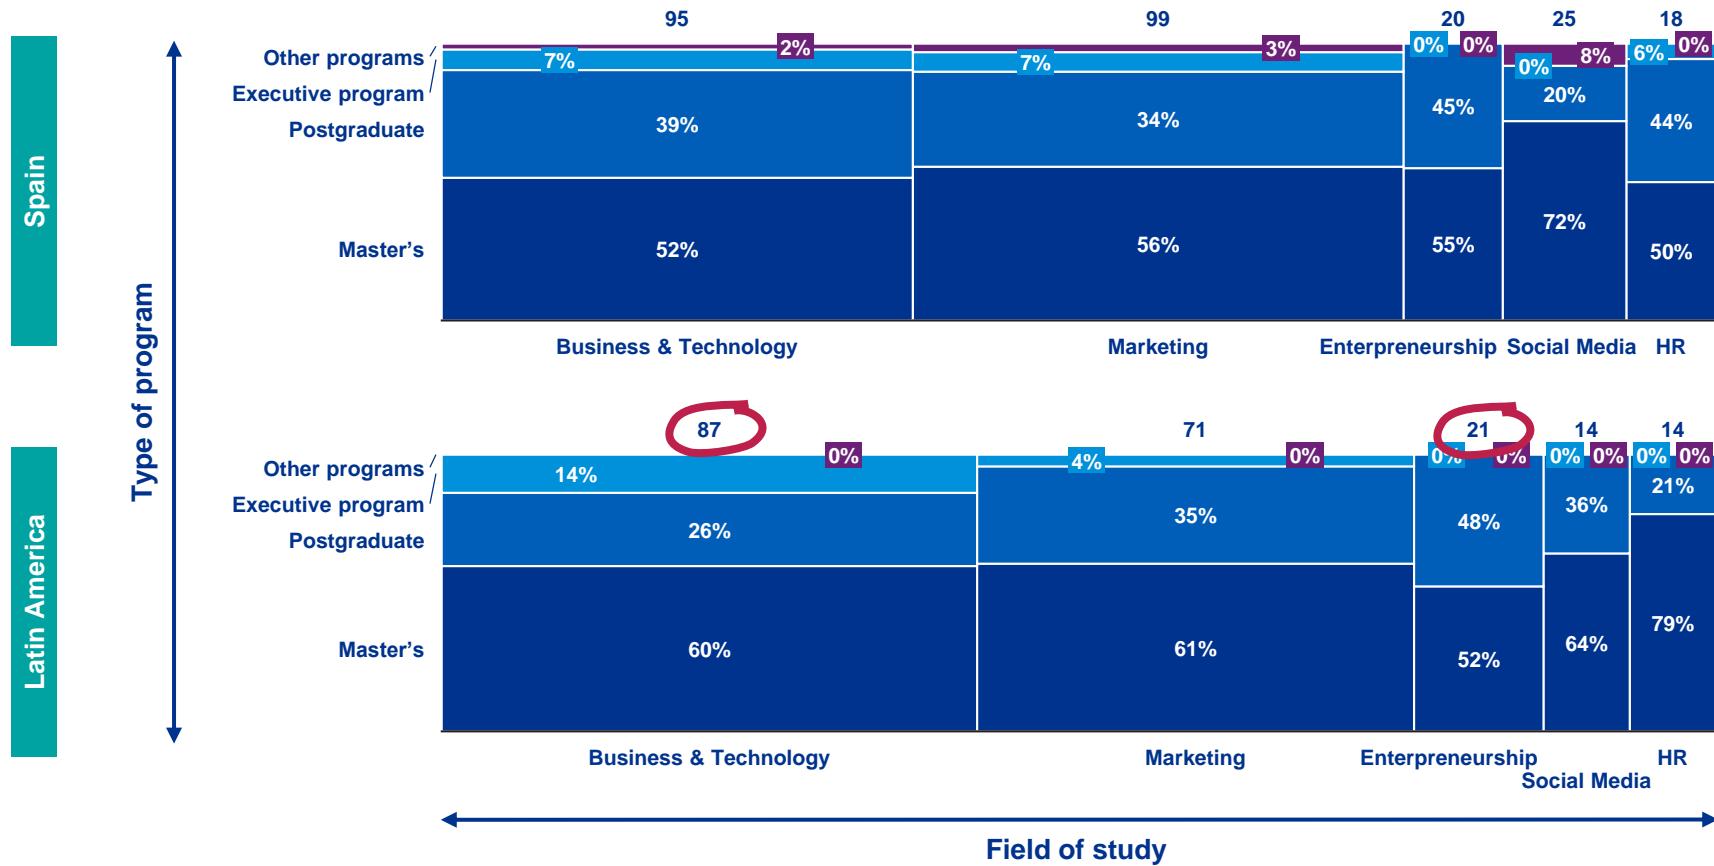

What did you study at IEBS? Drill down by respondent profile

Program Portfolio

Business & Tech and Entrepreneurship courses are prevalent among Latin American, aligned also with the prevalence of self-employed students

What did you study at IEBS? Drill down by nationality

Enrolment & recurrence

Enrolment and recurrence

As a pure online player, IEBS focuses clearly on obtaining leads from online channels where they seem to keep a very effective positioning

IEBS discovery

- The results related to the way in which the students first knew about IEBS are consistent with its online nature: 55% of the students knew it through internet search, 17% through social media, 9% via IEBS online advertising and another 2% via email marketing
- Definitely these results point to a good online positioning of IEBS, but they should be taken carefully, as many of the results from online search and social media, might still be paid advertising, not fully noticed by respondents
- Therefore, relative importance of SEO and SEM positioning cannot be validated from these results. More details would be needed to understand the cost and ROI of IEBS online positioning
- Additionally, results also highlight a relevant proportion of students who learned about IEBS via referrals from a family member / friend (12%), which although not outstanding, it is quite significant
- When comparing referrals to the NPS analysis results, with 59% of promoters of IEBS, referrals results might seem low. It needs to be remarked though that the question refers to how candidates first learn about IEBS, which it appears to be mainly through a good online positioning, while referrals for final enrolment might still play an important role

Recurrence

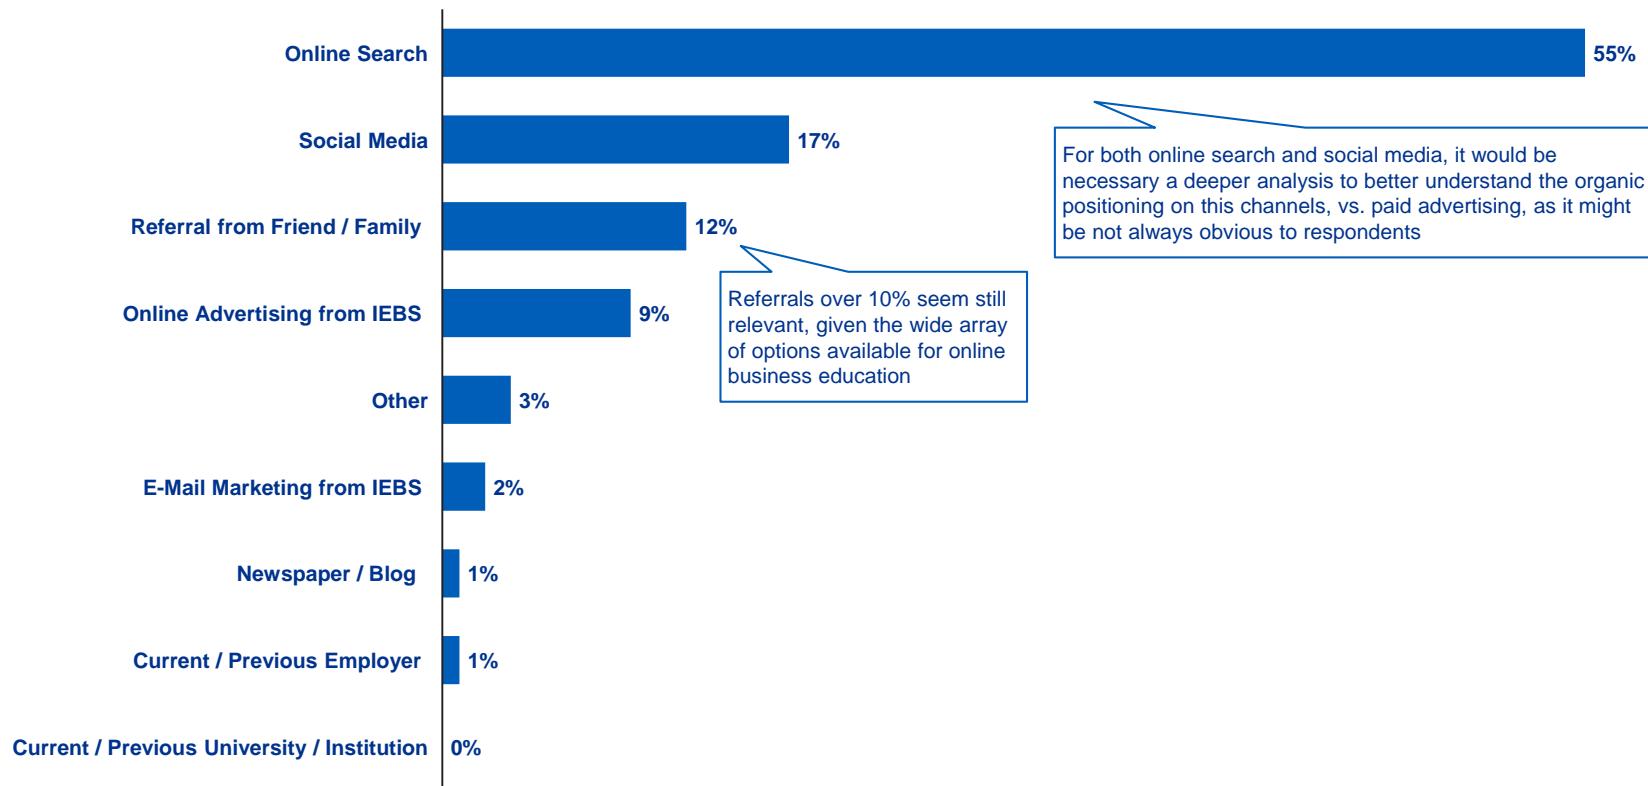

- There is around 8% of respondents that have been recurrent clients taking more than one course, and just about 1% taking more 3 courses or more
- This indicates some potential, but current levels are not very high. Considering the strong IEBS brand, the good level of satisfaction and the engagement possibilities online, there might be further opportunities to attract recurrent students
- Those areas with more recurrence are those more specialized fields, such as Social Media (12%) and HR (15%)
- Social Media is a very dynamic environment, and courses offered by IEBS seem specific, so students might be more inclined to take more courses to keep updated or to learn new dimensions of social media. It is also noticeable that this is the area where short courses are more prevalent, so recurrence on this, due to time and price would be expectable
- In the case of HR, although short courses are not as prevalent, it is also a specialization field, so it might even be the case that a general business student later takes an HR specialization course
- Further analyses to understand recurrence is advisable, checking whether recurrence happens from one field to another, and whether it is normally initiated with a long course and the recurrent short courses, or vice versa

1) IEBS website

Enrolment and recurrence

Online searches are the major lead source, with good performance of social media, in both cases deeper understanding is needed on the weight of SEO and SEM

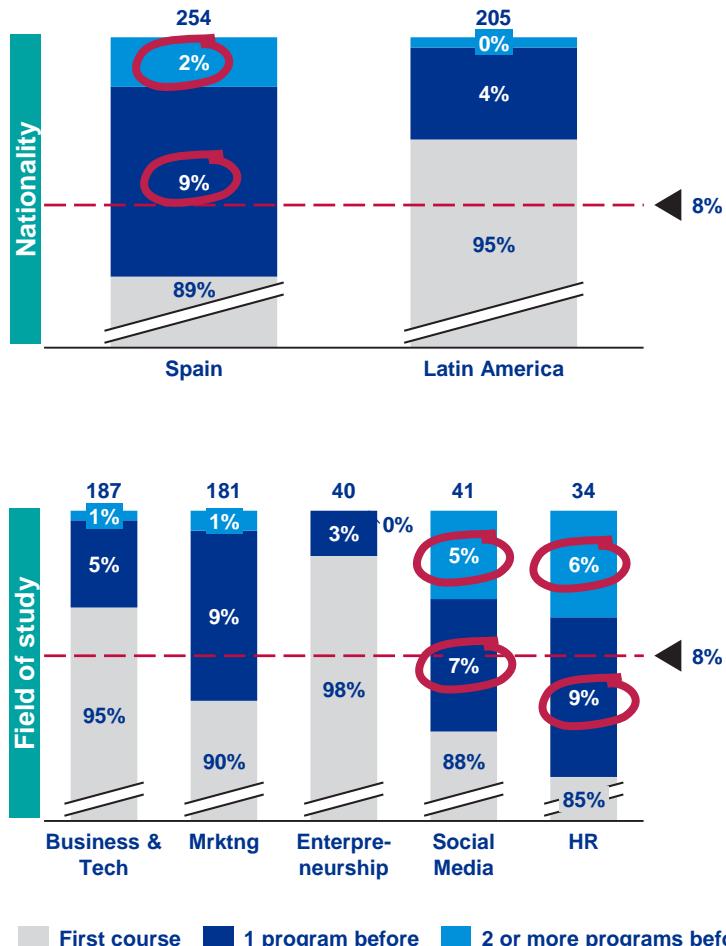

How did you first know about IEBS?

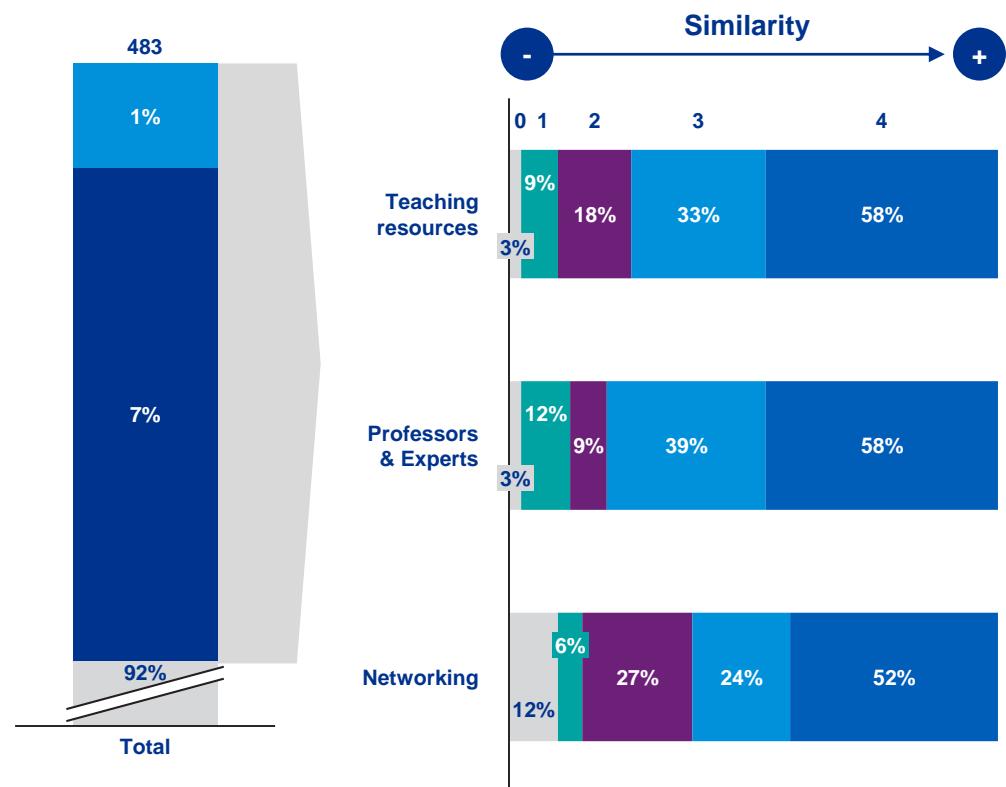

Enrolment and recurrence

Recurrence rate stands at 8% of respondents, slightly higher in Spain and standing out the higher rate in more specialized areas such as Social Media and HR

How many courses have you completed at IEBS?

How different is your experience related to the previous courses?

Motivations & objectives

Motivations and objectives

Students seem take a course at IEBS to progress in their careers, by growing professionally and learning new things, with a good achievement rate at 93%

Motivations

- The nature of the courses offered by IEBS, generally masters and postgraduate courses in business-related areas, with a high component on innovation, for experienced professionals is clearly related with the main motivations pointed out of the students: to grow professionally (65%), to keep me updated (46%), to learn/ intellectual curiosity (33%)
- IEBS courses generally offer specialization in new technologies, digitalization and other innovation, which normally would serve as a way of differentiation to progress on the professional career. The fact that courses are focused on innovation and digitalization, a very changing environment, gives relevance to the selection of keeping updated
- Results also highlights a relevant proportion of students whose objective is running their own business, in line with the focus of IEBS offer of entrepreneurship programs
- There are some relevant changes in motivations across different segments. The growth of multiple objectives among current students vs. alumni, specialized when related to prestige and of IEBS giving the opportunity to develop professionally, indicate an improvement on IEBS perception. Also comparing between regions, IEBS seems to have somehow higher prestige, as this is a clear motivation for Latin American students, which might be related to gaining an European degree
- When comparing against multiple fields of study, the general ranking of motives prevail, but some aspects stand out. Social media students are more oriented towards growing professionally (74%), being a narrower more specialized field, it makes sense that they actually need some specific knowledge to progress, compared to a more general business course. Also, although expected, it is worth mentioning that among entrepreneurship students, there is a higher rate pursuing the course to start or manage their own company
- Lastly, when comparing the type of program, it is observable that people consider longer programs such as full masters will enable better professional development, and shorter courses are more generally considered when needing to keep updated or for some intellectual interest

Goals achievement (only alumni)

- Considering a general rate of achievement of objectives of 93%, the feedback from alumni who completed their programs seems to be rather positive. Although short courses perform considerably worse, we need to consider this as an isolated case given the low significance of responses. But in any case, it would be understandable that shorter programs, offering limited time and content, have a higher probability of not meeting certain expectations

Motivations and objectives

A deeper analysis reveals that marketing courses perform comparatively worse, but still the general good satisfaction leads to low abandonment rates

Goals achievement (only alumni) (cont.)

- There are some other segments that perform relatively lower than the total population. Firstly students of marketing courses drop to an 88% of satisfaction with goals achieved. Given the relevance of marketing programs, it might need further analysis of the marketing portfolio of courses to understand better what expectations are not being met and to adapt if necessary, as marketing students are specially interested in developing professionally
- The second segment with a relative underperforming would be those professionals between 5-10 years of experience. Considering once again, that the key objective is professional development, it is understandable that professionals at this point might be themselves at a professional crossroads, some of them also considering changing professions, which might lead to more frustration if objectives are not met
- But focusing once again on the general population, and looking into details for each objective, they all perform generally well and between 75% to 80% of respondents who chose a particular objective considering they achieved it
- Learning a new profession falls a little short from the general perception, understandably since any career change is usually more complex and difficult to achieve. The other underperforming objective is finding a job, that in any case is not very consider, and it might also be related more to the job market in Spain than with problems with IEBS quality
- As for objectives considered as not achieved, the number of respondents is small and statistically insignificant to gather any meaningful conclusions per objective, being for the most part isolated cases

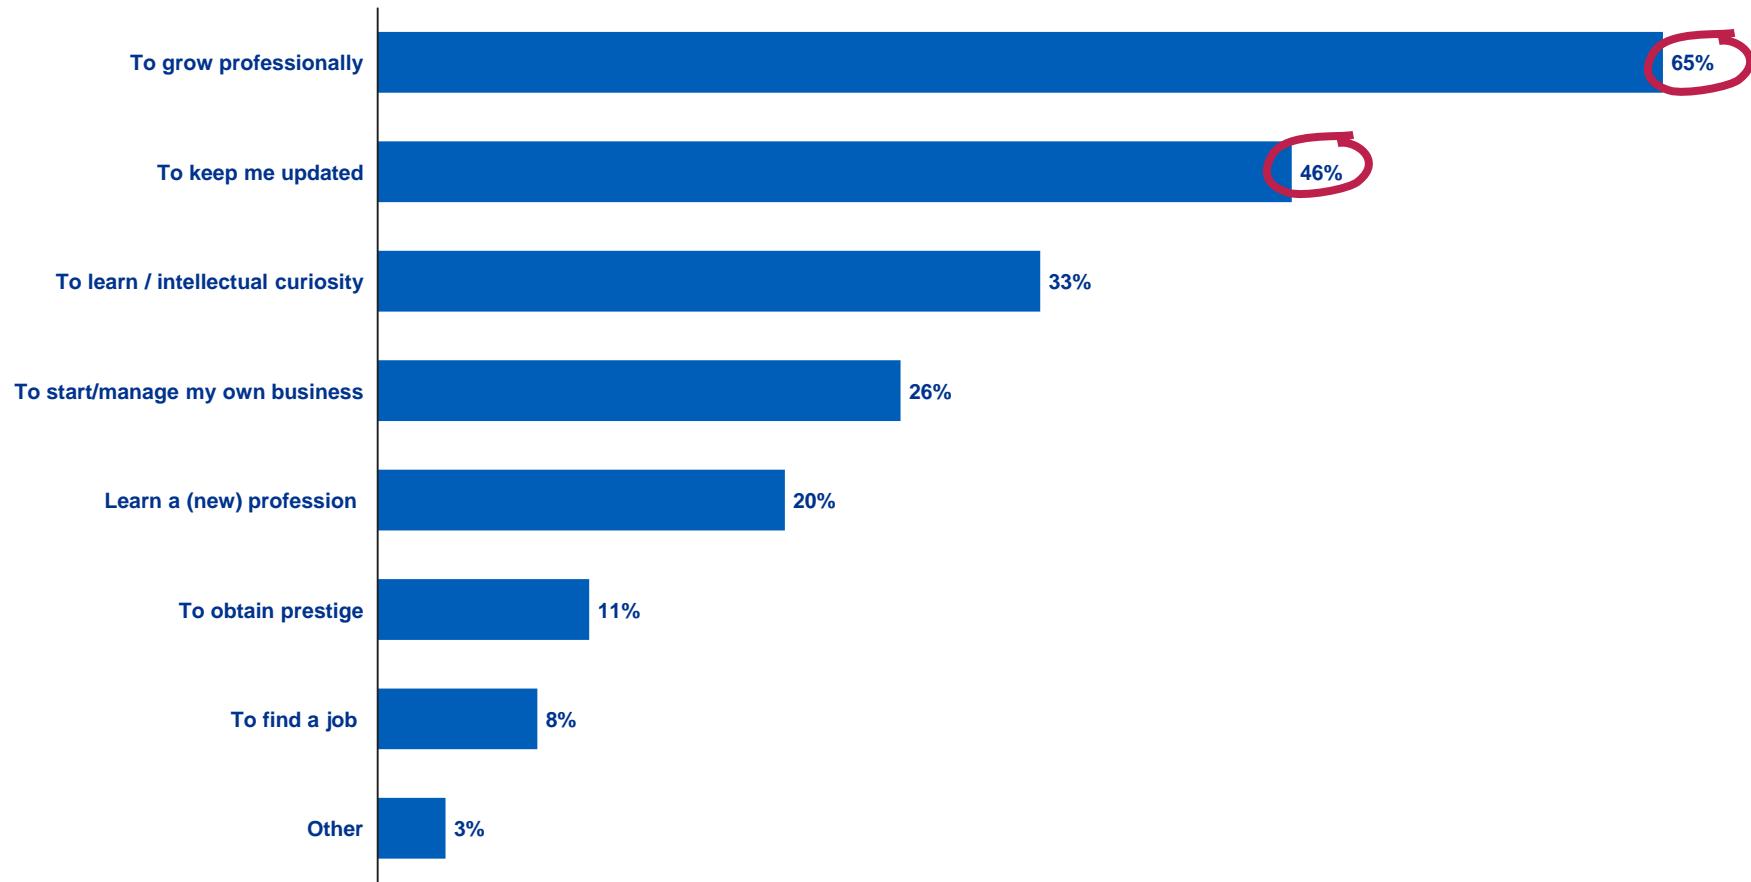

Non-completed

- In correspondence with the high satisfaction rate with the achievement of objectives, the rate of abandonment of the course is low at only 4% of respondents
- Moreover, the main reason is clearly the lack of time (44%), and among other reasons, there are many personal motives non-related with the quality of IEBS (67% of respondents to other motives).
- Among these personal reasons, it is relevant to point out that there are a few justifying their abandonment because of lack of funds to continue, but none of which marked the course as too expensive as a reason to not continue
- Despite the generally good results, it still needs to be considered that some other reasons have relatively high importance such as content not expected (39%) and teaching methodology (33%), which together with some comments on unmet expectations, might require some review and improvement

Motivations and objectives

IEBS is clearly chosen by experienced professionals who want to combine their job and training to progress in their career via update on innovation and specialization

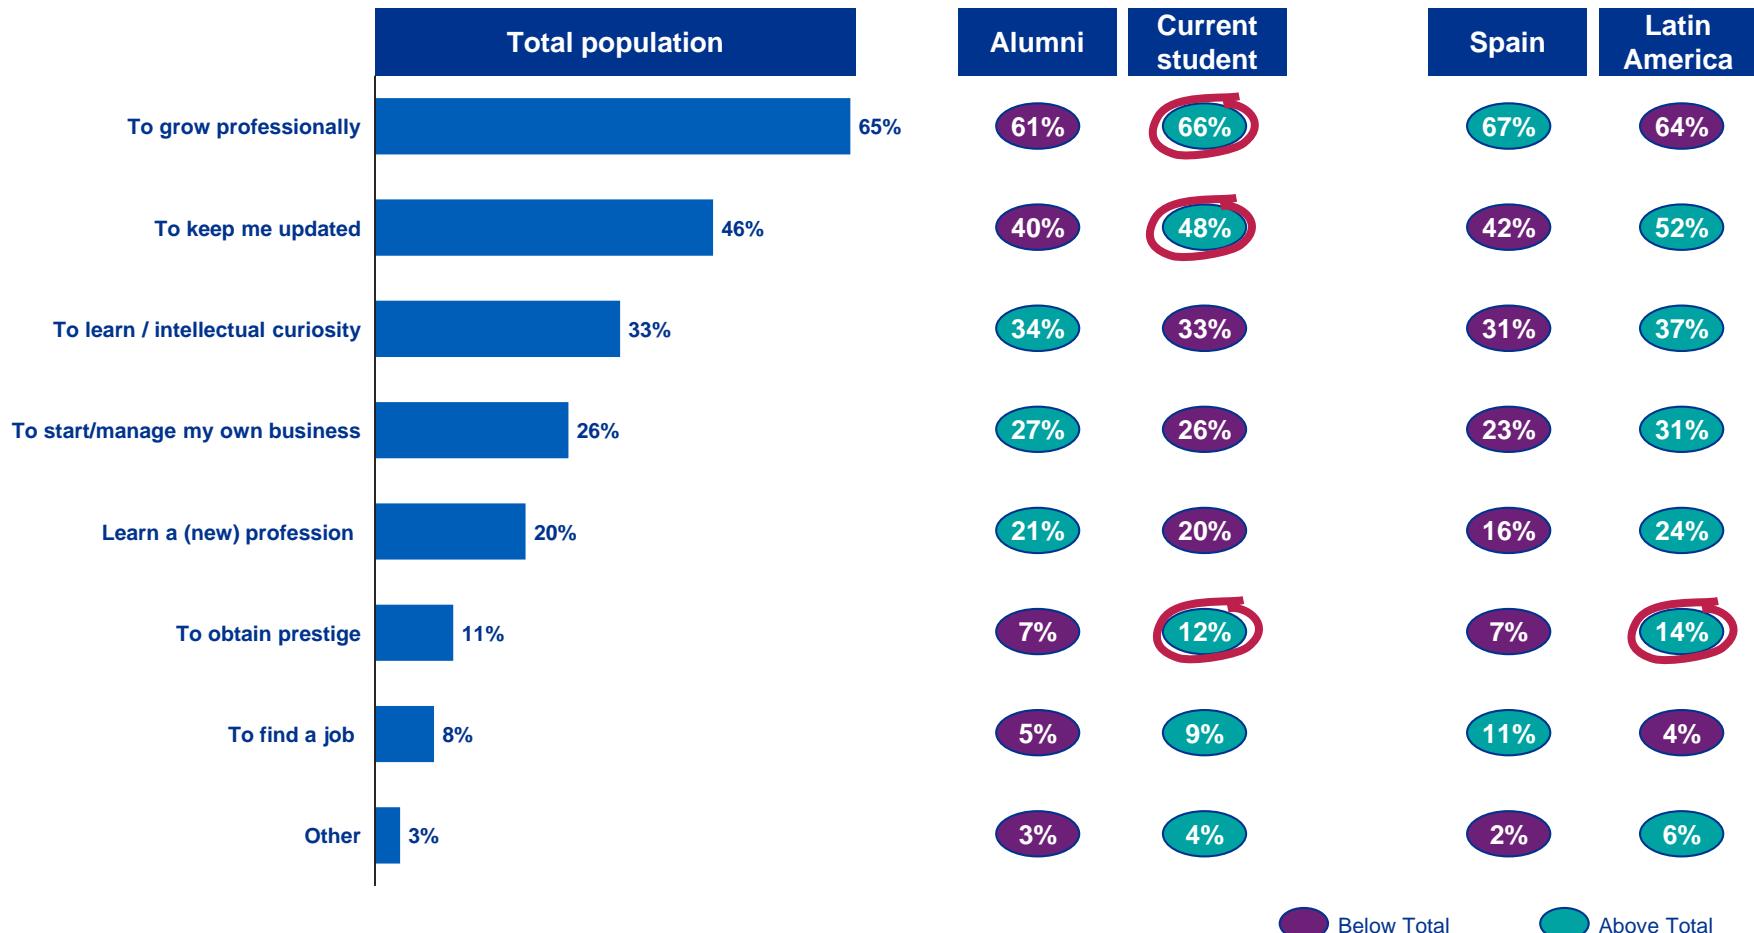

What was primary motivation to study at IEBS? – Drill down by respondent profile, gender and nationality

Motivations and objectives

Current students selecting more prestige and other key motives, might indicate a growing perception on IEBS quality, which already seems higher in Latin America

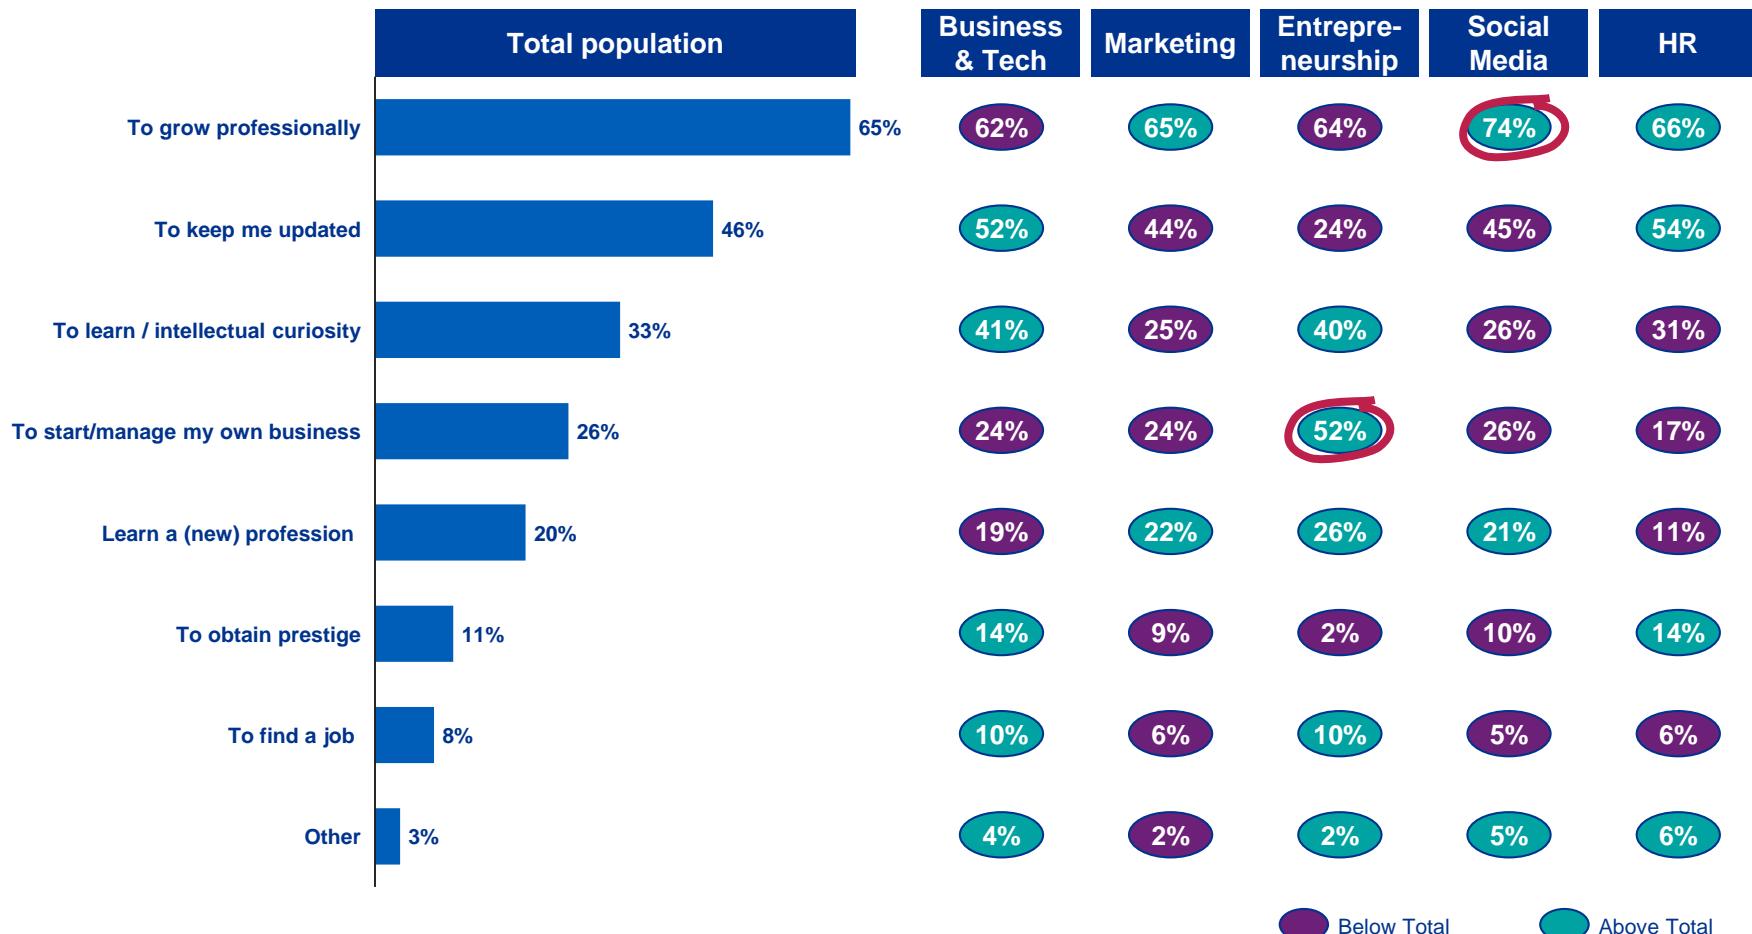

What was primary motivation to study at IEBS? – Drill down by respondent profile, gender and nationality

Motivations and objectives

Grow professionally is clearly the main objective across all fields, specially in Social Media. As expected, managing own business is key for entrepreneurship students

What was primary motivation to study at IEBS? – Drill down by respondent profile, gender and nationality

Motivations and objectives

Shorter courses seem to stand out slightly for learning new things and keeping updated, while a full master program will help more on growing professionally

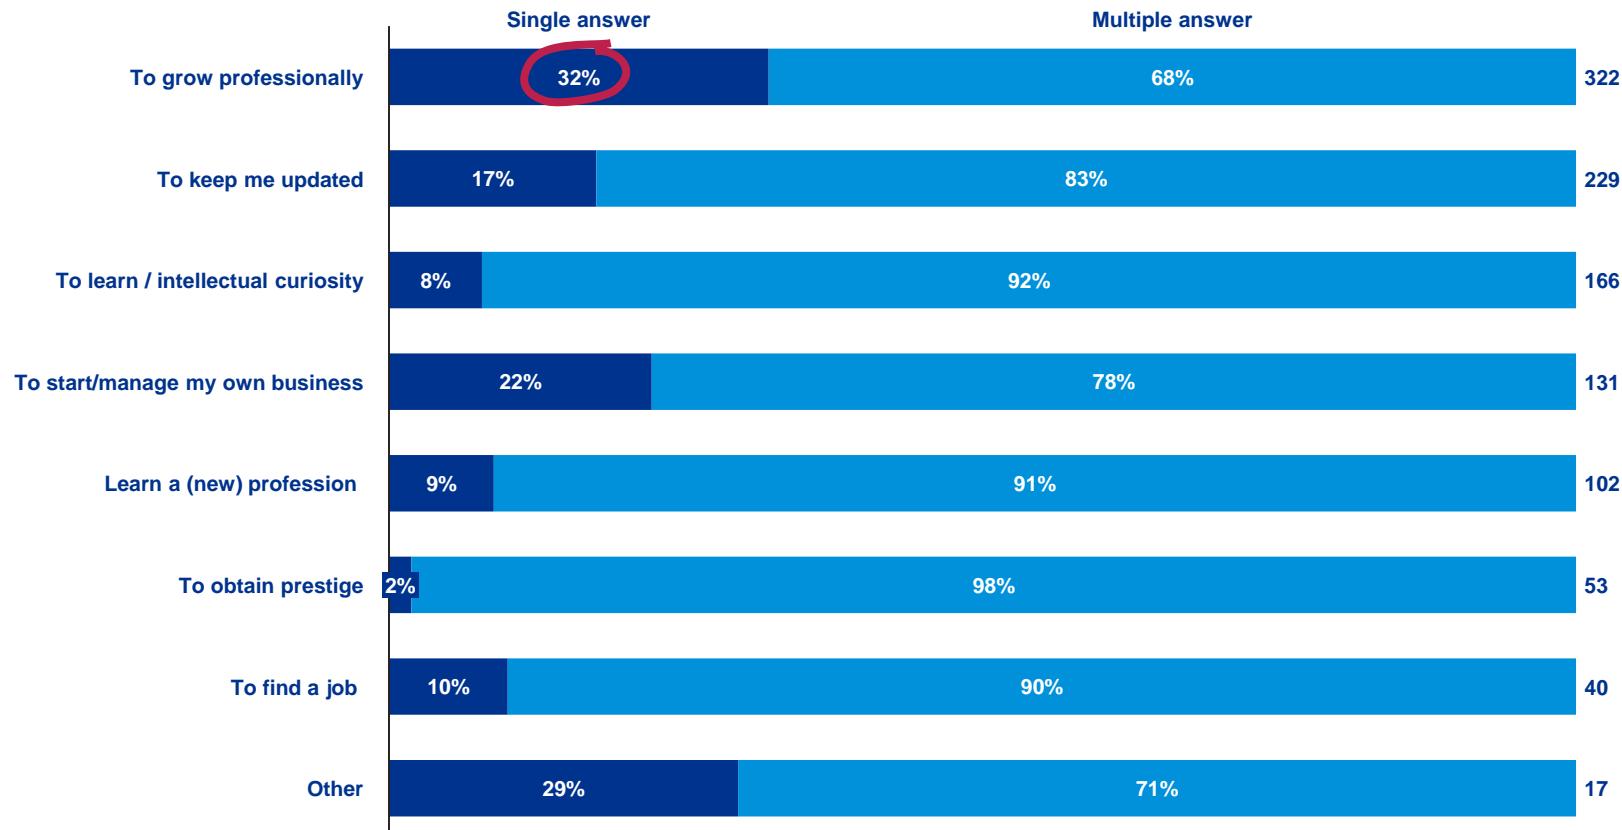

What was primary motivation to study at IEBS? – Drill down by respondent profile, gender and nationality

Motivations and objectives

Not only growing professionally is the most selected answer, it is also the most selected as a single answer, suggesting strongly it is a key driver for choosing IEBS

What was primary motivation to study at IEBS?

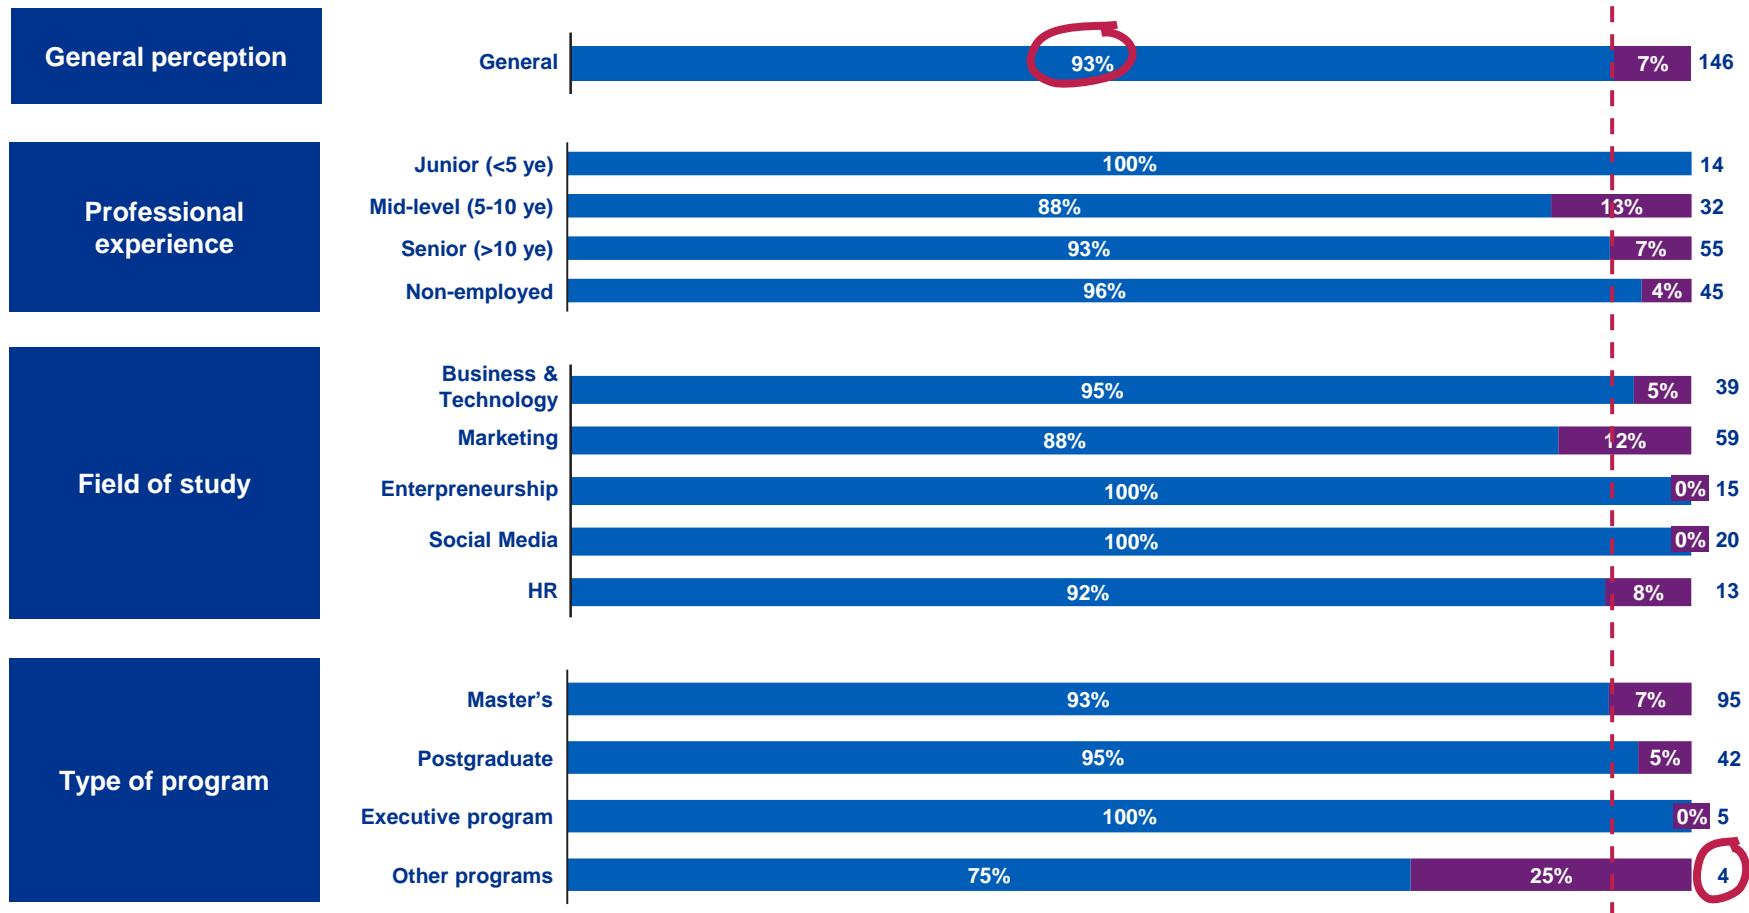

Motivations and objectives

A positive rate of 93% of alumni considered they achieved their goals. Only shorter courses seem not to meet expectations, but with very little significance

Do you consider you have achieved your goals? (only alumni)

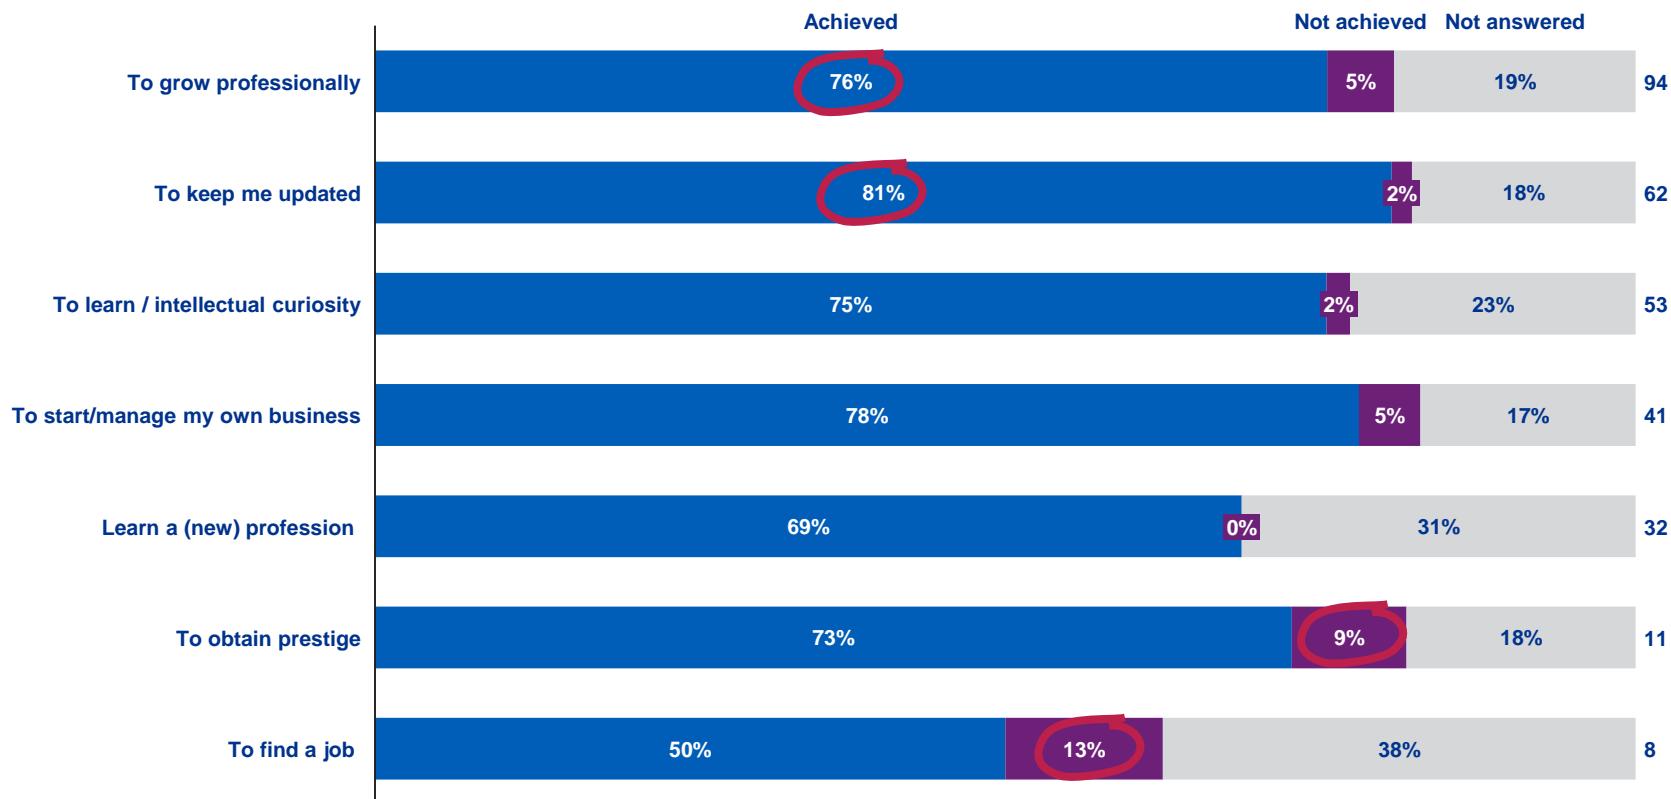

█ Achieved █ Not achieved

Motivations and objectives

Feedback is positive for key objectives, but prestige and finding a job show some more negative feedback, typically weaker aspects of online education...

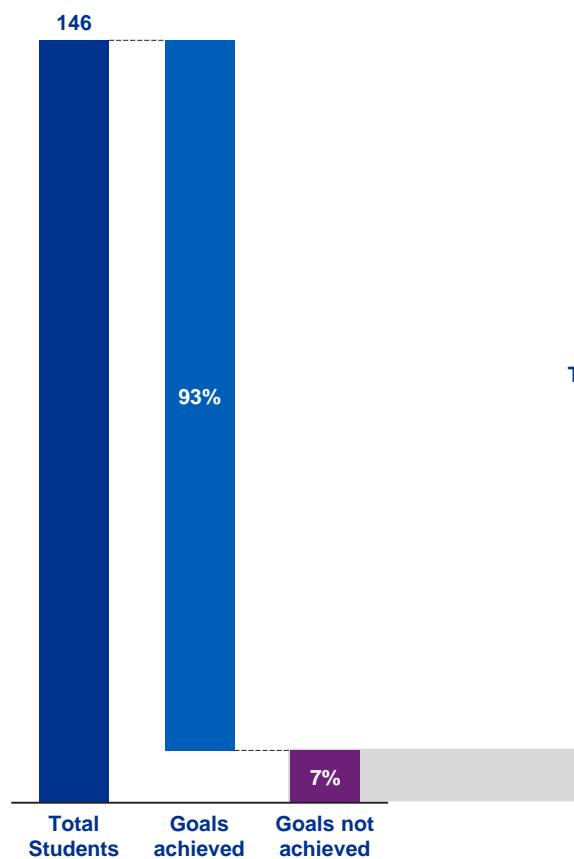

Do you consider you have achieved your goals? (only alumni)

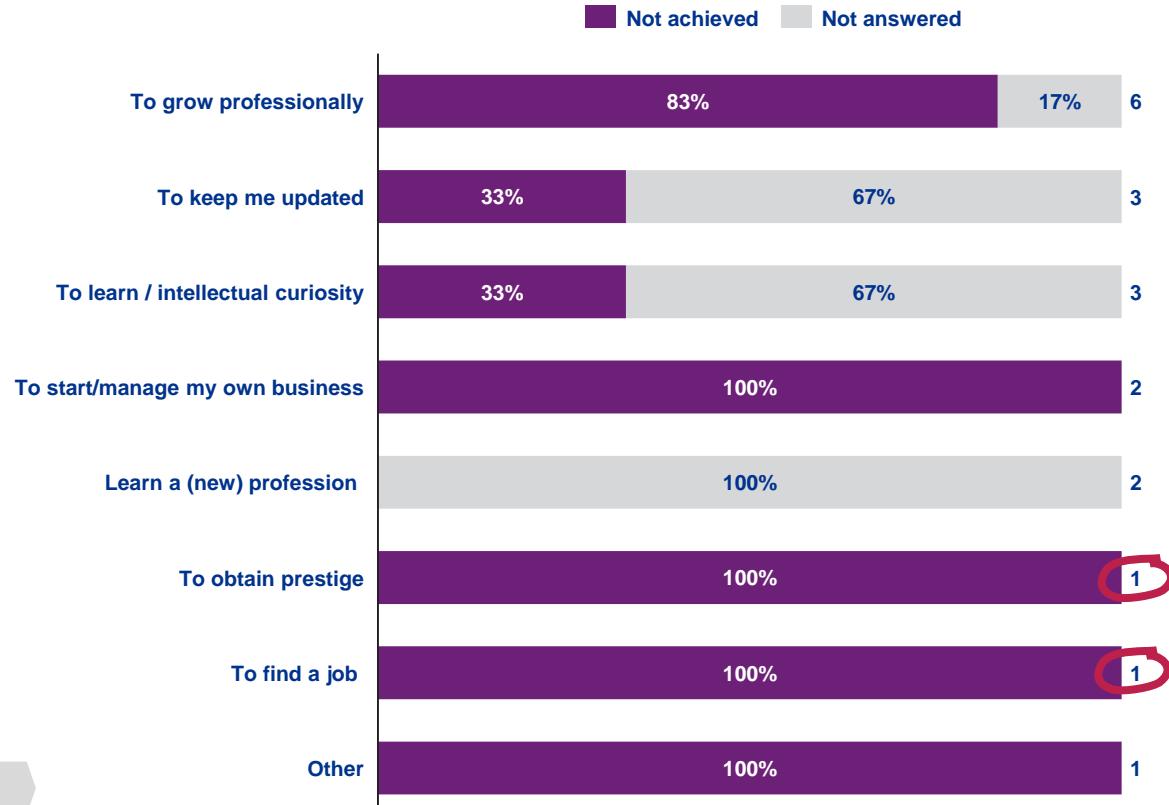

Motivations and objectives

But really these are very isolated cases, as very few respondents considered not to have achieved their objectives

Do you consider you have achieved your goals? (only alumni)

What goals haven't you achieve?

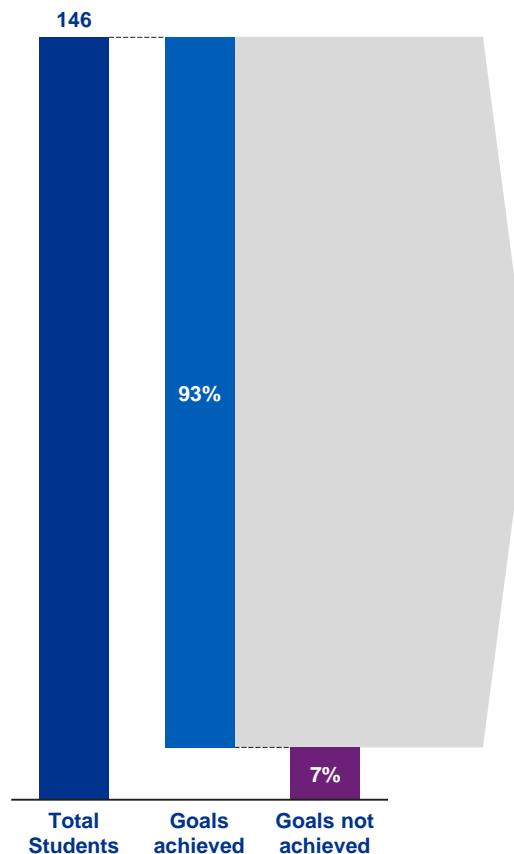

Motivations and objectives

On the contrary, the level of respondents who actively consider they achieved their objectives is generally high, again the only outlier being finding a job

Do you consider you have achieved your goals?

(only alumni)

How has IEBS helped you achieve your goal?

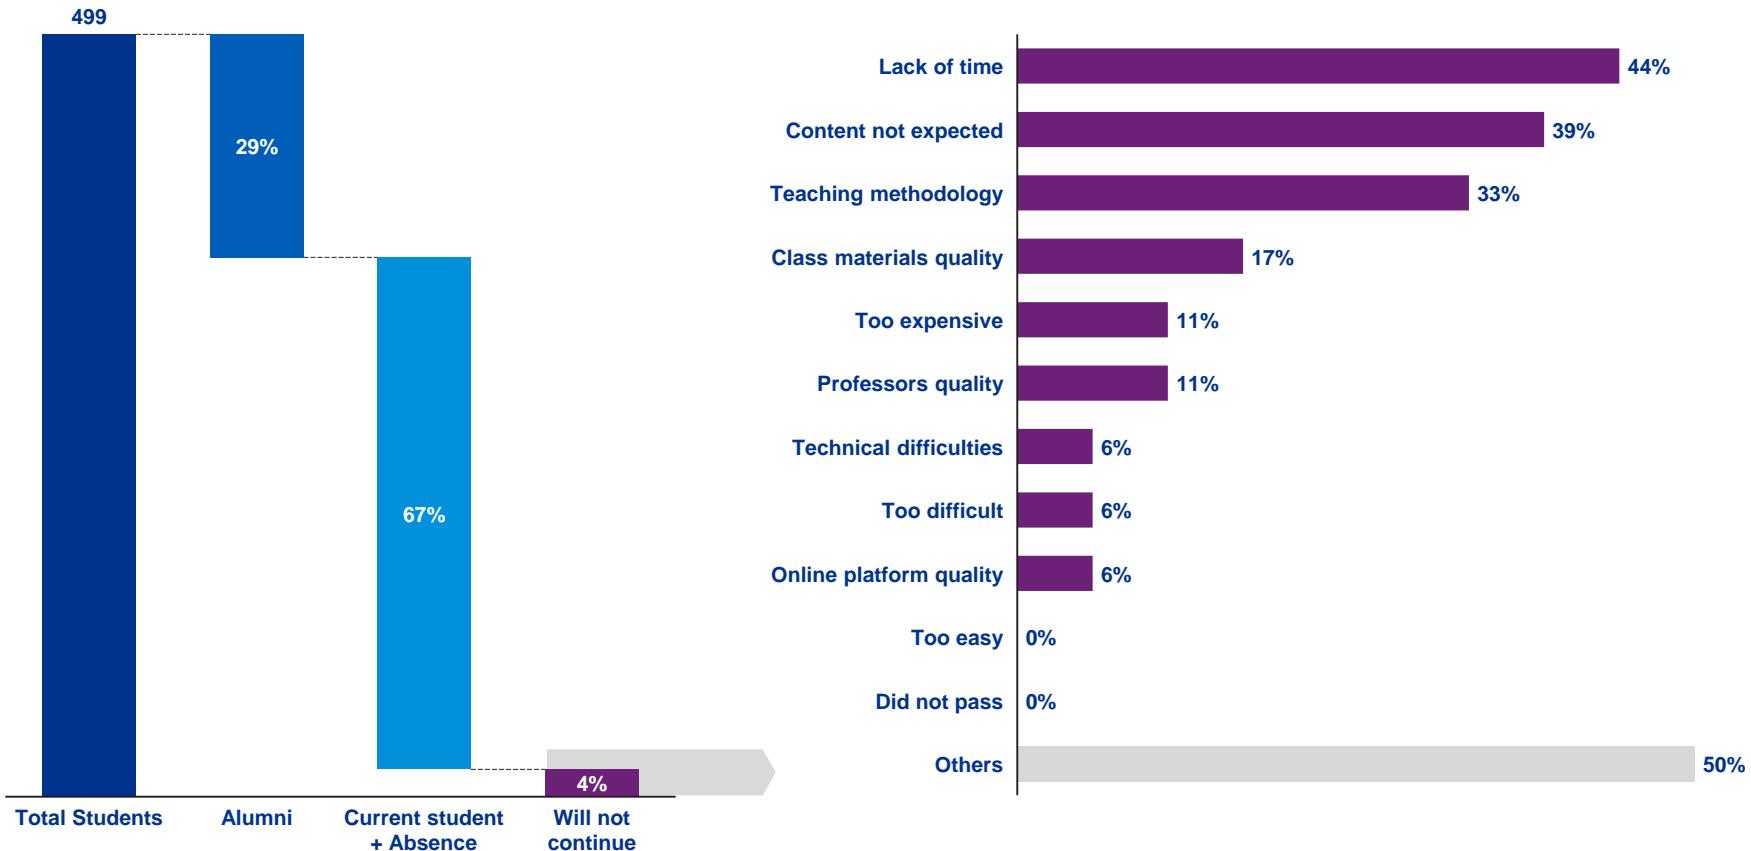

Achieved Not answered

Motivations and objectives

The high level of satisfaction with the achievement of goals leads to low drop rate, and normally attributed to lack of time and other personal reasons

What are the reasons why you didn't / won't complete the program?

Competitive landscape

Competitive landscape

There is a wide offer of online business schools, but IEBS seem to be well positioned, showing good prestige and good levels of satisfaction

Competitive landscape

- The number of universities / institutions competing in the online business-related education market is very high, so competition is expected to be very intense for IEBS
- Nevertheless, among IEBS students, c.40% considered only IEBS as an option for their course and c.80% considered a maximum of 2 additional universities. These results show that, although competition is high in terms of number of universities, IEBS students usually consider a quite limited range of options and IEBS seems to be well positioned
- Regarding the proposed university ranking made by IEBS students based on their prestige / perceived quality, the following findings are identified:
 - IEBS appears as the top school, which indicates both a perceived quality of the school compared to other alternatives, as well as IEBS meeting students expectations
 - Some key competitors are made clear already from this ranking, with IE and ESIC standing out as the best rated after IEBS, and as can be observed later, being the major direct competitors
 - On the other hand, the ranking in terms of prestige for the rest of universities is far from the actual universities that students consider as real alternatives to IEBS, which might indicate that selection of the online courses is not based mainly on the prestige of the universities
- But also, when taking a deeper look into selected schools as alternatives to IEBS, we observe that many of them are barely known, and might be considered of quality or prestigious by those who know the school, but seem not to be a direct competition at the moment
- IEBS should look out, as this schools might improve their positioning to reach to a wider audience and maintaining the perception of prestige, might become a stronger threat

Competitive landscape

IE and ESIC are the clear frontrunners, with UOC, UNIR and UE also being direct competitors and a seemingly decreasing threat of other less known schools

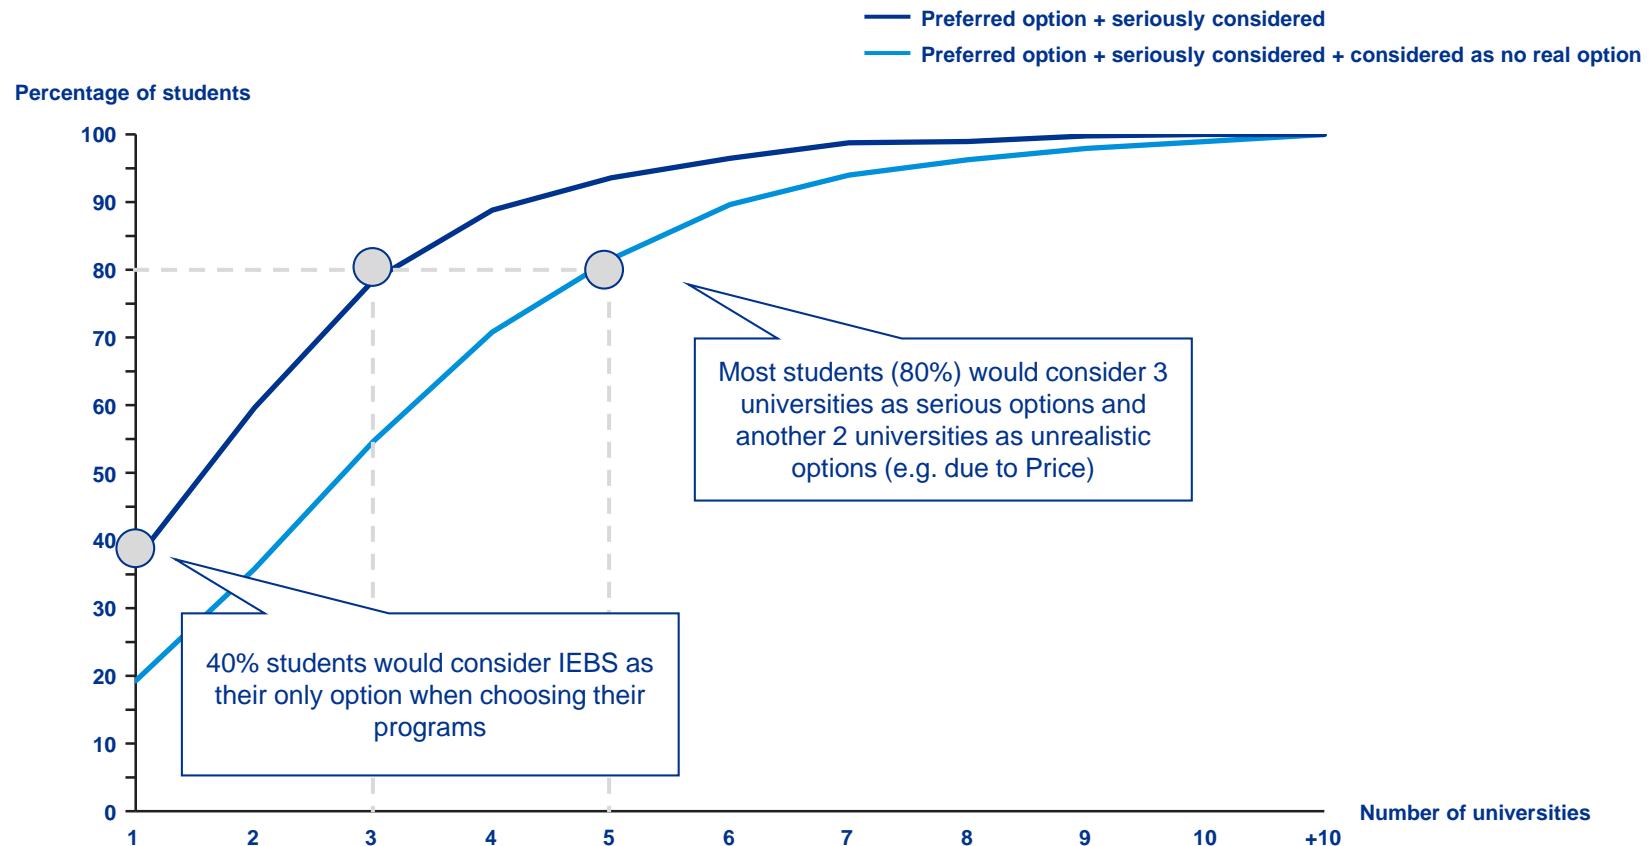

Direct competition

- So the previous ranking gives some indication of general prestige and brand positioning, but seems not as relevant considering the high level of ignorance about many of these online schools. Therefore, when presented with a set of schools and based on what alternatives respondents actually considered, we defined the direct competitors:
 - IE University and ESIC are positioned as the Tier 1 competitors for IEBS, with 17% and 15% respectively of students who considered them as real alternatives
 - In Tier 2, we find UOC, UNIR and UE, with percentages of 12%, 11% and 8% respectively
 - It is worth highlighting the competition from onsite universities, both private and public, that represent 17% and 14%. However, they are also options most frequently known but not considered (35% and 41% respectively)
 - As for the rest of online schools, we can observe a low level of awareness, generally above 70%, which again points towards the good positioning of IEBS
- IEBS positioning become even more relevant, as we observe difference in perception between Alumni and Current students. The latest seem to know less and less about the lower tier competitors, and tend to concentrate among best known schools, including onsite universities. So the threat of less known schools seems to be actually diminishing
- Concerning IEBS positioning among other alternatives, we can also observe that, as expected, the minor Spanish online schools are noticeably less known in Latin America than in Spain. Latin America probably has a lower offer of online schools as Latin American students frequently consider onsite private universities (28%) as an alternative compared to Spanish respondents (10%)
- When comparing the two major fields of study, it can be observed that due to the poorer performance of marketing courses (as shown by achievement of objectives and will be shown by IEBS performance), students do consider more seriously other options for marketing courses than for Business & Tech where IEBS maintains good reputation
- Lastly, we observe that alternatives are also more seriously considered when choosing a master course than a shorter one like a postgraduate, which probably has not to do so much with the quality of the program (IEBS generally performs better in longer courses) but the fact that a longer course is a more important decision, being a bigger commitment and a bigger expenditure, and therefore a more pondered decision process is expected

Competitive landscape

Despite a wide offer of online schools, c.40% of respondents considered only IEBS for their course and c.80% seriously considered only 2 additional universities

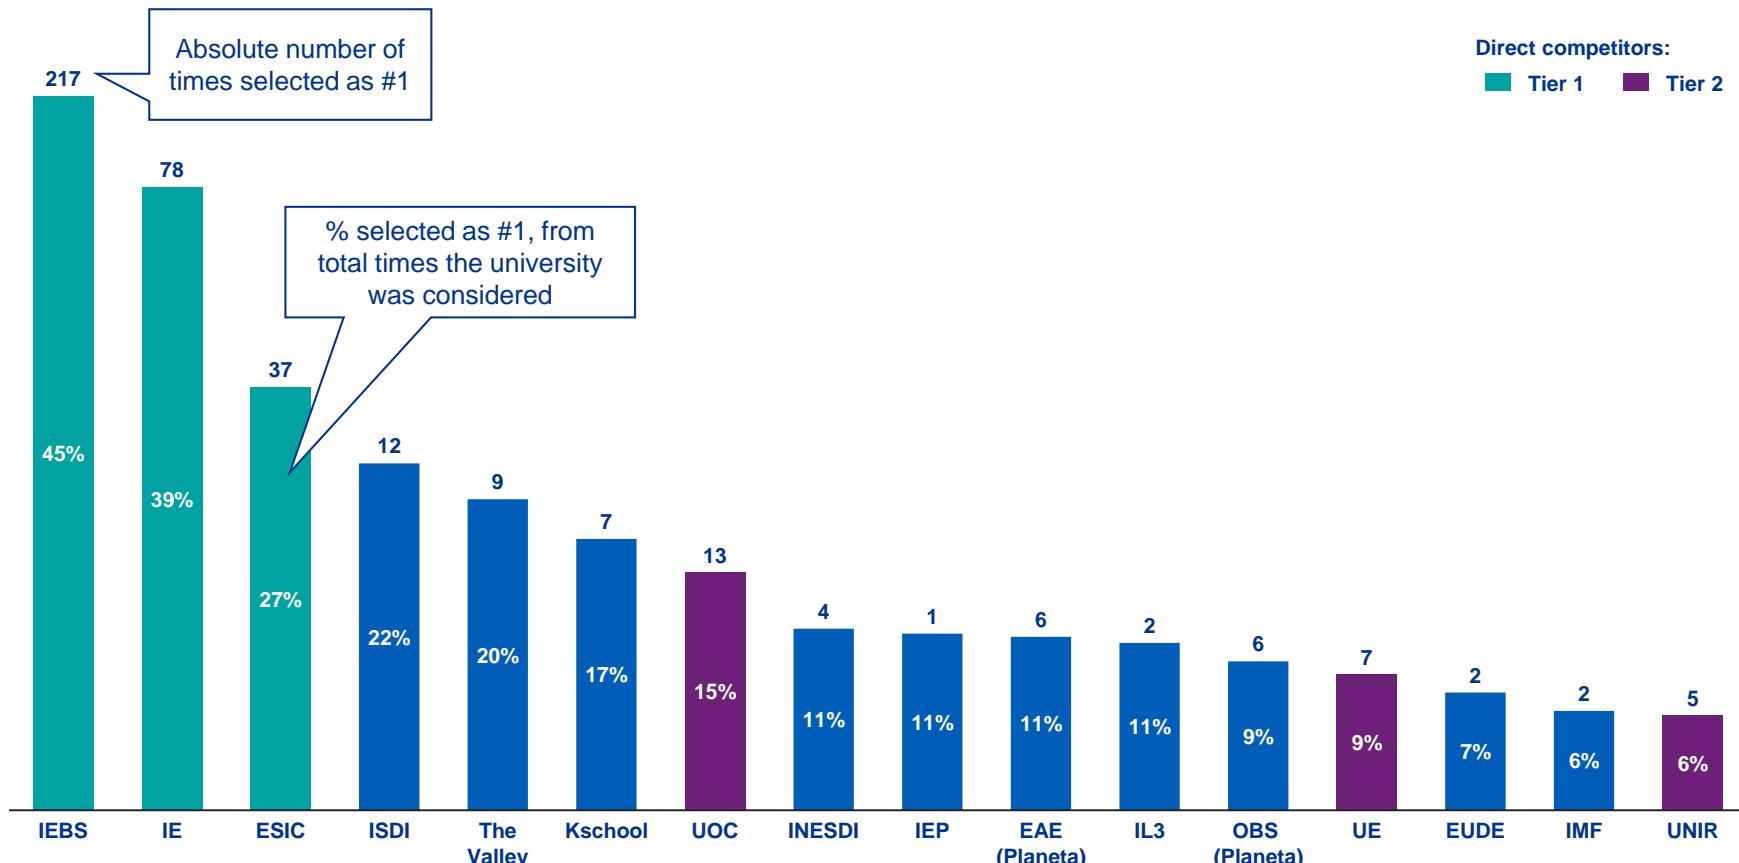

How many universities / institutions did you consider before enrolling in your course?

Competitive landscape

Ranking university prestige from those selected as alternatives for their course, IEBS stands out as number 1 even before well recognized schools such as IE

What university is your top preference in terms of quality/ prestige?

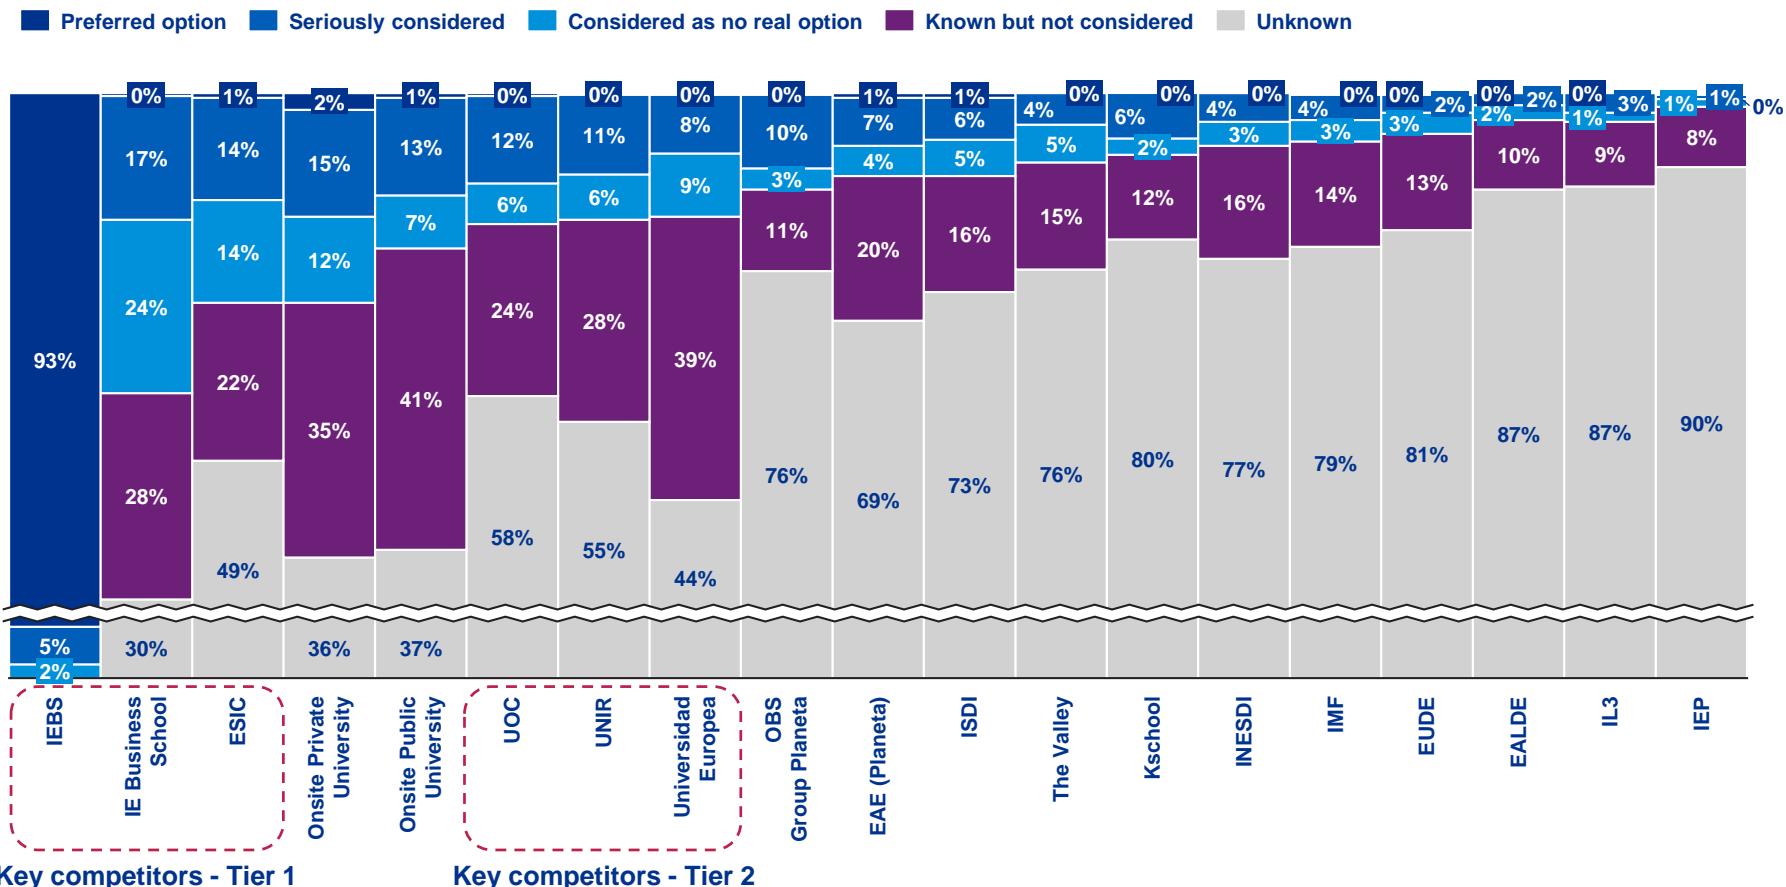

Note: see Appendix 1 for more detailed analysis (drill down by student profile))

Competitive landscape

Despite this ranking many online schools are noticeably unknown, and aside from onsite universities, we have defined a Tier 1 and Tier 2 set of direct competitors

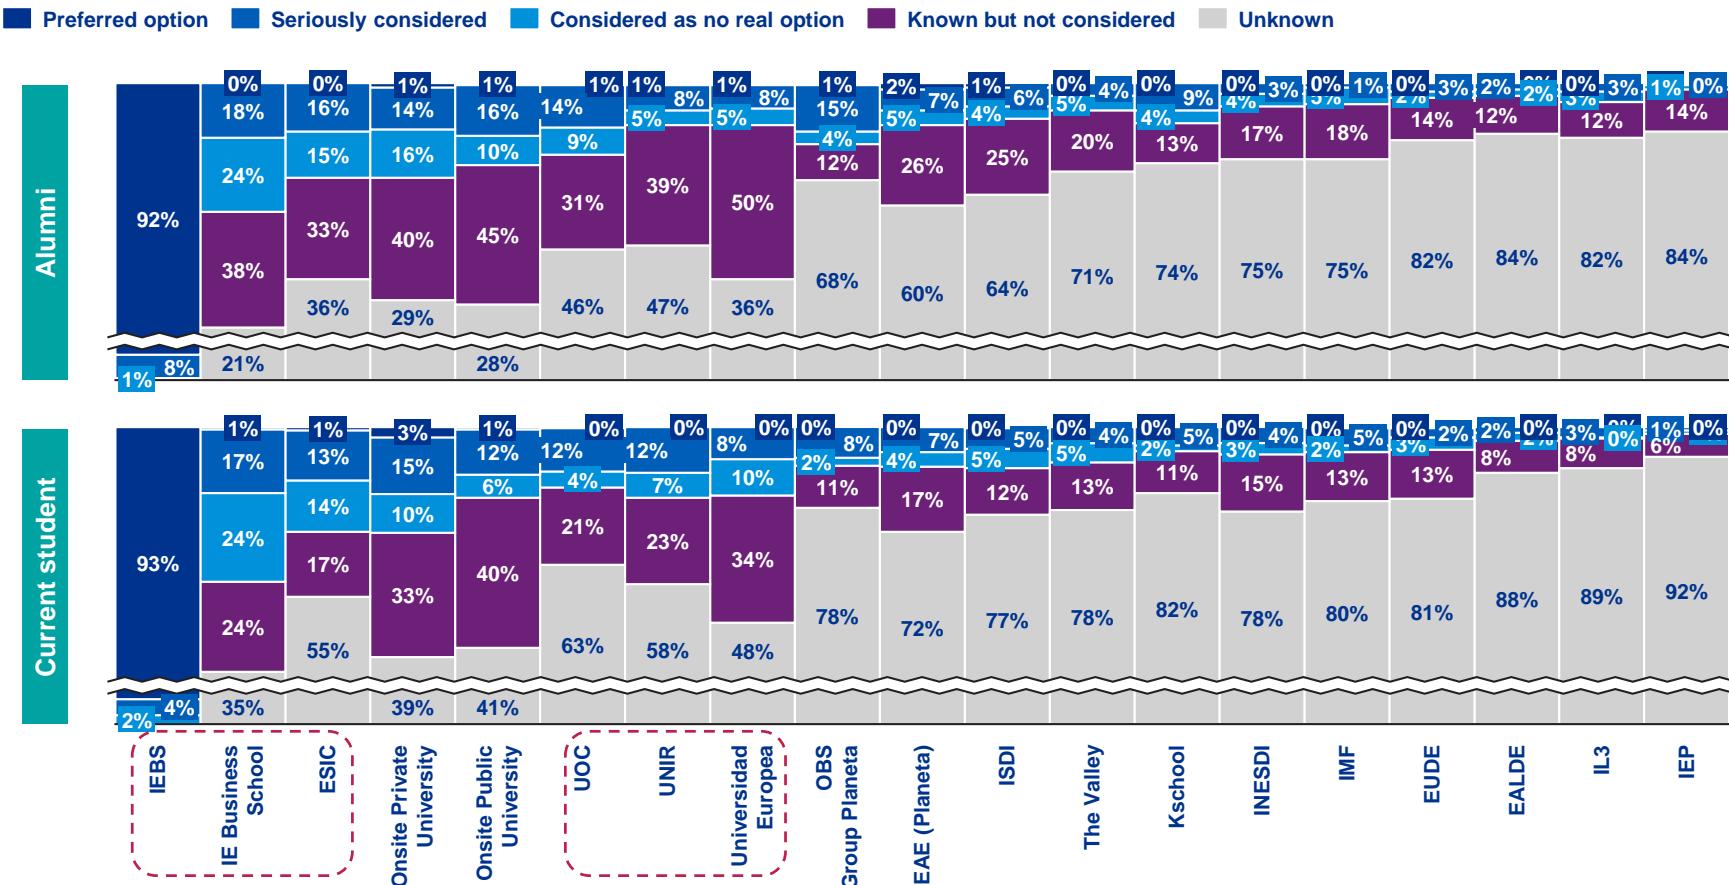

What private online universities / institutions did you consider?

Competitive landscape

Current students seem to know less of the alternatives and tend to concentrate on better known schools for their preferred and seriously considered options

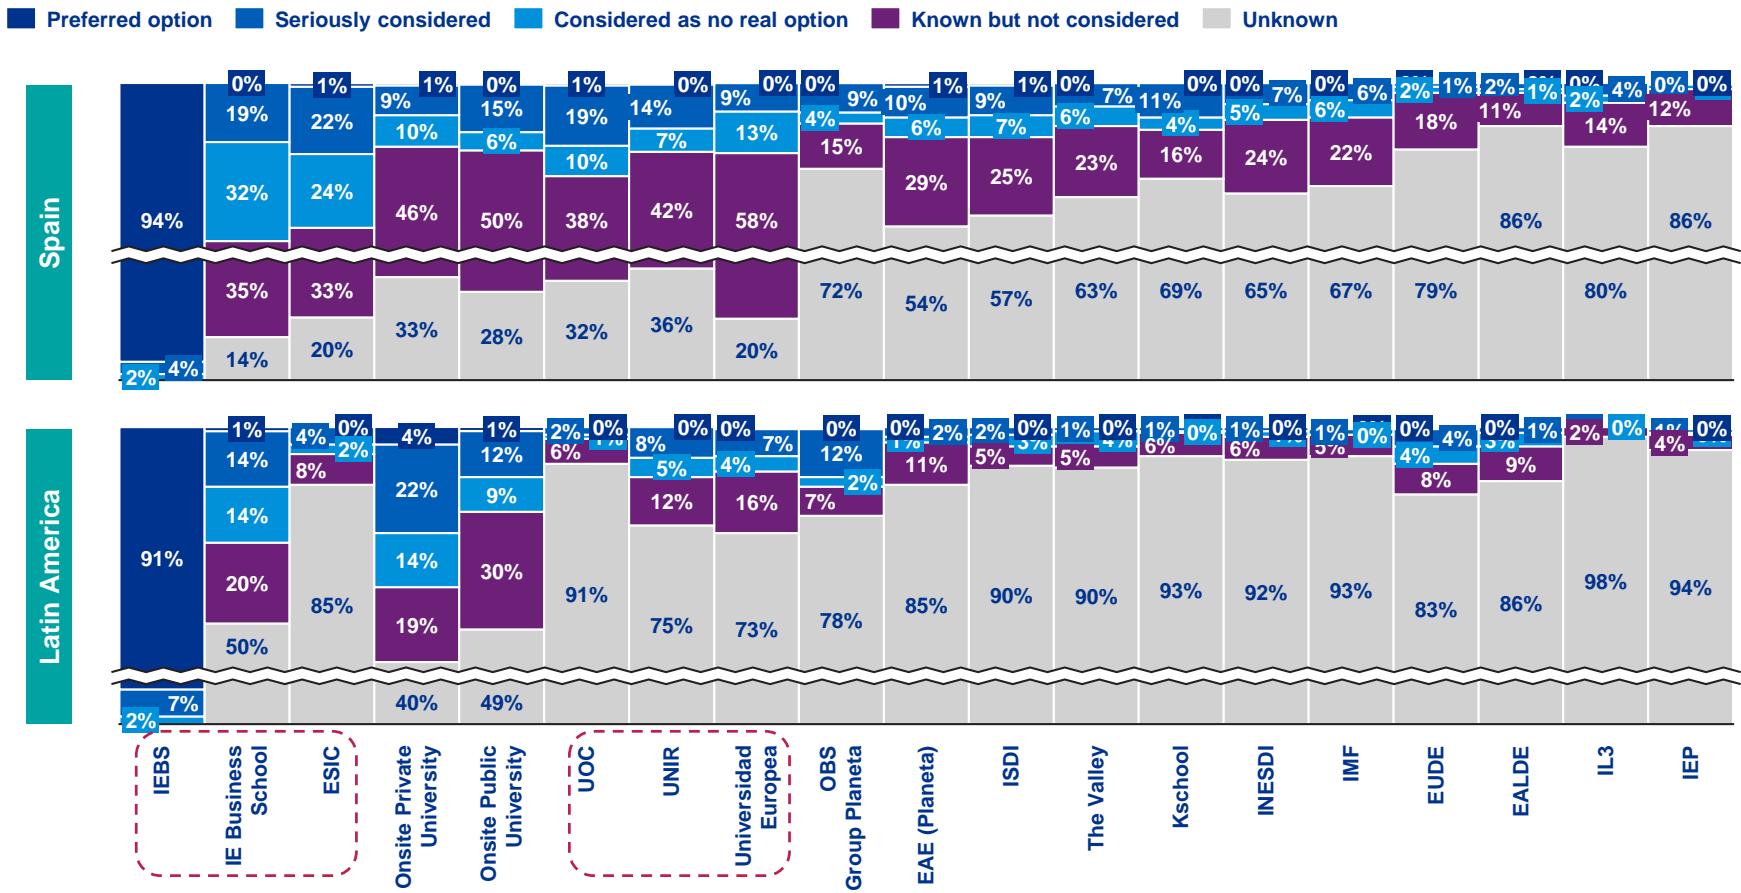

What private online universities / institutions did you consider? – Drill down by respondent profile¹

Competitive landscape

As expected, students from Latin America are less aware of Spanish universities and consider more onsite private universities (28%) compared to Spanish ones (10%)

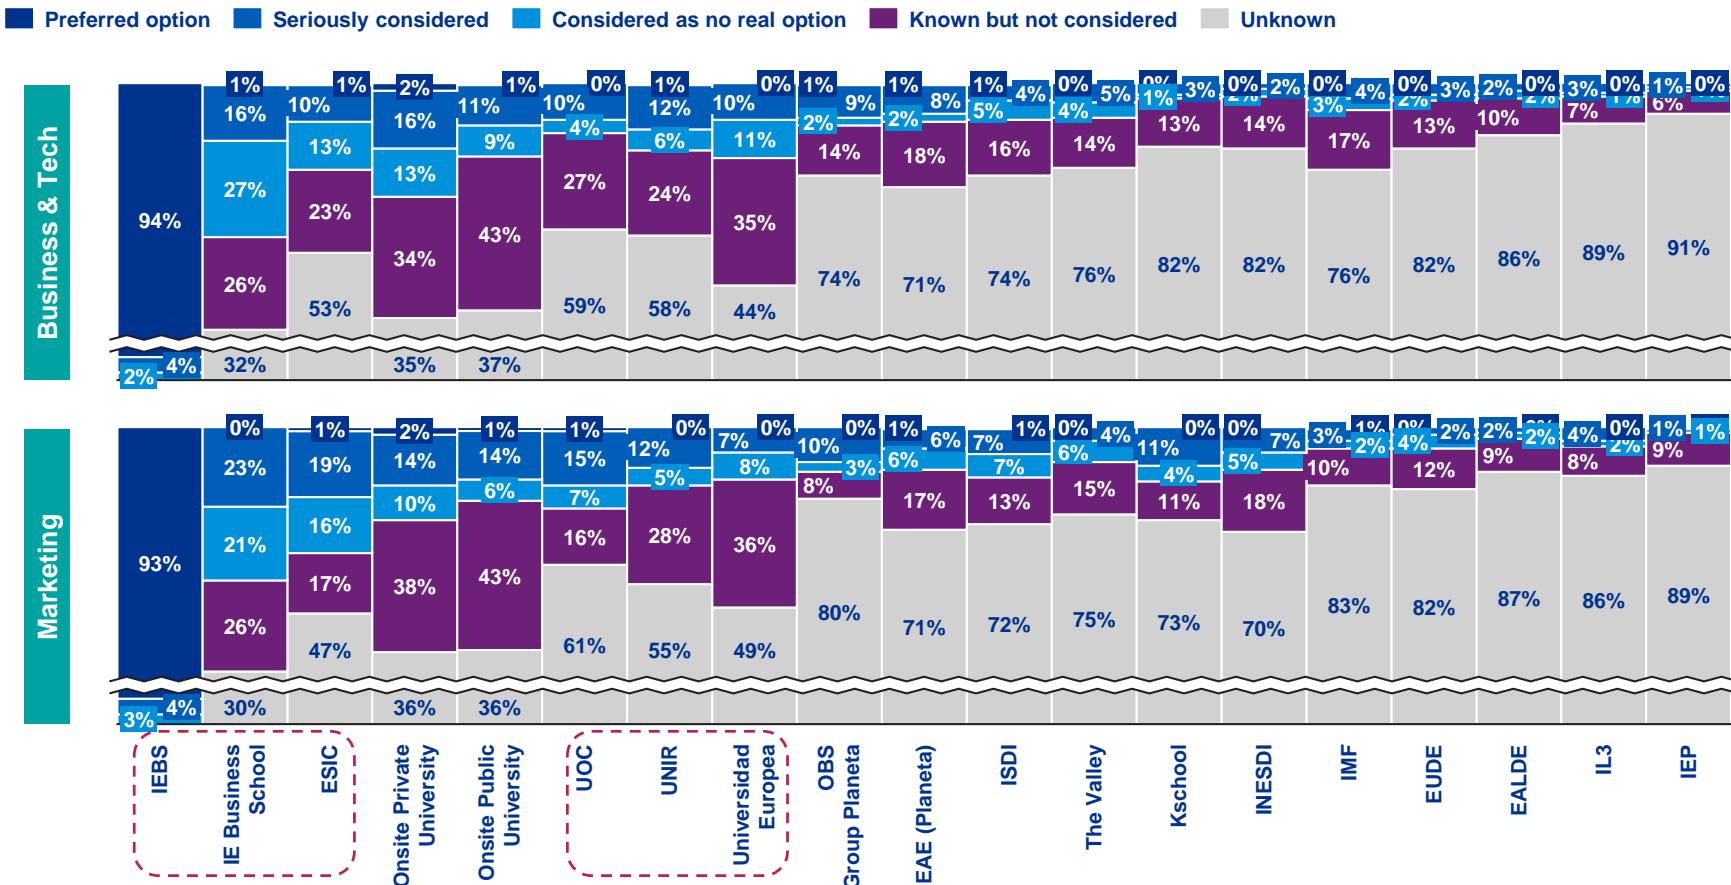

What private online universities / institutions did you consider? – Drill down by nationality

Competitive landscape

Competition for IEBS seems higher for marketing than for Business & Tech courses since IEBS generally performs much better in business than marketing

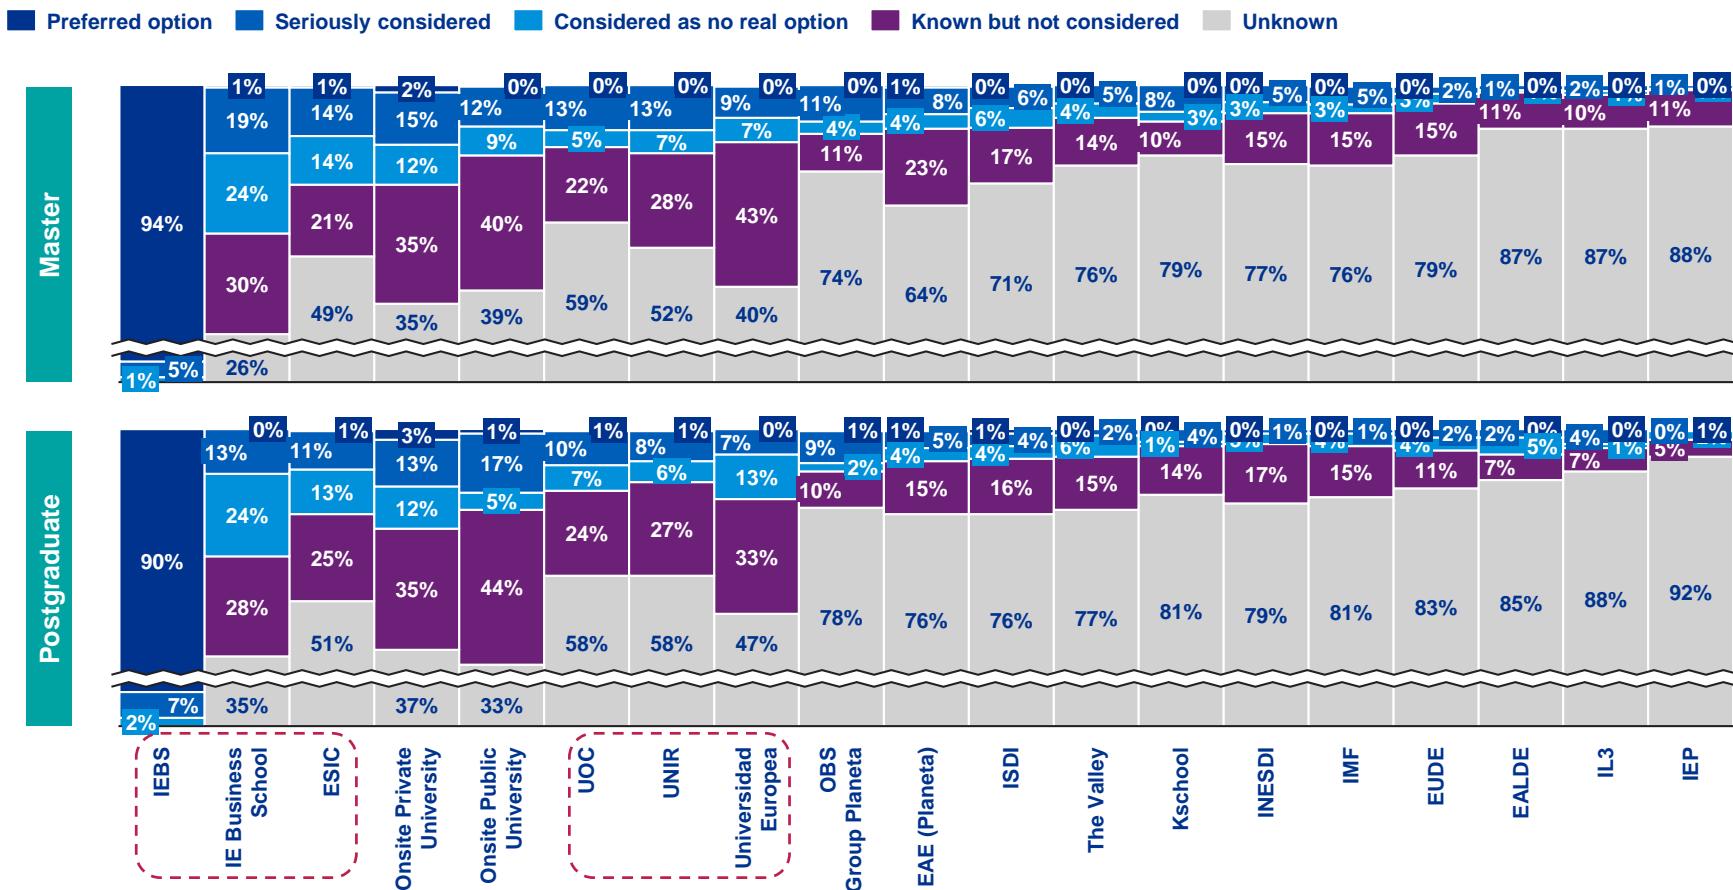

What private online universities / institutions did you consider? – Drill down by field of study

Competitive landscape

Overall, it seems that students of a master programs will seriously considered other direct competitors compared to students of shorter programs

What private online universities / institutions did you consider? – Drill down by type of program

KPCs and IEBS Performance

KPCs and IEBS performance

IEBS performs very well in most relevant factors, related to the quality of content, methodology and pricing, but with the weak aspect of a pure online school

KPCs	<ul style="list-style-type: none">— The results on key decision factors selected by IEBS students are expected from a pure online course:<ul style="list-style-type: none">○ The key driver is quality of the content, which is normally a relevant factor for any course○ But it also stands out the ability to complete de course 100% online— Payments conditions are also relevant, as we can observe that most students pay for their program while working, so it is understandable that this is a key factor— It is also remarkable, that some factors such as alumni and community and networking opportunities are not as relevant, probably as it is a typical weaker aspect of online universities, so expectations are low— Additionally, we need to point out, that even when “growing professionally” is the key motive, career development and other employability factors are not key when choosing IEBS, as students probably do not expect new career opportunities directly from the university, but rely on new content learned to progress on their current career
IEBS perception	<ul style="list-style-type: none">— Generally, IEBS performs very well among those factors considered more important. All, teaching resources, professor quality, teaching methodology and prestige, are considered as good or very good by more than 80% of students. This is specially important considering that quality of content (teaching resources) is the key factor to select the course— Moreover pricing, which includes tuition and discounts which seem relevant, but more importantly payment conditions (top 3 KPC) is perceived as good or very good by 90% of students, which seems to be a differential factor for IEBS— There are other criteria less valued, but which as noted previously, are expected not to be as relevant when selecting an online course:<ul style="list-style-type: none">○ IEBS is only considered good or very good in terms of student experience by 73% of students...○ ...and only 53% of students in the case of employability— This seems to be primarily due to the lower possibilities of networking and creating a community online compared to onsite universities. Similarly there are less opportunities for new career opportunities arising from relationship with professors, or companies, on-campus, etc. This probably explains, why there is no strong negative opinion either, but rather a neutral perception of IEBS

Note: see Appendix 1 for more detailed analysis (drill down by student profile)

KPCs and IEBS performance

Compared to competitors, IEBS stands out in terms of quality, and pricing becomes a differential factor, with opportunities to improve leveraging on UE structure

IEBS vs direct competition perception

- The strengths of IEBS are clearer when compared to relevant direct competitors. IEBS students perceive IE University and ESIC (Tier 1 competitors) as the best universities, aligned with the overall ranking and their consideration of alternatives
- As for Tier 2 universities (UOC, UE and UNIR), the results are mixed. UOC is perceived generally at Tier 1 level, while the EU and UNIR are at a midpoint of the total spectrum of universities
- Additionally, it is worth highlighting the good perception that IEBS students have of other universities such as The Valley, EAE and ISDI. But as mentioned earlier, being widely unknown, they seem not such a direct threat
- Regarding the comparison of universities by factor, the following conclusions are drawn:
 - IEBS students perceive IE University and ESIC as slightly more prestigious universities and still considered IEBS as their preferred university, which shows that the university prestige is not the most relevant factor when choosing a online course
 - This perception purely based on prestige contradicts slightly the ranking where IEBS stood clearly as number 1, but which was also based on perceived quality, where IEBS seems to be the winner
 - It would be normal for IEBS, being a much newer player compared to IE and ESIC (c.50 years old) to not be considered as prestigious in terms of brand and history
 - But in terms of teaching quality and methodology, IEBS is perceived much better than all Tier 1 and Tier 2 competitors, as well as professor quality, where IE has a close 2nd position
 - As hinted previously, pricing is a differential factor, with a perception of 90% of students as good or very good, versus UNIR being the closest second at 44% of students considering it good or very good
 - Focusing on the worst performing factors, student experience and employability, trends are not as clear by Tier 1 and Tier 2, but as pure online players and blended players. All IE, ESIC and UE have onsite campuses and programs, which allows for certain infrastructure to leverage on for better community, networking and employability. Therefore IEBS might benefit from UE's structure and improve in these criteria

Note: see Appendix 1 for more detailed analysis (drill down by student profile)

KPCs and IEBS performance

When considering KPC, quality of content clearly stands out, but it is also remarkable that students choosing IEBS are looking for a full online program

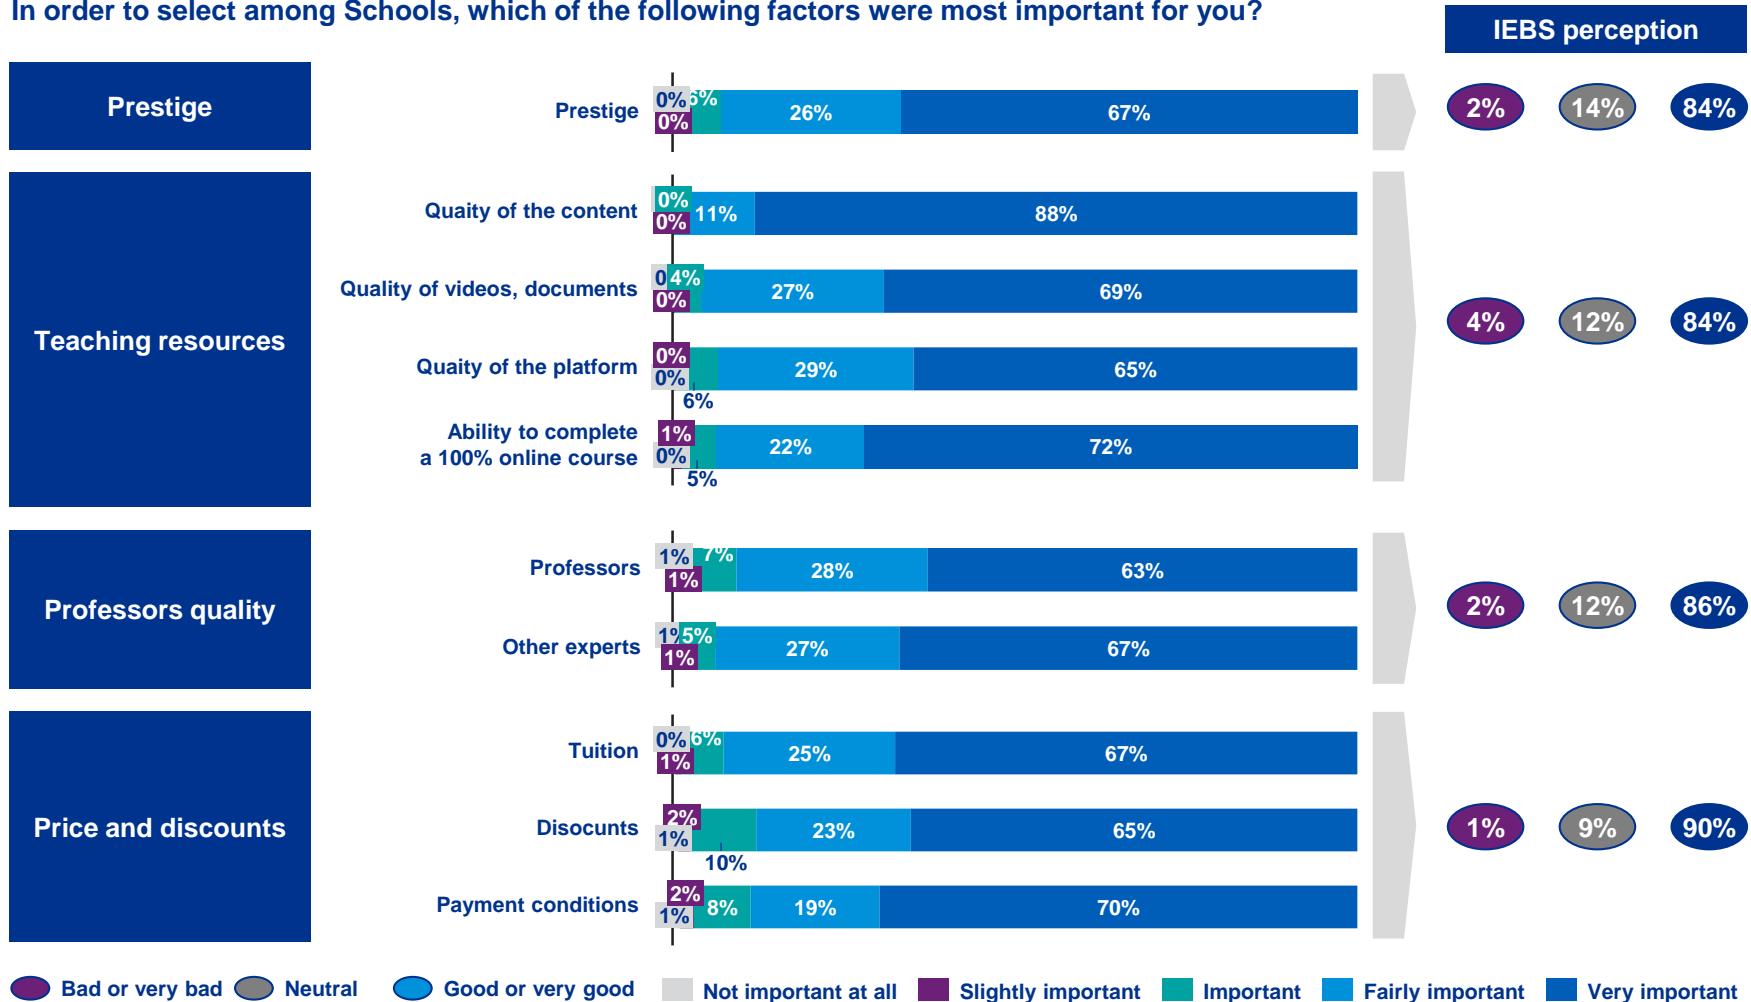

In order to select among schools, which of the following factors were most important for you? - Ranking

KPCs and IEBS performance

IEBS performs generally good on all relevant KPCs such as teaching resources, specially in pricing factors, which is consistent with the general pricing perception

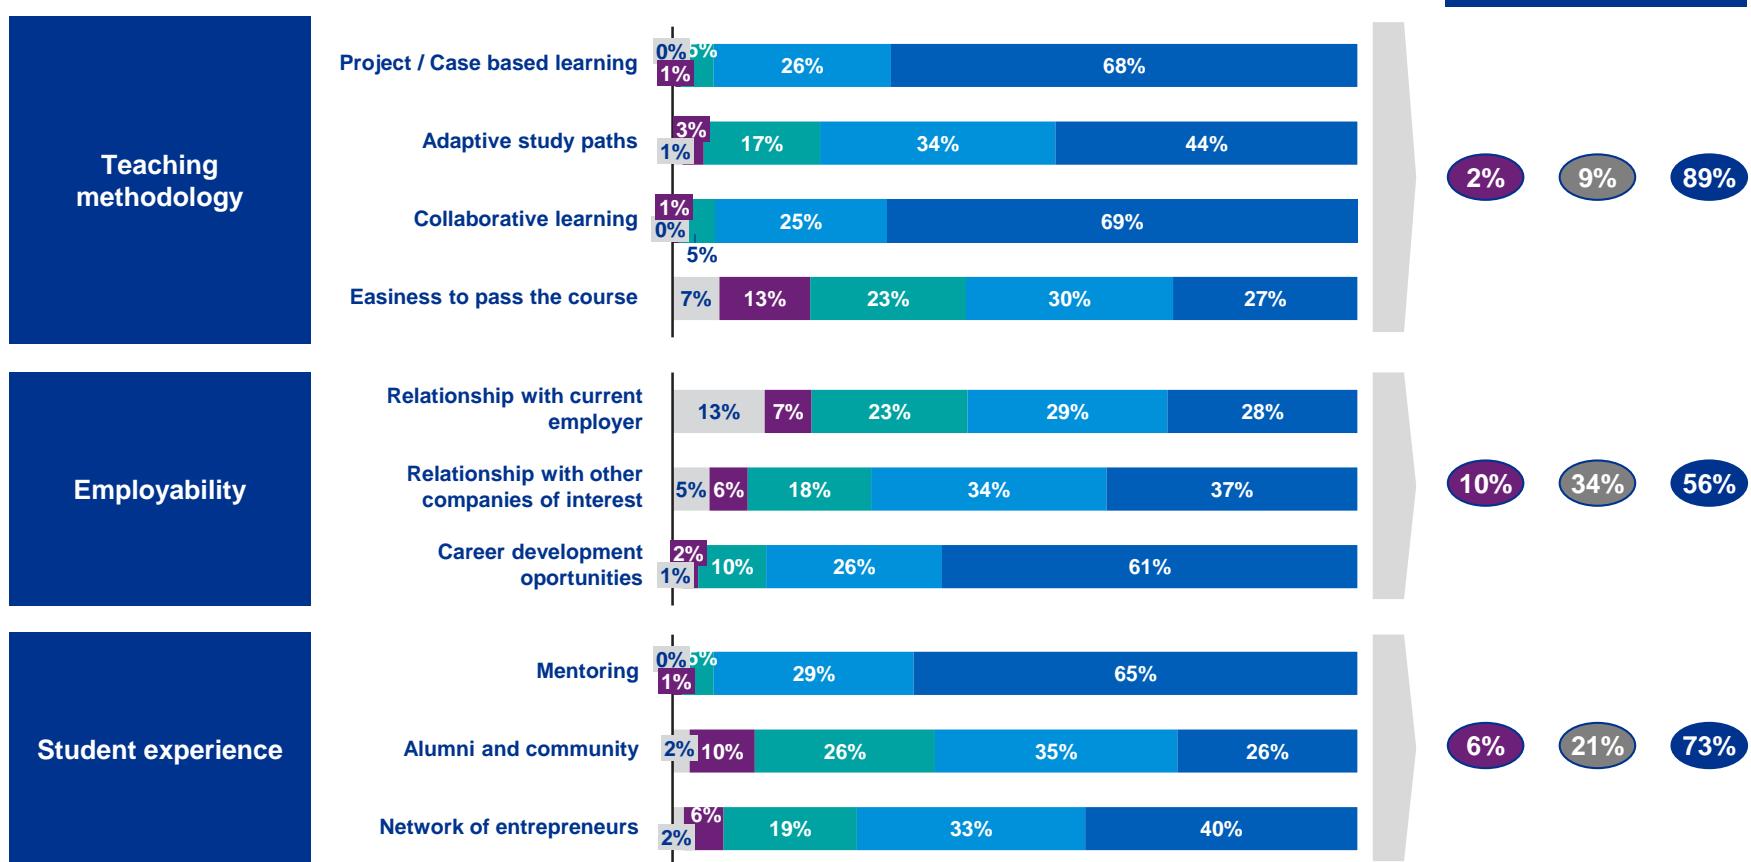

In order to select among Schools, which of the following factors were most important for you?

KPCs and IEBS performance

Employability is the factor in which IEBS performs worse, but as observed previously is a less important factor

In order to select among Schools, which of the following factors were most important for you?

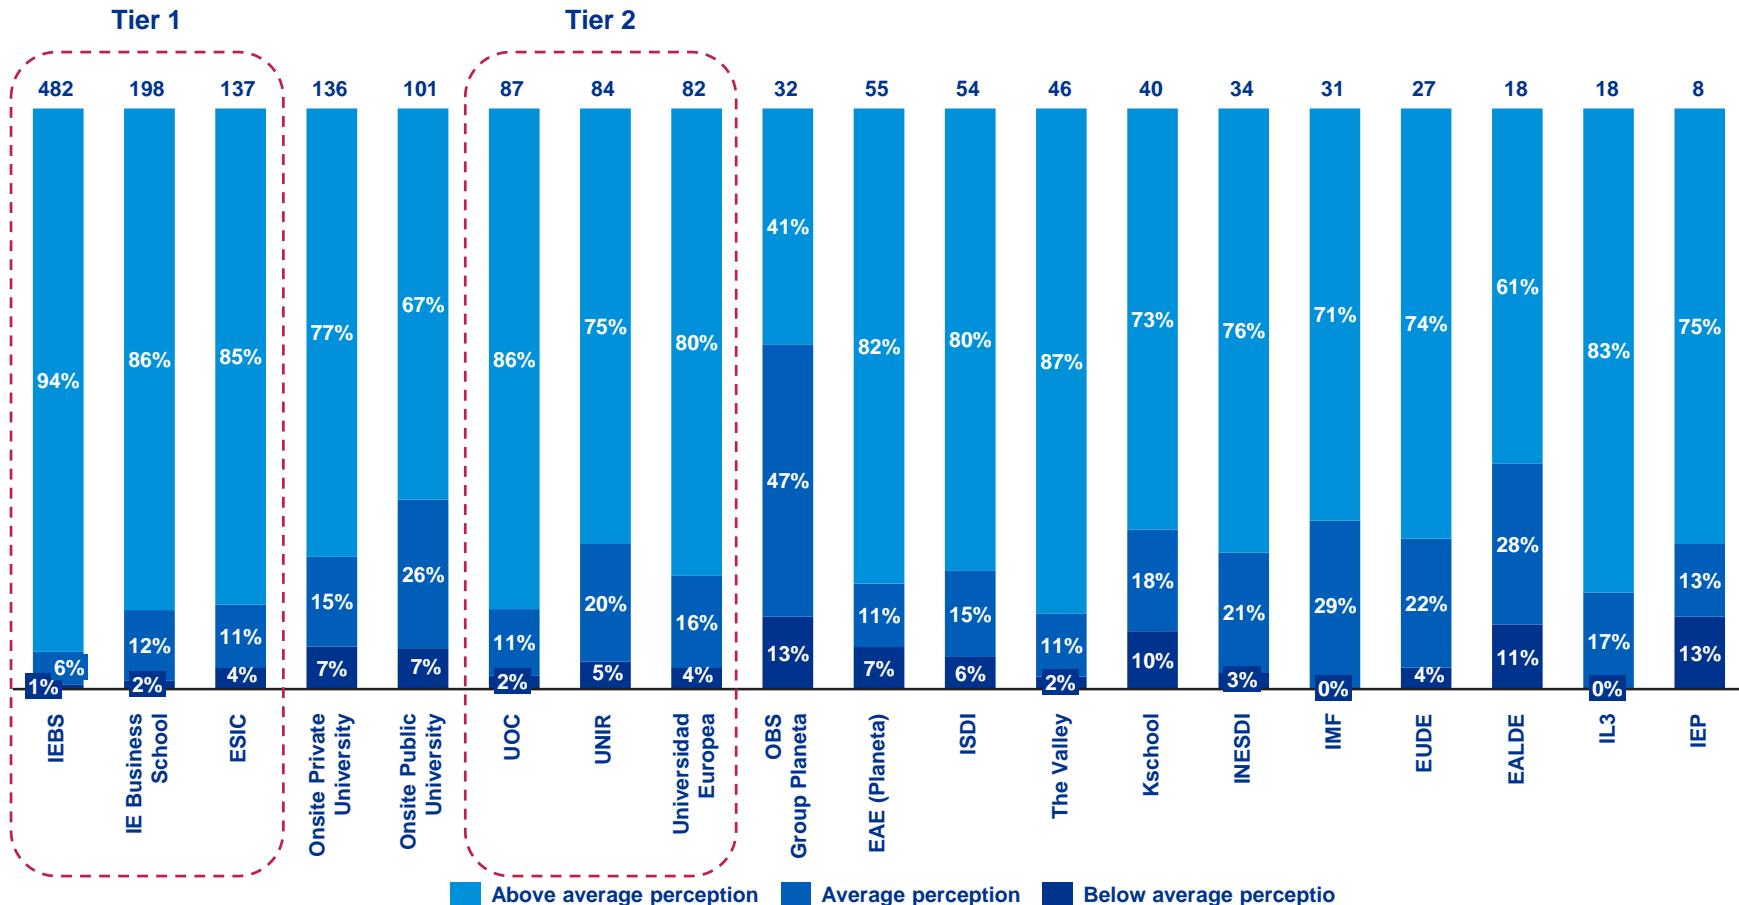

Bad or very bad Neutral Good or very good Not important at all Slightly important Important Fairly important Very important

KPCs and IEBS performance

Overall IEBS students perceive IEBS and Tier 1 competitors (IE and ESIC) as the best universities while results for Tier 2 universities (UOC, UNIR and UE) are mixed

What is your perception about the following universities? – Overall experience

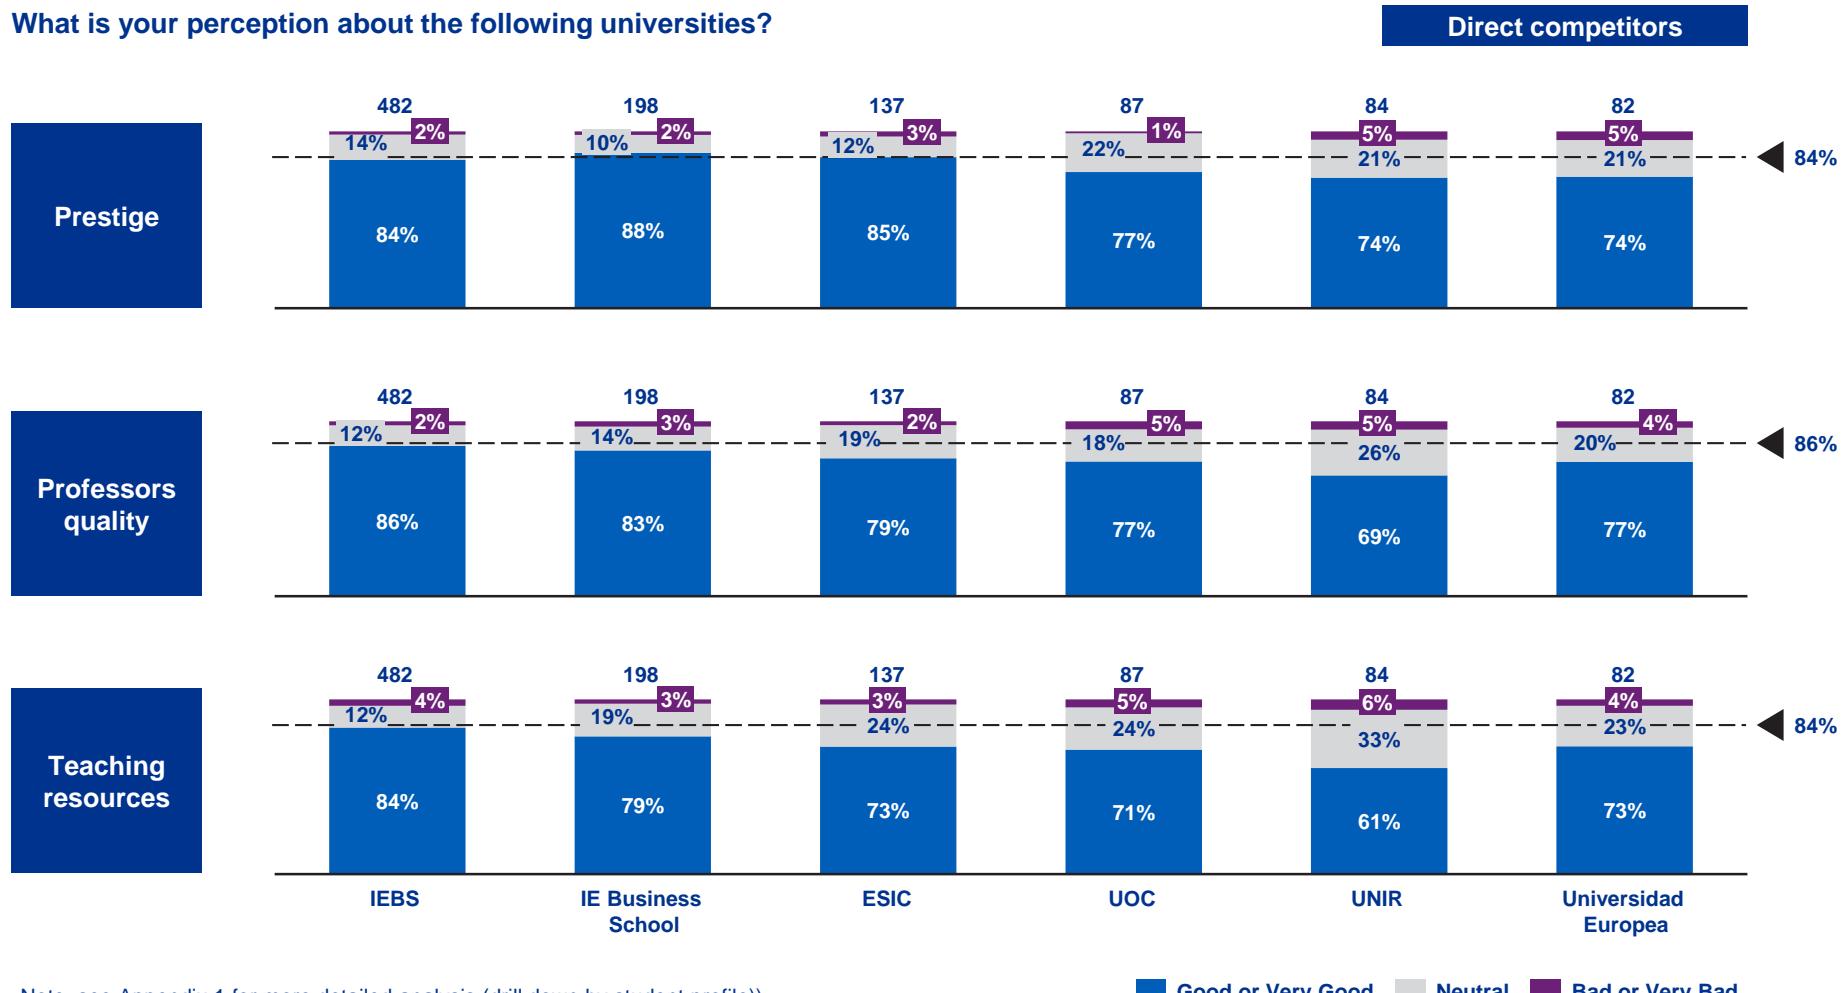

Note: see Appendix 1 for more detailed analysis (drill down by student profile)

KPCs and IEBS performance

With similar levels across Tier 1 competitors for prestige and professor quality, IEBS clearly stands out for its teaching resources...

What is your perception about the following universities?

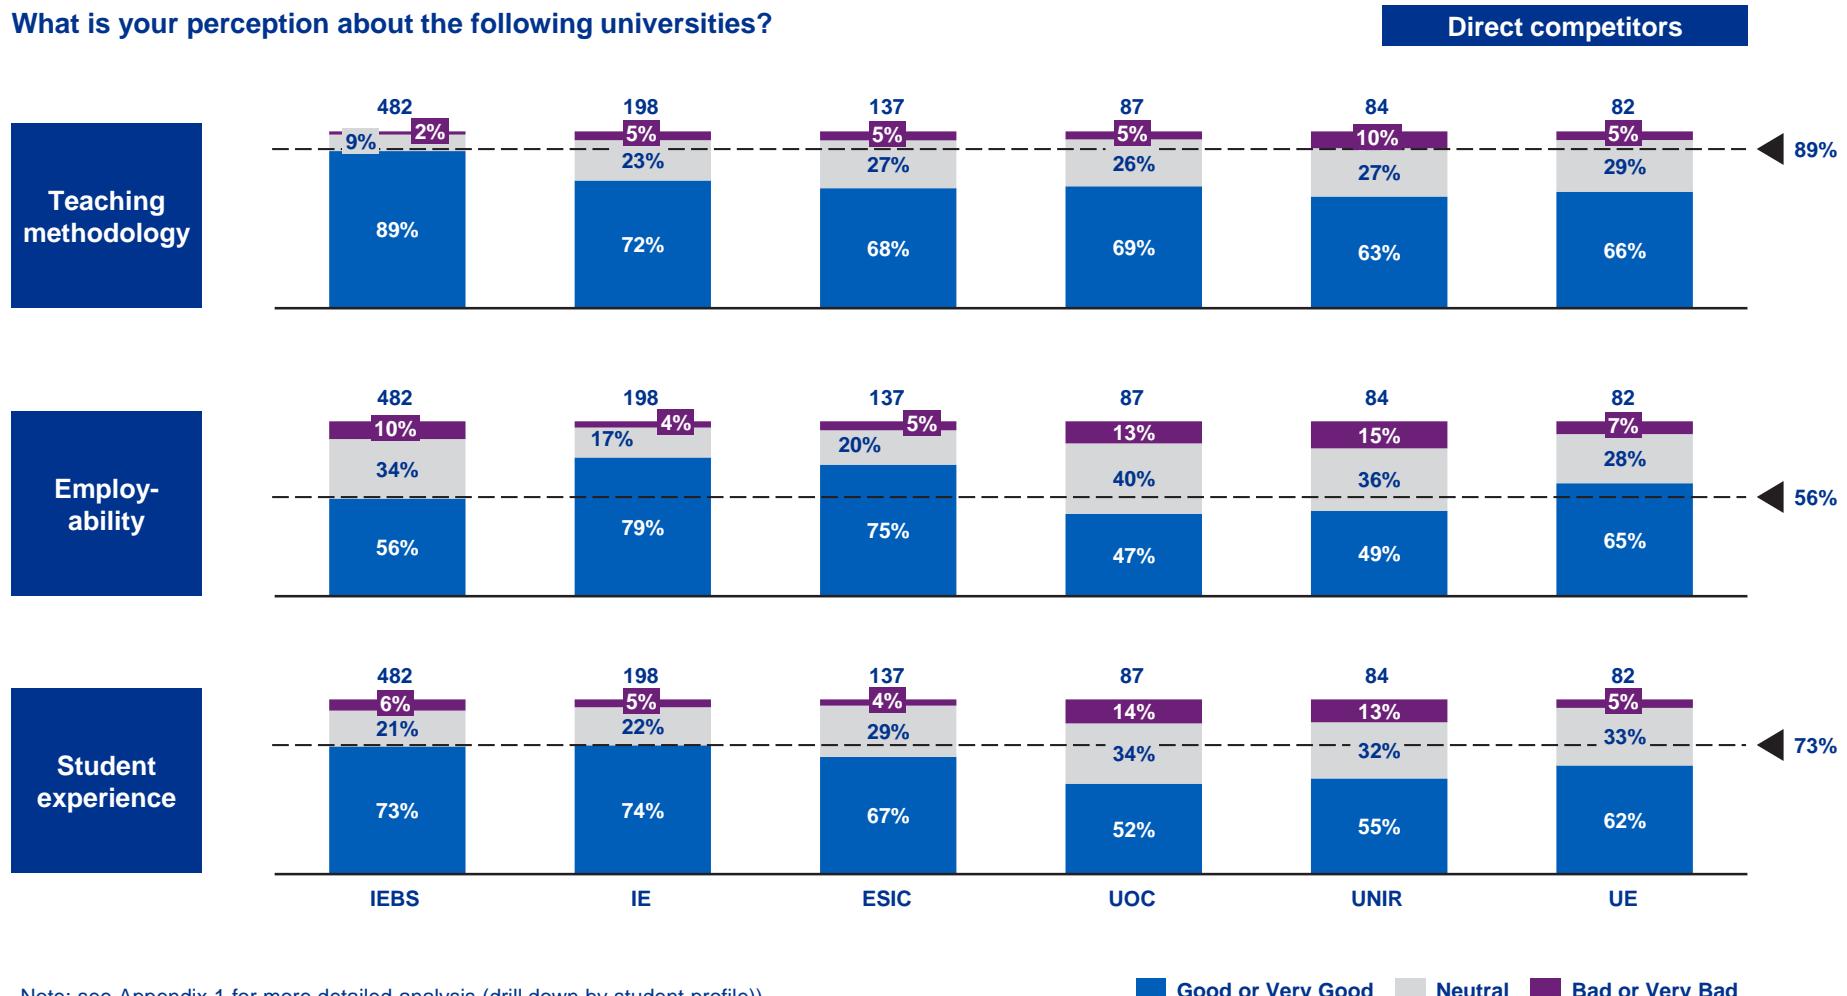

Note: see Appendix 1 for more detailed analysis (drill down by student profile))

KPCs and IEBS performance

... and teaching methodology. As expected pure online players (UOC, UNIR, IEBS) perform worse in employability, but IEBS holds up for student experience

What is your perception about the following universities?

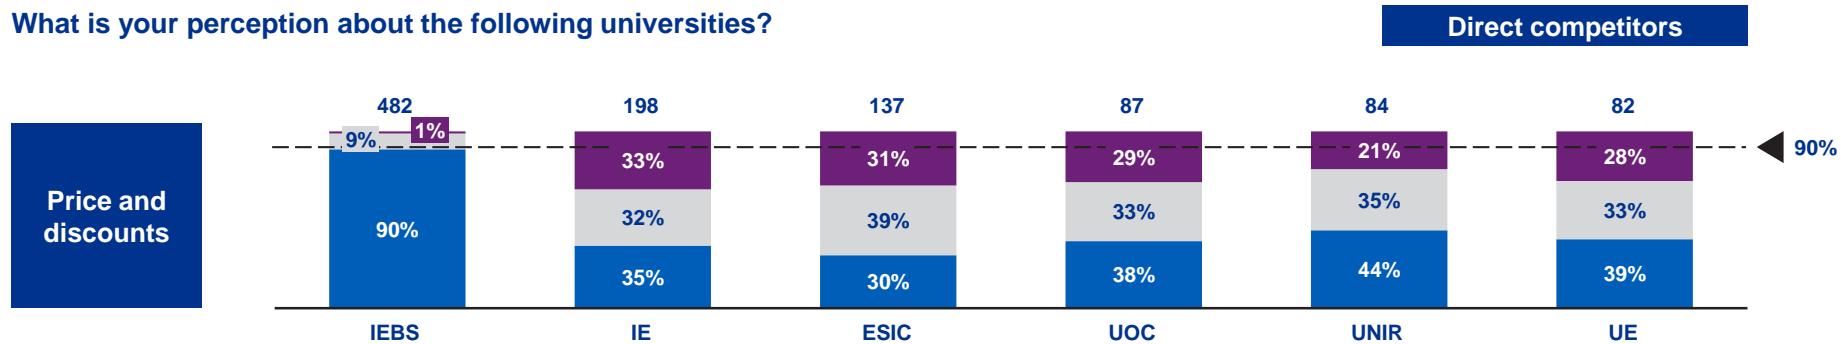

Note: see Appendix 1 for more detailed analysis (drill down by student profile))

■ Good or Very Good ■ Neutral ■ Bad or Very Bad

KPCs and IEBS performance

IEBS is perceived as the leading university in terms of prices and discounts, which coincide with one of the most relevant factors when choosing an online program.

What is your perception about the following universities?

Note: see Appendix 1 for more detailed analysis (drill down by student profile)

■ Good or Very Good ■ Neutral ■ Bad or Very Bad

NPS

IEBS has a NPS of 49%, which is quite high for the higher education market, this scores is even higher among Latin American students (66%)

NPS

- IEBS has an NPS of 49%, which is quite high compared to comparable universities / educational institutions, e.g.: Tech Aula (online) – 19%¹, CEG (onsite) – 40%¹; CEU Cardenal Herrera (onsite) – 29%²; CEU San Pablo – 13%²
- Additionally, focusing on detractors of the university (those who rank the probability of recommending it from 0 to 6), a high percentage of them are concentrated in grades 5 and 6 (53%). Almost half of the detractors are more inclined towards recommending IEBS than towards not recommending it
- This high level of satisfaction is in line with the relevant percentage of students (12%) who first knew about IEBS through referrals from friends or family
- Based on previous experiences, it has been noticed that the NPS is highly dependent on the attachment to the brand and the engagement with the course provider, and IEBS seems to perform specially well. Based on students comments, IEBS, thanks to its innovative teaching methodology, is able to bridge the gap between online and onsite education, making easier for students to feel part of the institution
- As for the reasons to recommend IEBS, the following stand out: the 100% online methodology (students greatly appreciate that they can carry out their homework at any time and place, thus being able to make their studies compatible with their working life), the relevant educational content and the professors quality (what seems to be a very distinguishing factor for IEBS compared to other online institutions, based on students comments)
- On the other hand, the main reasons for not recommending IEBS are: insufficient educational content, very general on some occasions, and the course methodology, as they feel sometimes very tied to the course schedule, losing some of the advantages of the online methodology (e.g. some masterclasses are scheduled at a specific time but, as there are students from Europe and America, some of them are not able to attend them because of the time difference)
- Analyzing the differences of NPS by the segmentations carried out throughout the document, it is perceived: Latin American students have an NPS of 66% while Spanish ones 39%, which is aligned with some of the qualitative comments provided by them claiming that IEBS gives them the possibility to study a business-related program, as they do not have this kind of institutions in their region
- By field of study and type of program, the NPS of Business & Tech courses (53%) and master's programs (54%) stand out as the top performer, contrasting with Marketing courses (42%) and postgraduate programs (45%). Overall, longer Business & Tech – related programs have the higher NPS, which is consistent with the objectives achievement

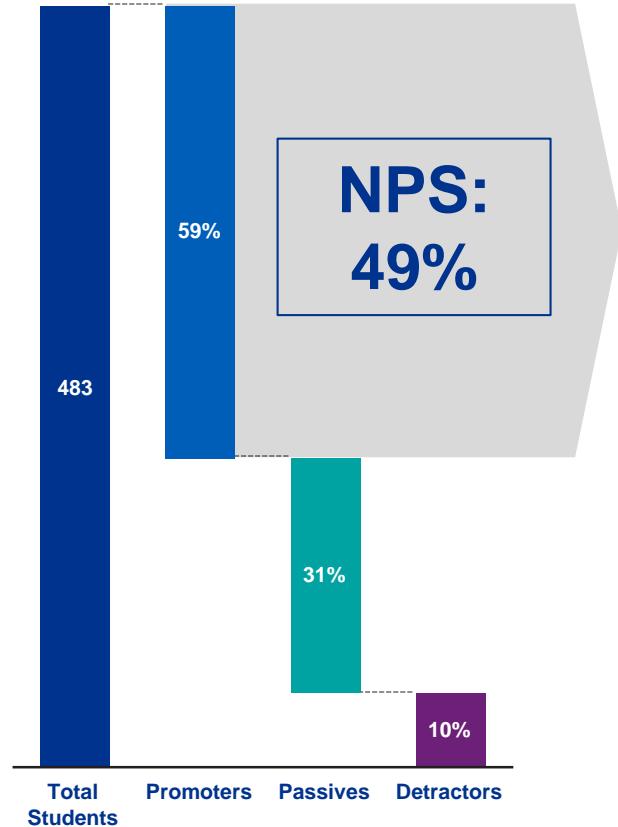

1) KPMG analysis

2) Bain analysis provided by UE

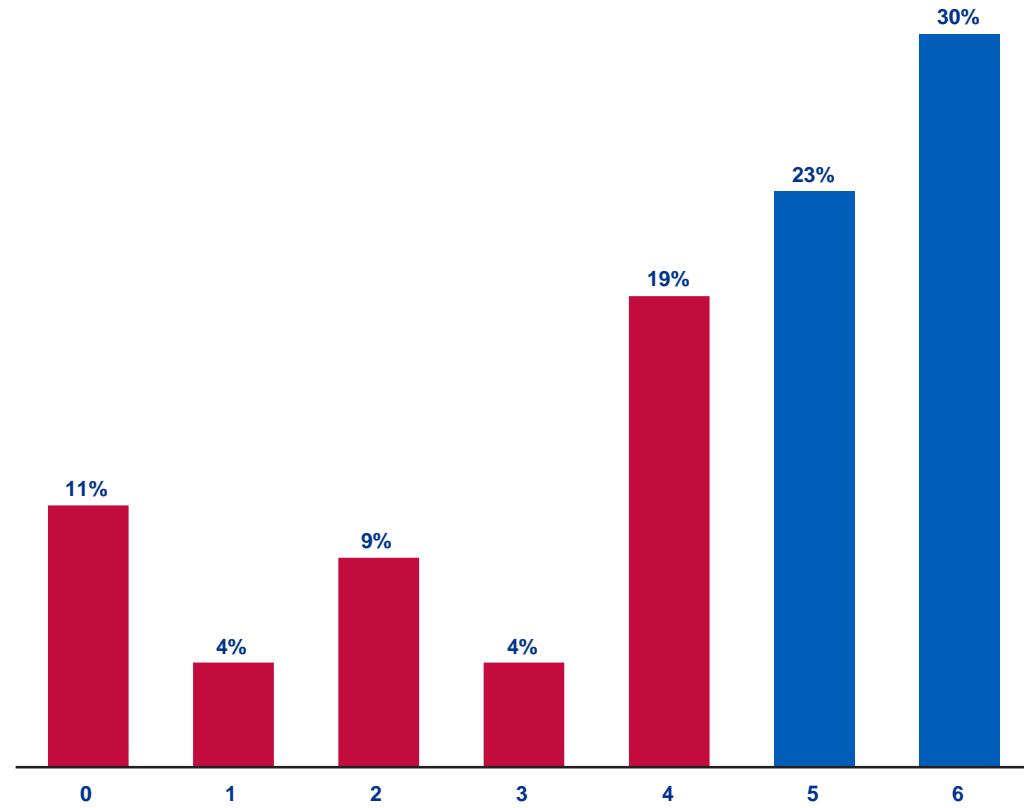

NPS

IEBS has a NPS of 46%, very high, with c.50% of detractors ranking 5-6, leaving a few number of students who are more prone not to recommend that to recommend

How likely would you recommend IEBS to a friend?

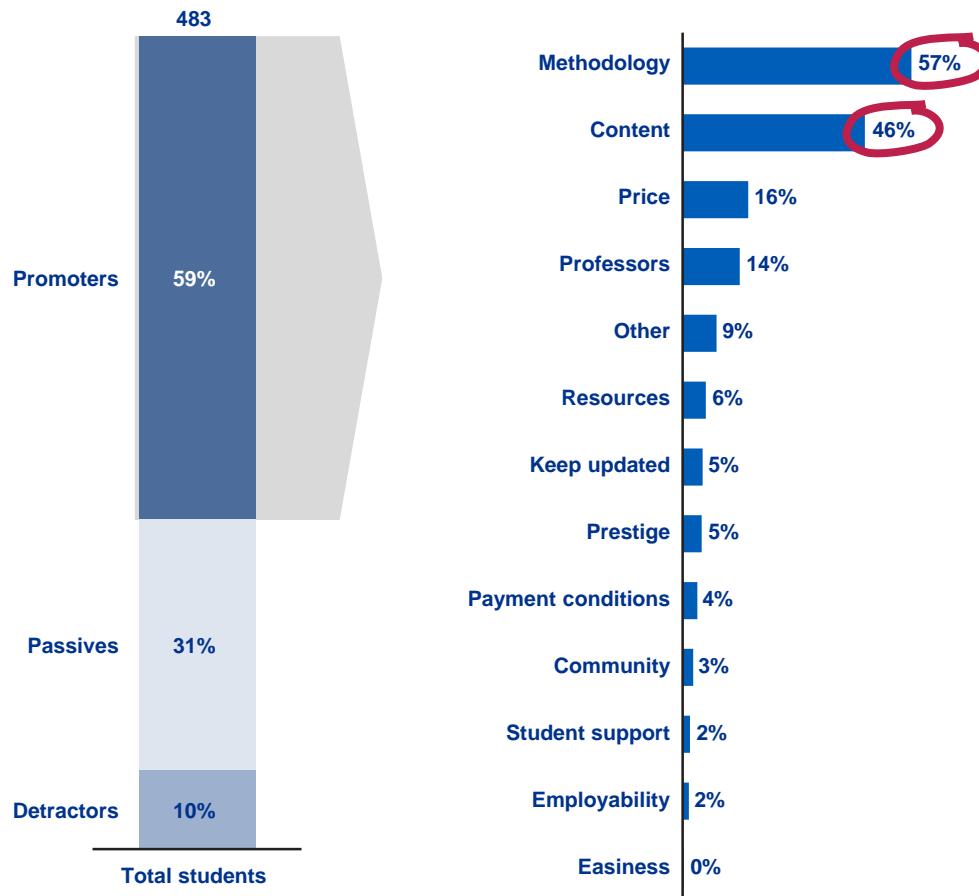

Distribution of detractors by score

Among reasons to recommend IEBS, online methodology and innovative content seem to be the most relevant ones

Why would you recommend your course at this university?

Key highlights from comments

In line with the responses throughout the document, students highly value the flexibility provided by the 100% online methodology so that they can study and work simultaneously.

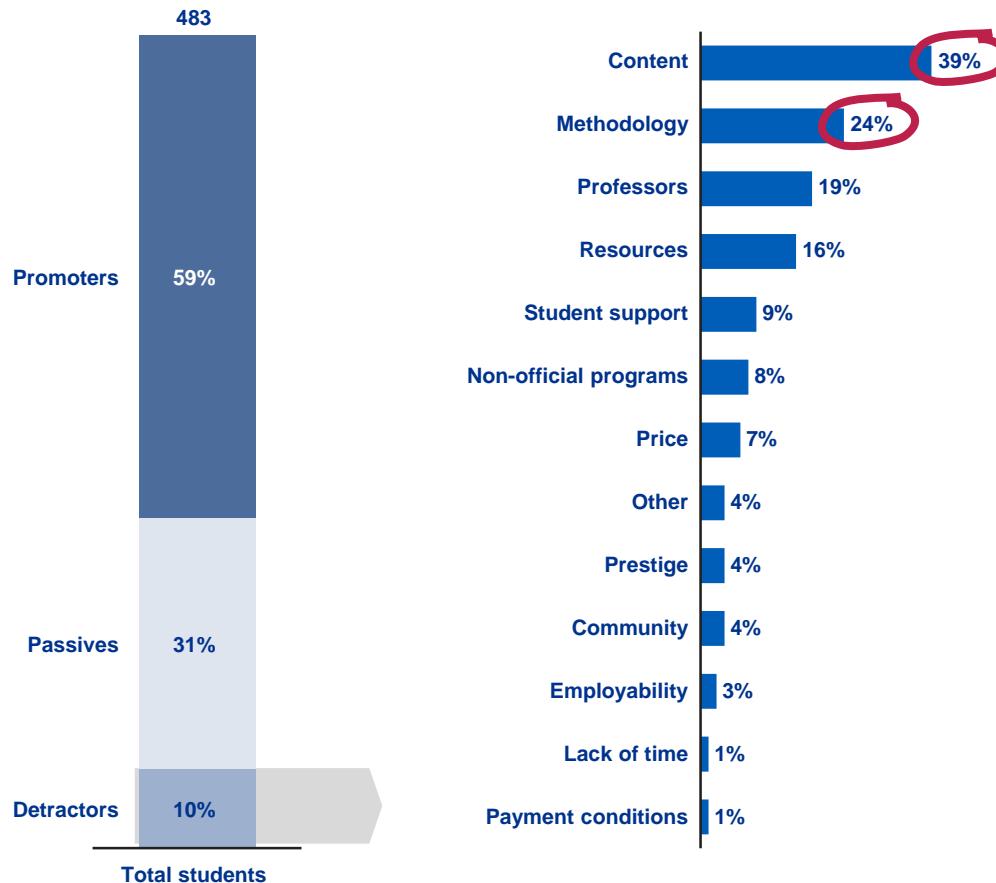

Regarding the teaching content, students specially highlight the innovation component that they found in IEBS courses.

Satisfaction in terms of price, discounts and payment conditions is very high and one of the most frequent reasons to recommend IEBS courses.

It becomes specially relevant the importance that students give to professors quality, as they seem to be true experts in their fields.

On the contrary, content might seem too easy for experienced students and classes rigid schedule makes students unable to attend them

Why wouldn't you recommend your course at this university?

Key highlights from comments

Teaching content seem to be good enough for students facing “first contact” with a specific topic, but not for those more experienced, becoming too simple.

Some students highlight that they felt very tied to the course schedule, losing some of the advantages of the online methodology

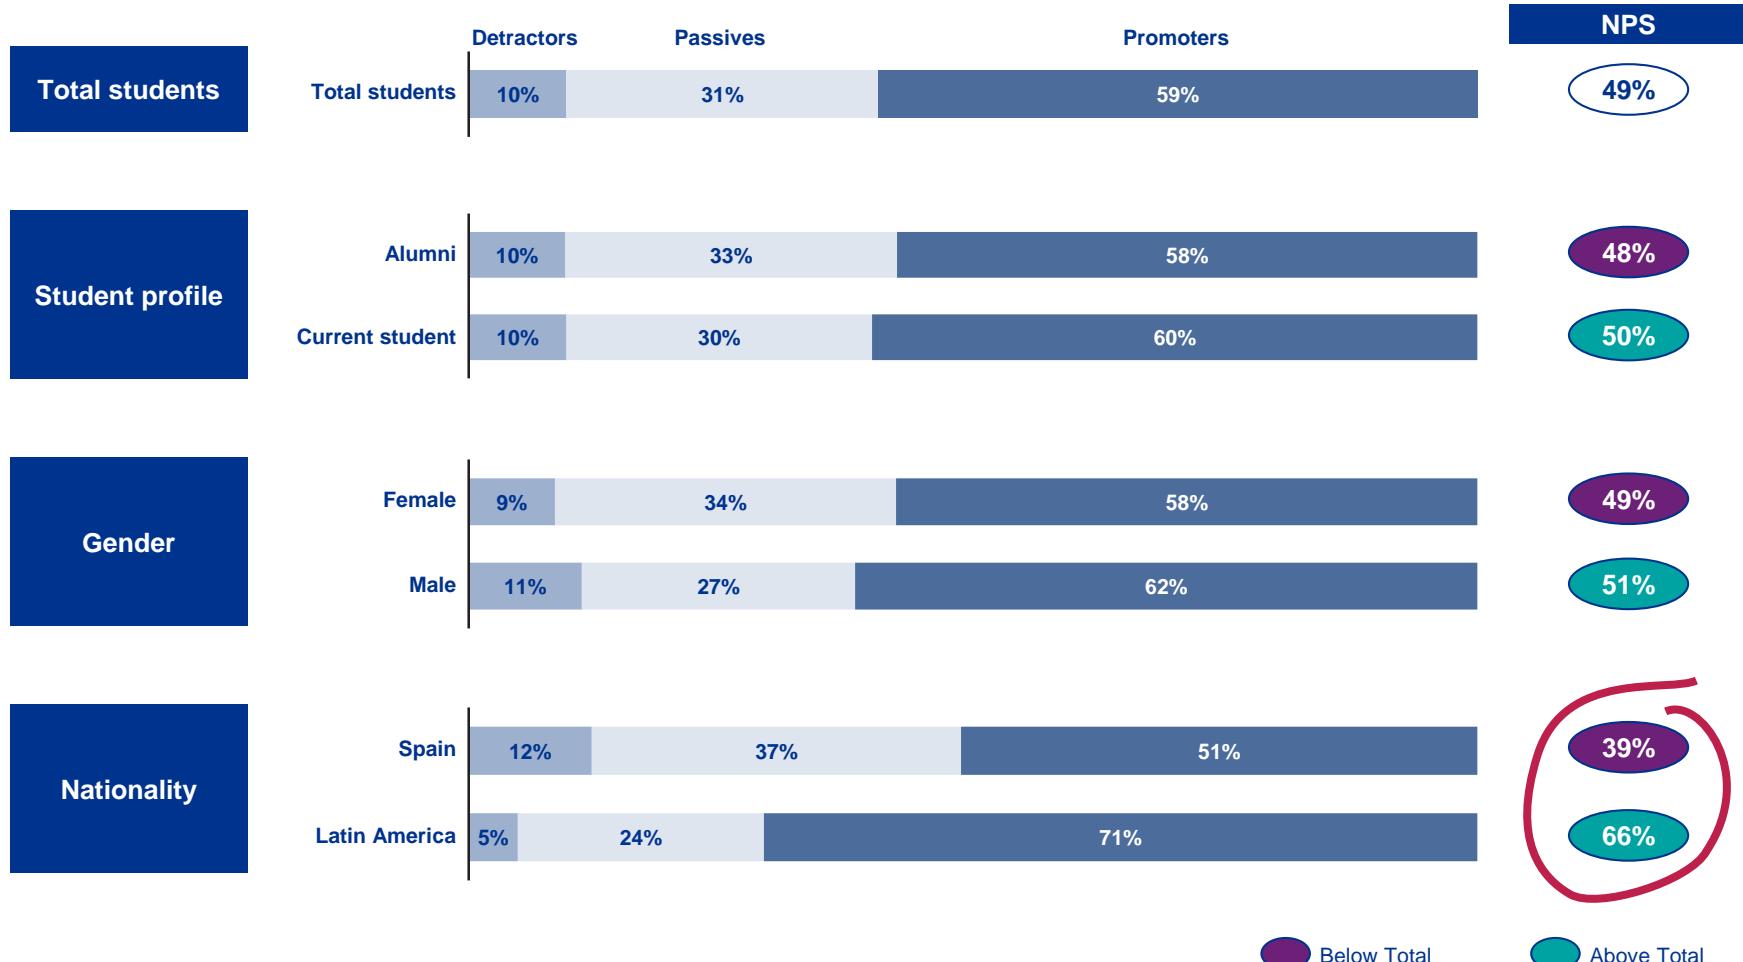

There seems to be a low level of standardization, some students claim that quality of contents and professors is quite different even within the same course

Some students complain about the non-official nature of the courses, claiming they were said it was official but at the end it was not.

NPS

By nationality, Latin American students have a NPS of 66% against 39% of Spanish ones, mainly due to the low competition of business schools in that region...

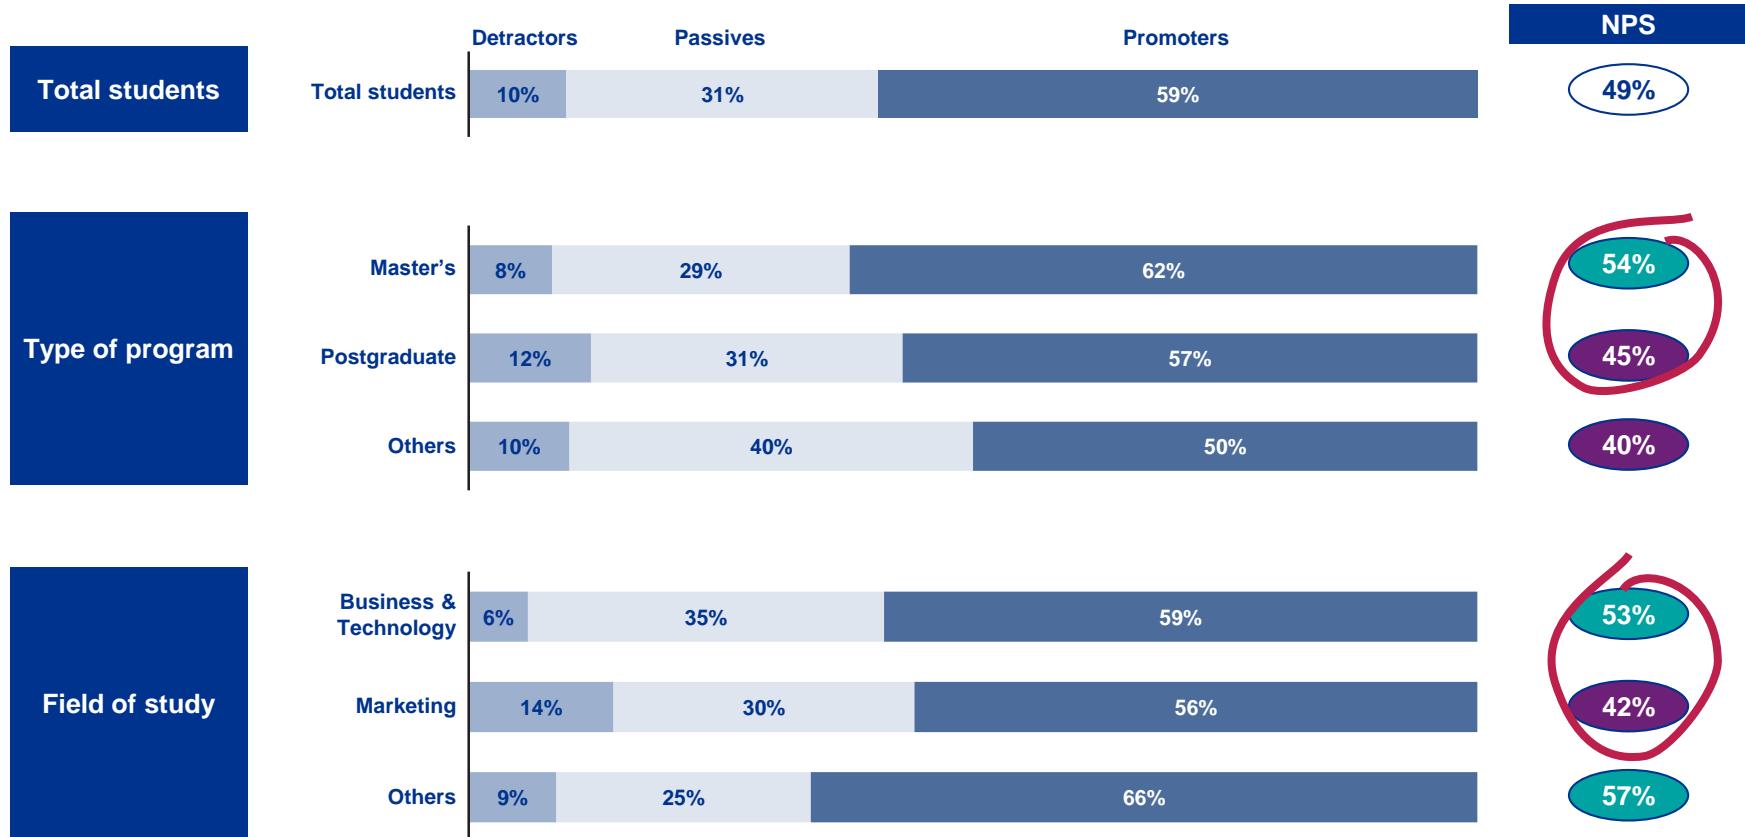

How likely would you recommend the online course you took to a friend?

NPS

... and by type of program and field of study, Master's (54%) and Business & Technology (53%) are the clear winners against Postgraduates (45%) and Marketing (42%)

How likely would you recommend the online course you took to a friend?

Below Total

Above Total

Pricing

Pricing

IEBS is well considered in terms of value for money as they provide innovative content at an apparently low price, being most of students willing to pay more for it...

Value for money

- IEBS is very well perceived in terms of value for money by their students:
 - About 56% value it as good or very good
 - On the contrary, only 4% consider them as bad or very bad
 - The other 40% of student consider they received what they paid for
- The reasoning behind this good perception might be, based on the qualitative comments provided by the students, that IEBS goes beyond online education as they apparently offer innovative content with a methodology that bridge the gap between online and onsite education
- Consequently, when asked about the additional services that would improve the value for money perception, only better employability / salary prospects clearly outstands

Tuition

- IEBS courses range between 0.5k€ and 10k€. They are distributed as follows:
 - C.50% of IEBS courses cost less than 2,5k€, depending on the type.
 - C.40% are ranged between 2.5K€ and 5k€
 - The minor proportion left (c.10%) is for courses over 5k€
- The high satisfaction of the students with the prices of the IEBS courses (90% of students consider IEBS performance in terms of pricing conditions as above the average) translates into their willingness to pay more for them.
 - 63% of IEBS students would be willing to pay more money for their tuition.
 - Of those courses under 5k€, c.65% would be willing to pay more (from extra 10% to 50%) and c.30% would pay extra 50%, what highlights IEBS has room for increasing their programs tuition

... what should be perceived as an opportunity to increase their price positioning and discounts/scholarships policies

Tuition (cont.)

- Making a deeper analysis per student segment, there are some relevant differences regarding this willingness:
 - Alumni (67%) are more willing than current students (58%) to pay extra money for their tuition, what might be due to the fact that, with perspective, they appreciate more the value provided by the course
 - Student from Latin America are less willing than Spanish ones to pay extra money for their tuition, what is surely because of the salary gap between both regions
- In line with what was mentioned before, the additional service students would be specially willing to pay extra money for, is a better employability after completing the course. This is highly aligned with how IEBS was ranked by the students compared to other comparable universities. IEBS was placed on top of the list for most of the factors (content, methodology, etc.) but not regarding employability, where they were ranked below Tier 1 competitors and some of the Tier 2 ones. With no doubt, this is one of the aspects where there is relevant room for improvement for IEBS
- This generalized willingness to pay more for the tuition should be seen as an opportunity for IEBS to adjust their pricing policy, increasing slightly the average tuition to the benchmark average and adjusting fees per region

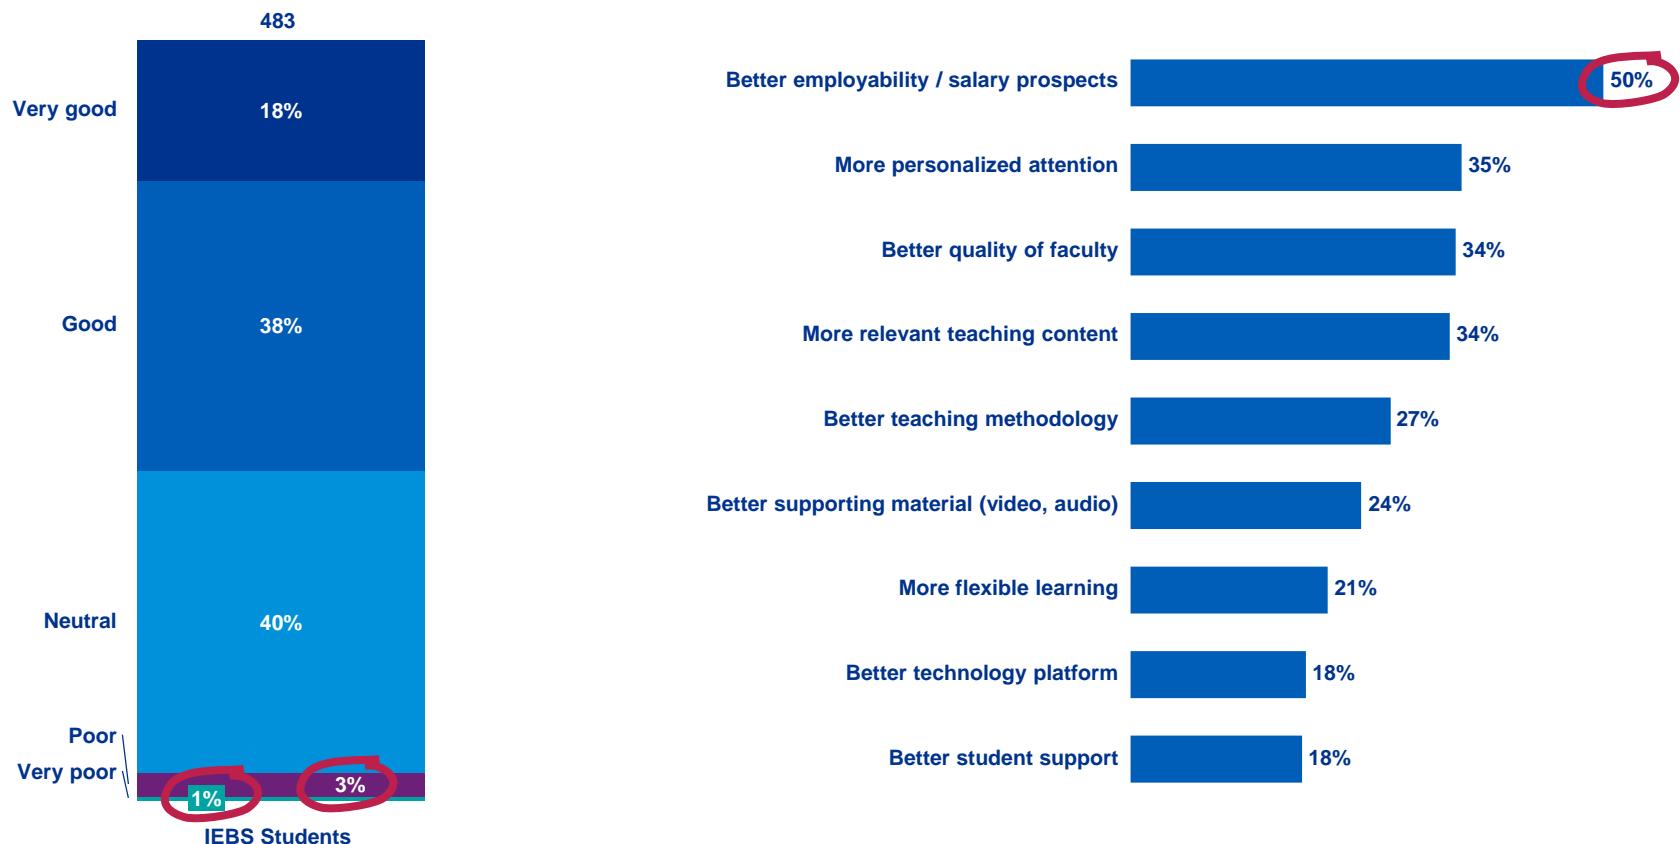

Discounts and Scholarships

- The good perception of IEBS regarding the price seems to be a consequence of the high volume of discounts and scholarships they grant
- Out of total, 38% of the students have received a discount and 53% a scholarship
 - The level of satisfaction of those students who have been granted with a discount is very high, being over 63% satisfied and 31% highly satisfied
 - As to students with scholarship, the same pattern is identified: 36% satisfied and 57% highly satisfied
- Once again, the large number of discounts and scholarships granted and the high satisfaction of students with them, should be seen by IEBS as an opportunity to improve their price positioning

Pricing

IEBS perception in terms of value for money is very good (4% perceive them as poor or very poor), being employability the most important factor that could improve it

How do you perceive IEBS in terms of value for money? What services would improve your value for money perception?

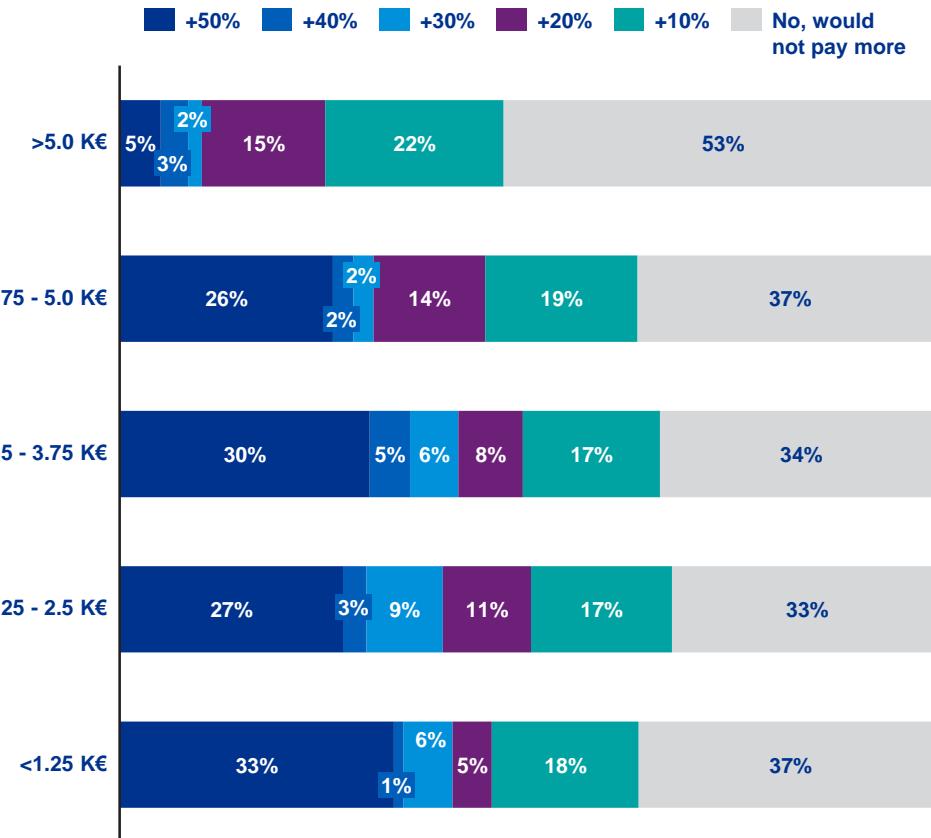

Pricing

Most of the courses (70%) are priced between 0.5 - 3.75k€, what seems to be low as 63% of IEBS students would be willing to pay more for their tuition...

How much have you paid for your tuition at IEBS?

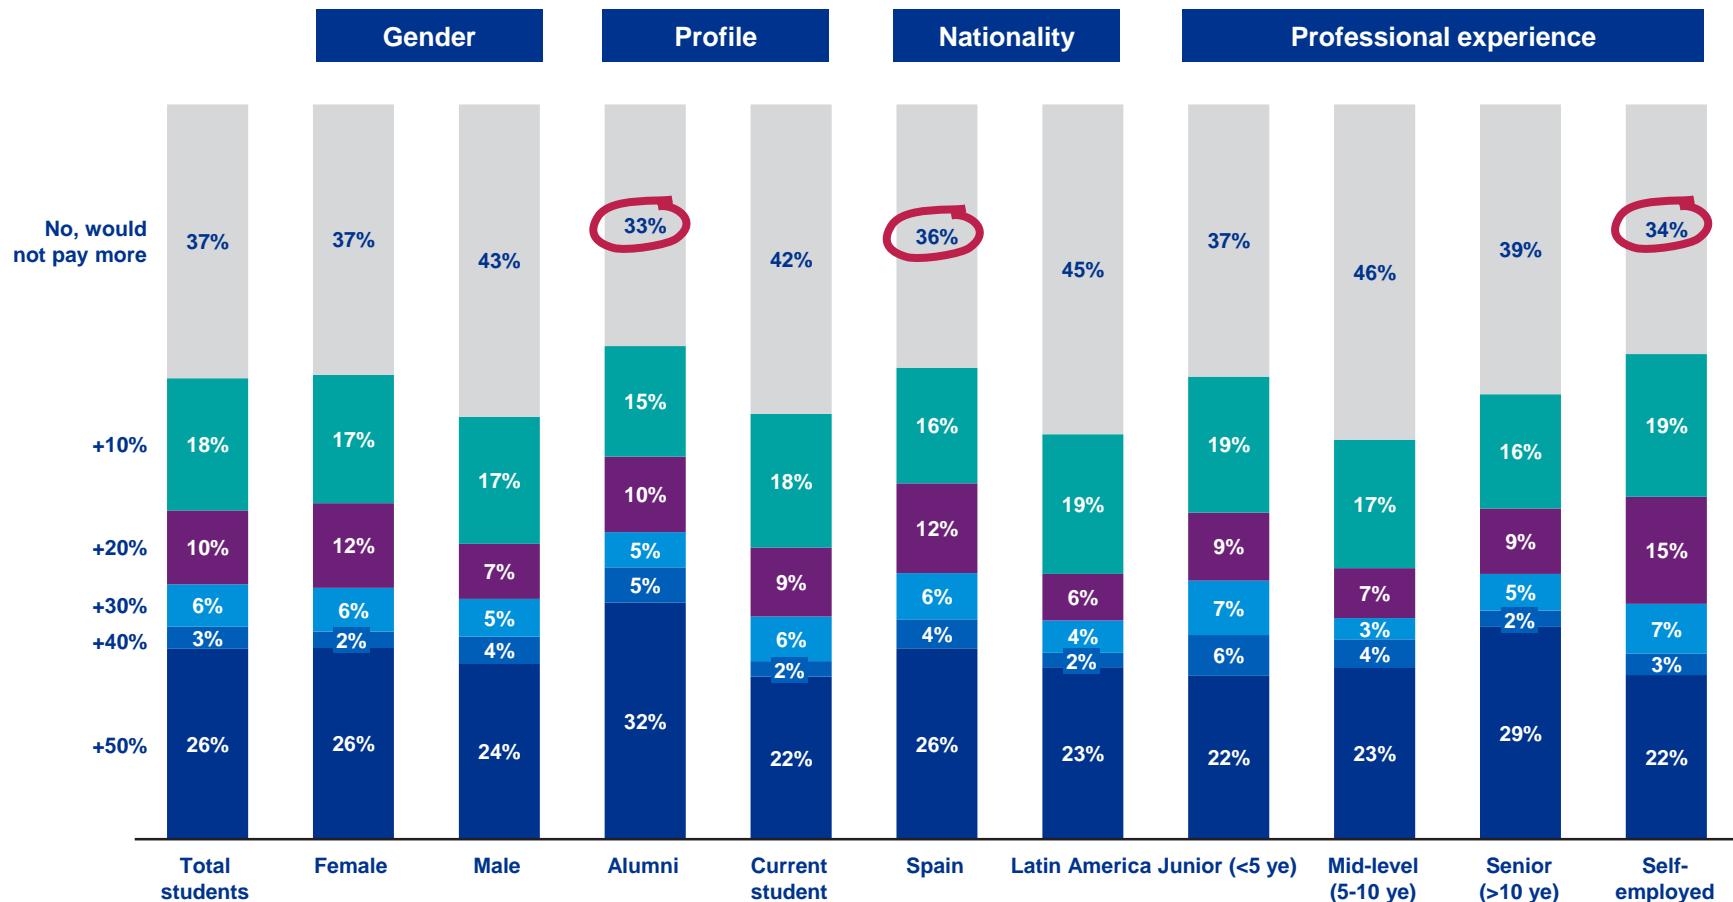

Would you be willing to pay extra money for your tuition?

Pricing

... specially Alumni, students from Spain and those who are self-employed...

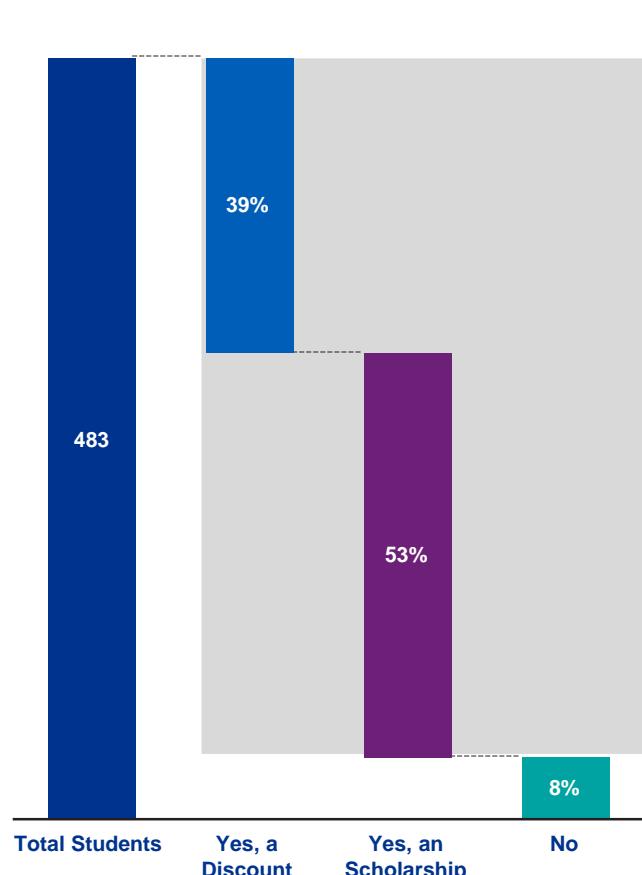

Would you be willing to pay extra money for your tuition?

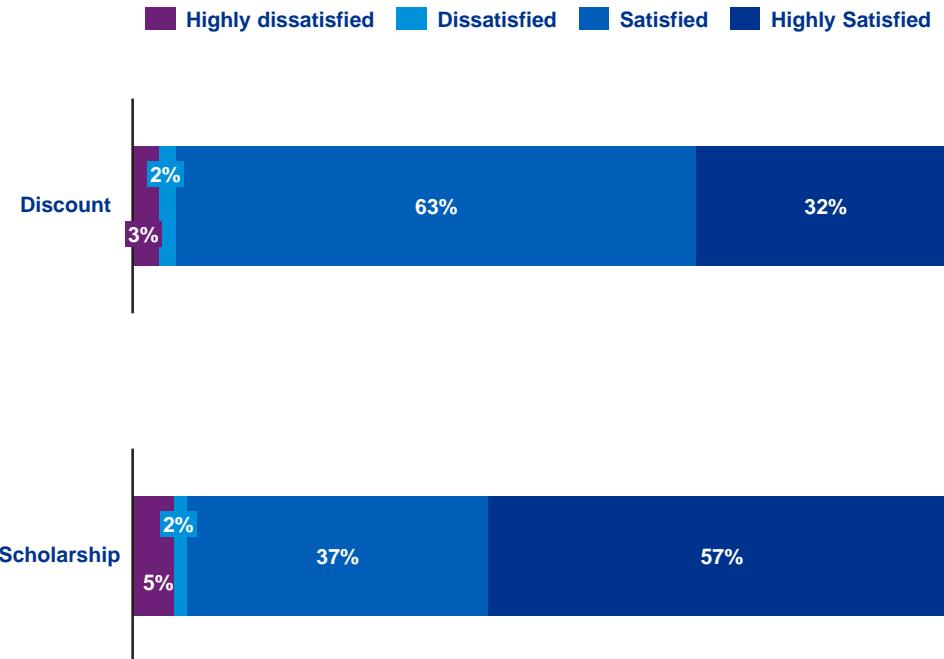

Pricing

... which is surely due to the large number of discounts (39%) and scholarships (53%) granted, being students very satisfied with them

Have you received any discount or scholarship?

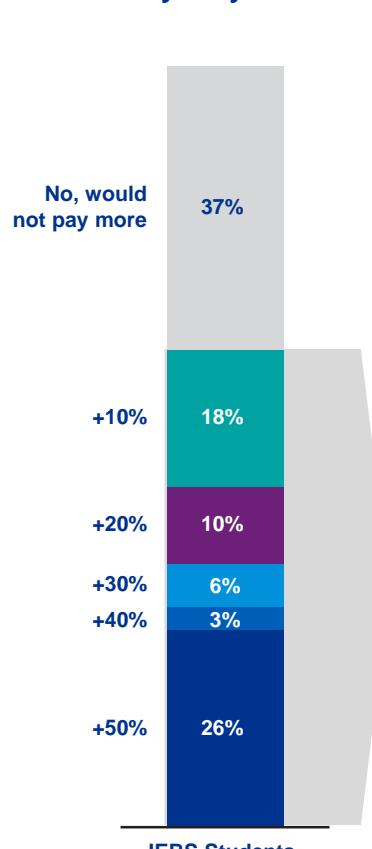

How satisfied are you with your Discount or Scholarship?

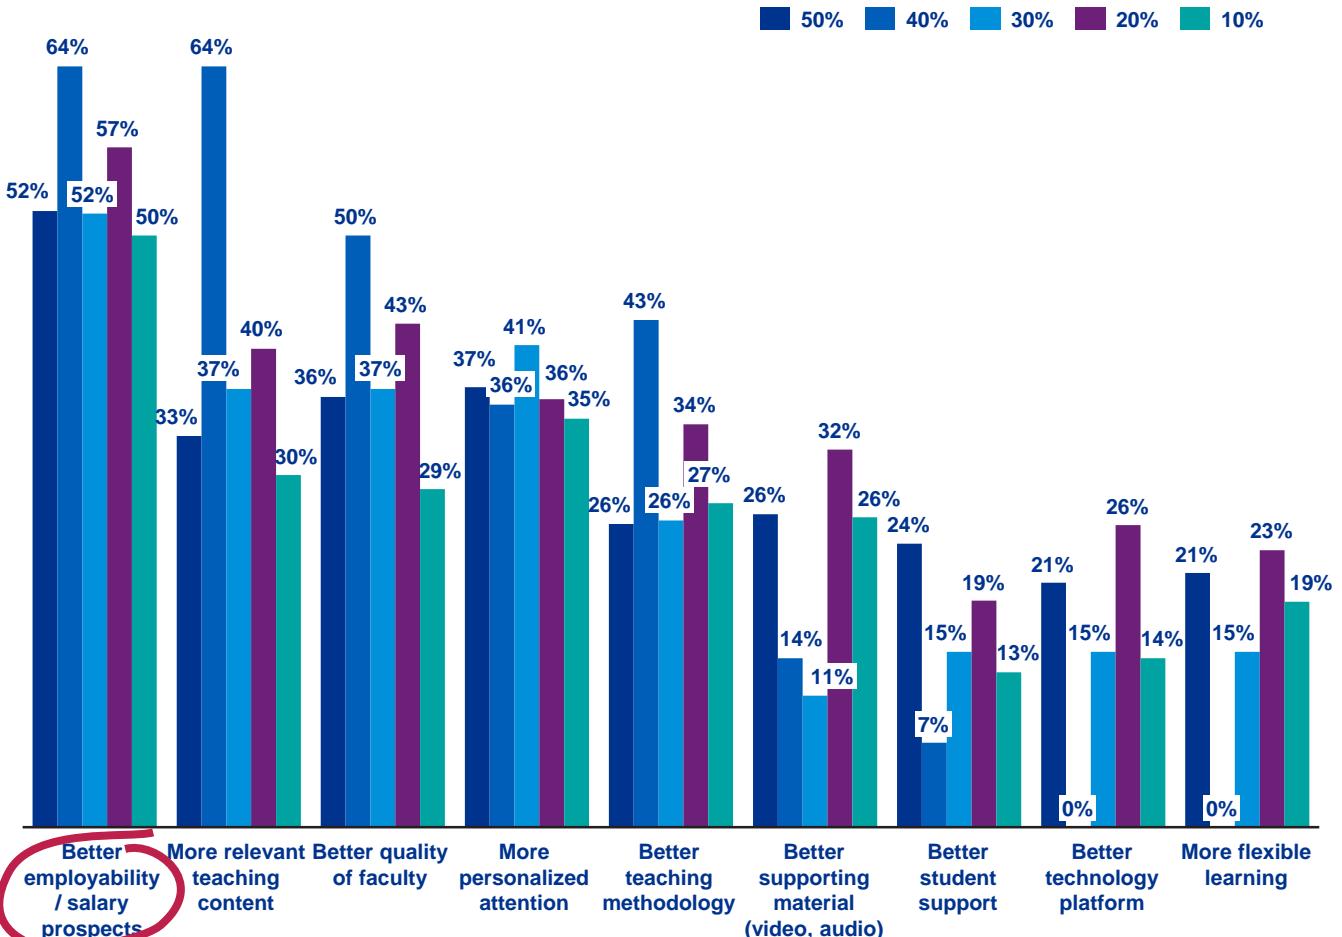

Pricing

IEBS has room for improvement in terms of employability levels, as it is the most recurrent factor that would make students pay more for their tuition

Would you be willing to pay extra money for your tuition?

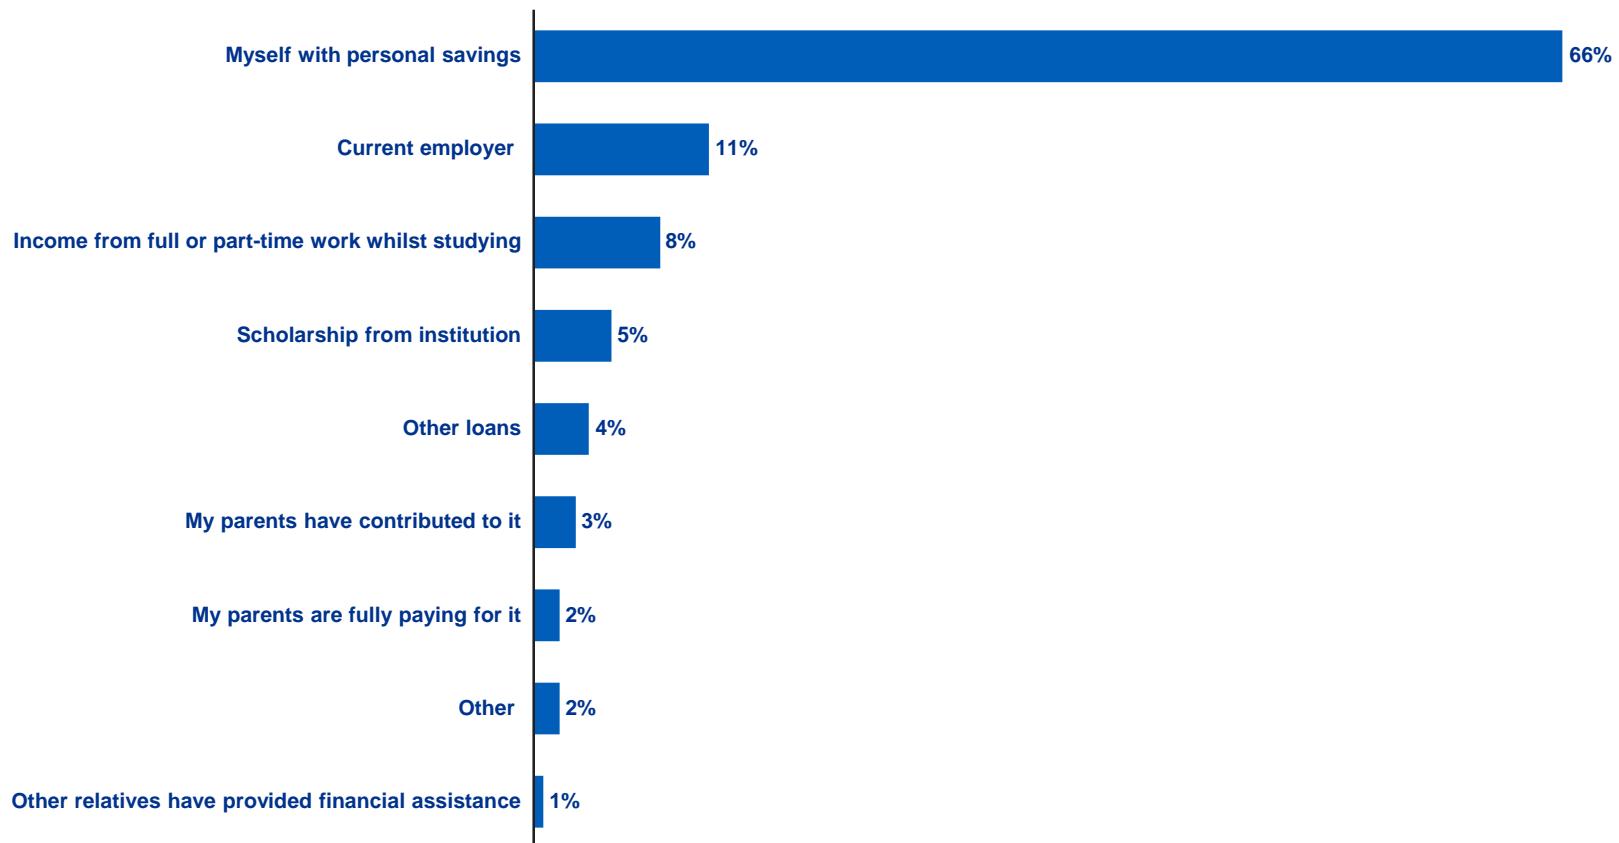

Would you be willing to pay more if the following additional services were offered?

Pricing

As expected, since most students combine their course with their job, they are largely paying themselves or alternatively financed by the current employer

Who pays for your tuition?

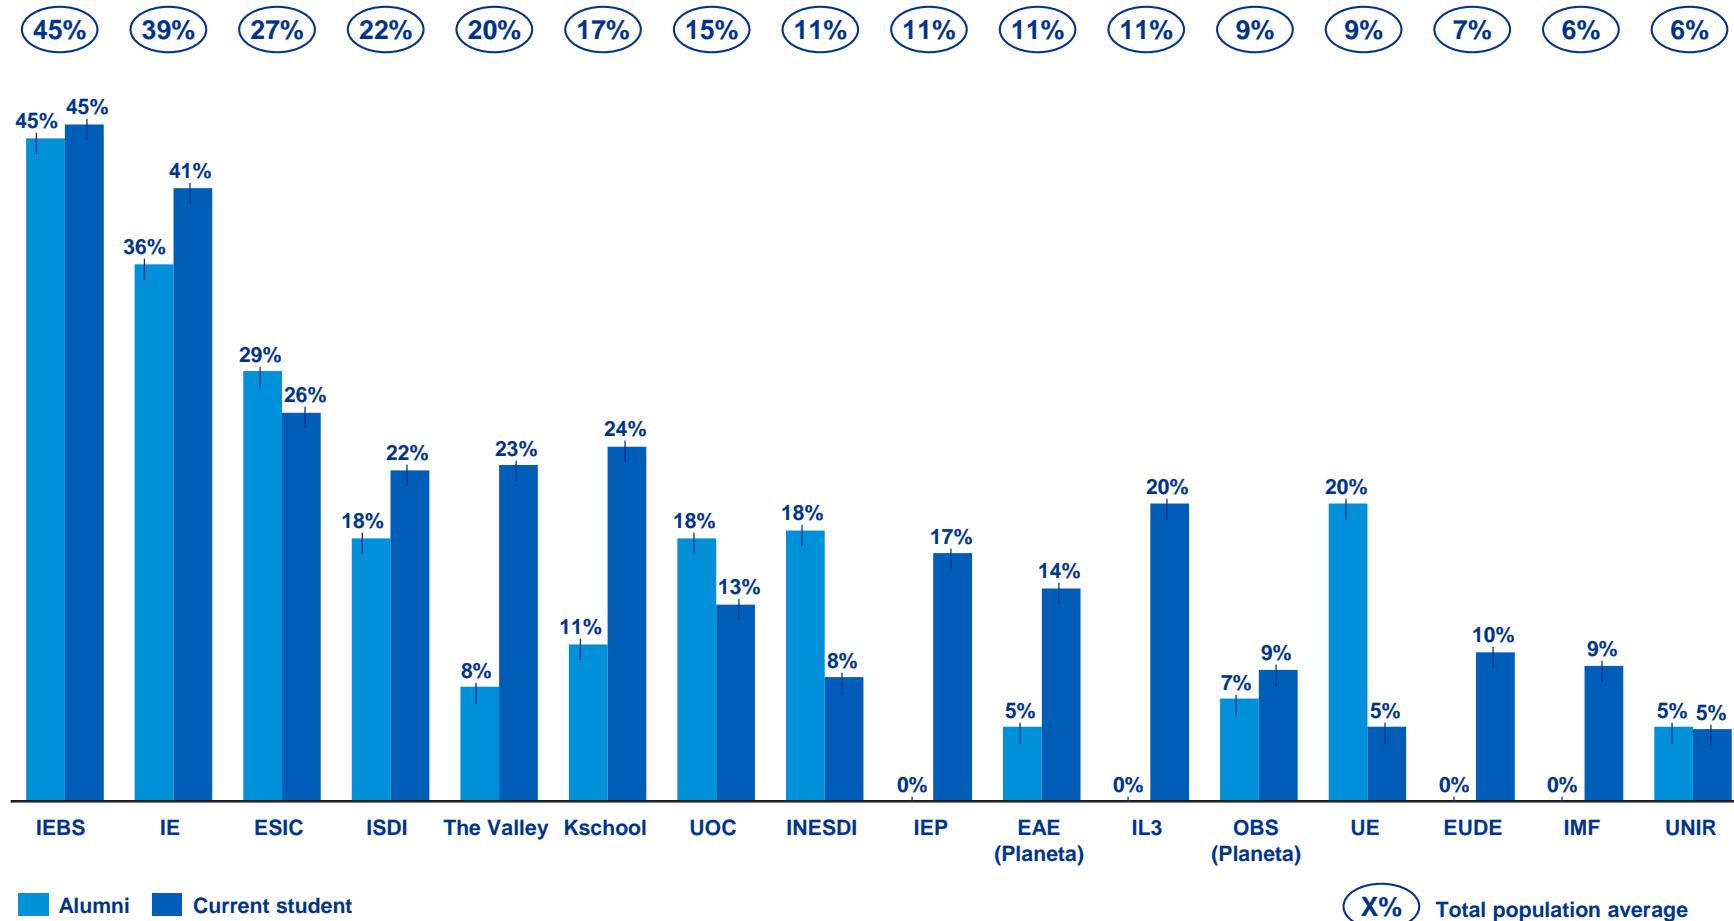

Appendix 1

Which are the 3 areas of your course at IEBS that you like least? (1/5)

Which are the 3 areas of your course at IEBS that you like least?			
rrhh	no tener clases en directo	creatividad digital	solución de problemas
analitica	e commerce	lenguaje html	accesibilidad
temporalizacion	analytics	conceptual	es como un curso por correspondencia
twitter	calidad de las diapositivas	la falta de una comunicación más cercana	me resulta muy complejo guardar los videos
linkedin	contenidos	marketing	no disponer de herramientas de prueba
lean	finanzas	muy poco material escrito	disrupción
contenido en muchos casos copiado	algunos trabajos eran demasiado densos	sem	fin de semana no se contesten mensajes
growth hacking	casos prácticos	herramientas 2.0	kw research
relación laboral_intermediacion	uso del catalán en ejemplos	mejor retroalimentación por parte del tutor	fuentes de financiación tradicionales
estrategia digital	recursos insuficientes	muchá materia superficial sin profundizar	inf pendiente
redes profesionales	volumen de trabajo	test	tiempo
contratos	metodología de enseñanza /vídeos	calidad de diplomas en versión digital	logistica
las master classes	informática	temas demasiado básicos en principio	ranking de clasificación
insights - creatividad (psicología)	blog	gestión de proyectos	introducción al growth
trabajos grupales	me gustaron todas	internalización	big data
legal	poca comunicación con los profes	contabilidad	gestión por competencias
finanzas	algun profesor tardaba en contestar	seo	que cambiarían agenda de masterclass
guion no lineal	seo	sem	costos dependen del dolar
más proactividad por el tutor	módulo financiero	cálculo roi	redes sociales
poca profundidad de los temas	hr	playful	tanto módulo de google analytics
lecturas de temarios cuando son amplios	la plataforma que es muy amplia	manejo de marca	marketing pull
diferencia horaria	carga de trabajo	black seo	videos
poca seriedad en modos grupales	algunos profesores	estudios	coberseguridat
tendencias de selección	tecnología	tfm	esto hace parte del estudiante
dirección comercial	algun profesor	trading	marketing pull
finanzas	introducción	remarketing	deberían organizarse en ser 2 temas
seo	sem opinião	financiacion	seo
seo	procesos etl	ciertas videoclass	proyectos muy laboriosos
técnicas seo	marketing	trabajo final	no pude asistir a ninguna masterclass
seo	canales de venta y distribucion	el contenido excesivamente largo.	enunciados de los trabajos prácticos
accesibilidad	foros	accesibilidad tutor/profesores	algún tema bancario
conflictos	teoria de las limitaciones	email marketing	inbound
la parte más informatica	estratégia digital	aplicaciones a otras áreas (externa)	pedagogia
marketing	projeto final	comercial	canales de venta
display	profesorado	contabilidad	linkbuilding
cueros impartidos por carlos fernandez	relación con empresas	sem	historias
optimización de la conversión avanzado	aun no he recibido el titulo!!!!!!!!!!!!!!	finanzas	falta de algunos expertos
redes sociales	lean startup	prototipado (ricahard)	finanzas y contabilidad

Appendix

Which are the 3 areas of your course at IEBS that you like least? (2/5)

el tono de las respuestas hacia los alumnos	kw research	scrum	blockchain
analitica web	rrhh	largo y	la parte legal no puede con ella
lo que es más teórico, historia de, etc...	costos	estructura de plataforma en cuanto a sistema	a veces debiera disponerse de más tiempo
plataforma.	análisis bursatil	estrategia y planificación	transformación
user experience	algotrading	parecio	seo para e-commerce
prototipado y playtest	analitica	estandar	industria 4.0
finanzas	el tiempo destinado al tf	las fechas tan marcadas para los casos	diseño participativo
finanzas	finanzas	algún contenido desfasado	legal
seo	dashboard	falta de tiempo cara a cara con profesores	diseño centrado en el usuario
finanzas	hacer las practicas en grupo	todas fueron útiles	falta mas debate entre los alumnos
narrativa (por los profes)	redes sociales	e-commerce	aspectos legales
google analytics	marketing	link building	prestashop
demasiado	plataforma un poco tiesa	atención al estudiante	análisis externo
programacion	contenido desactualizado	recuerdo	rh
selección	sem	demasiado orientado a emprendedores	videos sin texto
analitica	fechas	faltó profundizar más en informes	no había clases, estaban en un pdf.
cambiar los miembros de los equipos	introducción al campus	demasiado tiempo de estudio	e commerce
trabajo grupal	publicidad	gestión presupuestaria	sem
alumnos inactivos	xp	networking	no cubre tecnologías como hyperledger
todas fueron útiles	mas profundidad en algunos aspectos	no disponer de mayores recursos didácticos	amp
kpi	big data	no poder hacer mi caso real	poca conversación entre compañeros
seo de contenidos	seo para ecommerce	estructura de salarios y reconocimiento	exámenes
profesores	calidad de algunos profesores	seo	material muy extenso
finazas	narrativa (escaso)	internacionalización	profesores que no explican suficiente
faltó gtm	introducción al big data	finanzas	informática
aplicaciones en empresas al final	demasiado texto en la documentación	test	foros de debate
plataforma online un poco anticuada	idioma - única opción es español	marketing mix iii	me gustaron todas
corporate finance	logística	calificar a los compañeros	seo
debates que no se debatían	diseño participativo	dificultad muy básica	módulo financiero
se repetían algunos contenidos	plataforma no muy user friendly	distribución	hacer trabajo en equipo al ser de otro país
empresa y org 2.0	expansión internacional	material didáctico no actualizado	los videos
poco apoyo del tutor	erp	idem	algun compañero del trabajo
falta de conexión en los casos	formulas de conversion	algunos contenidos no muy profundos	introducción
los proyectos de los últimos módulos	game design i	no unificación de formatos	sem opinião
backlinks building	el campus	algun profesor con poca experiencia	marketing
analisis financiero	el volumen de trabajo	el retraso de los profesores en responder	organización comercial
analitica	los horarios de las clases en vivo	extensa encuesta	videoconferencia
marketing	conocimientos web	lean change	gestión de almacenes
contabilidad	clases magistrales	curso introductorio herramientas 2.0	reputação

Which additional programs should IEBS offer? (2/2)

Programas sobre protocolo, relaciones int.	INbound marketing	comunicación institucional.	Seguridad Comercio Exterior
Intensivos presenciales	Coaching para empresas / emprendedores	Mba	Emprendimiento
Desarrollo web	Transformación Digital	youtube instagramer influencer	domotica, seguridad de datos, matematicas
Twitch	Más práctica con proyectos personales.	Prácticas en empresas durante el curso.	UI / UX AR/ VR
CÓMO ESCRIBIR UN LIBRO	Mba executive	gestión de proyectos	Presentar o vender un proyecto, idea
Una especialización en Marketing Digital	Neuromarketing Negociación	emprendedores no digitales	Data analítica
Inteligencia Artificial	aplicaciones para móviles	Programas de coaching	Programación informática.
TRIBUTACION EMPRESARIAL	Maestrias en Administracion de Empresas.	CONTENT MARKETING	Programación blockchain
MBA	crowdfunding o blockchain	Copywriting	Idiomas.
Más sobre negocios, dirección, etc	Certificaciones.	tecnología y el desarrollo	manager de ingeniería o CTO de compañía.
Otros	tecnologicos actualizados	Ingeniería	gerencia de proyectos digitales
Programas executive	temas de ON/OFF Trade	Blockchain, Realidad aumentada	data y marketing
Cursos de actualización sobre gamification	Clouding	medio ambiente, renovables...	Temas de management, estrategia comercial
Innovacion financiera, Social Economy	CYBERSEGURIDAD	SEO	postgrados en gerencia, internacionales
PRACTICAS DE EMPRESAS	Programas enfocados a La Salud	Economia, enfocada en los retos actuales	product managers
área de empresas familiares	De inteligencia artificial	TIC	Más formación en el campo audiovisual
Data para managers no para técnicos	Caso práctico en equipo	Networking	relaciones laborales en España
INVESTIGACIÓN DE MERCADOS	Lo veo muy completo quizas algo de IOT	Más variedad en finanzas.	Realizar masters en inglés.
Minograficos presenciales	ciencias de la salud en el entorno digital	UX Transformación Digital Inbound Marketing	finanzas emprendedores
Estrategia de Negocios	como consolidar emprendimientos		

Appendix

Why do you think the course is overpriced?

Why do you think the course is overpriced?
Yo lo hice porque me lo pagó la empresa. Pero pagarla yo es impensable. Después, una vez hecho... considero que está un poco sobrevalorado. Podría costar la mitad perfectamente.
Creo que es muy mejorable en aspectos que ya he comentado
Contenidos demasiado básicos
por la calidad del contenido
Porque la educación no es de calidad
Debe de ser más accesible y contar con más apoyo de empresas.
He realizado un master previo en la UOC y la calidad de los materiales era muy superior, y el master costó 2.000\20AC menos que este con un menor nivel de descuentos y requisitos. Precio original aprox. 5000\20AC frente a este de 8.500\20AC.
La calidad del programa en general me parece decepcionante. Los vídeos, en su gran mayoría, son muy aburridos, poco didácticos. Salvo alguna excepción en todo el programa, los profesores en los vídeos no tienen una metodología de enseñanza, o eso parece. Los 'debates' se convirtieron en respuestas directas al profesor, no sentía que ese incentivarla la participación para considerarlo debate. Hace poco tomé un curso en Crehana, plataforma de enseñanza online, y la calidad de los vídeos y la forma en que lo explicaban era mucho mejor que varios de los vídeos que vi en el post grado.
Porque creo que la calidad del curso no fue adecuado en general. Por lo que creo que antes de cobrar por estos programas formativos se debería: - Profesionalizar la formación. - exigir a los profesores que mejoren y actualicen la calidad de sus contenidos. - Revalorar el tiempo que se dedica a cosas que no sirven para nada y que te exigen y emplearlo en hacer cosas que realmente ayuden a aprender. - Exigir a los profesores que se cercioren de enseñar a los alumnos. Tuve una duda con un tema y el profesor dejó la conversación a medias. No aprendí nada... - Menos texto y más enseñar cosas concretas.
He aprendido más con blogs de internet
Bajo nivel de contenidos para ser un Executive Master. Contenidos desactualizados. Contenidos repetitivos.
Mala calidad, grabar una clase desde una mala webcam para un experto de marketing no se me hace algo de 'calidad'
Por todo lo anteriormente comentado. No tanto sobre el programa formativo (mejorable técnicamente, y, sobre todo, a nivel de práctica con aplicaciones de gestión), sino por todo el coste que conlleva cada solicitud (certificados de notas, de planes de estudios, de apostillamiento, de planes de estudios con respecto a la Universidad a la que derivan al alumno pese a cursar el master con IEBS)... El área de gestión administrativa-atención al alumno es muy deficiente
Considerando una hora de lectura semanal y 30 minutos de práctica lo veo muy poco para el precio que se cobra. Sin contar con el tiempo que tardaban algunos profesores en corregir.
Lo dicho anteriormente. He tenido una experiencia poco satisfactoria. Mala calidad audiovisual. Falta de nexo, cada profesor da su módulo y punto. No repetiría.
Por la calidad de los materiales. Hechos de andar por casa, no de una academia que pretende ser de prestigio entre profesionales.
